ERIE SPECIALTY CO., ERIE, PA., U.S.A.

If it is a Food Chopper Without a Lid, Don't Buy It.

A distinguishing and exclusive feature of the STAR FOOD CHOPPER is a plate hinged at the top of the hopper which, when pressed on the food to be cut, forces it upon the feed screw, thus preventing the possibility of injuring or soiling the fingers, which is liable to occur in using the other choppers.

The STAR is unquestionably the best machine of its kind ever offered to the public. It will cut without crushing raw or cooked meat, sea food, fruit, vegetables, etc., into coarse or fine pieces, according to the cutter used, of which three accompany each chopper.

It has eliminated all the objectionable features of other choppers, and has added several improve-

It has eliminated all the objectionable features of other choppers, and has added several improvements that are distinctly its own. It is always in order, and the knives require no sharpening.

No other chopper has the many merits of the STAR. None is more simple in construction or easier to understand or clean. From start to finish in the small points as well as in the large, the STAR FOOD CHOPPER is the best.

CARVING KNIVES and FORKS, TABLE CUTLERY, SCISSORS,

RAZORS, HUNTING and BOWIE KNIYFS POCKET CUTLERY, &c.

Is among the oldest, and now over 200 YEARS old. It is known the world over as a guarantee that all articles so stamped are absolutely superior to all others.

We are the sole agents in the United States for JOSEPH RODGERS & Sons and carry a full line of their manufactures in stock.

If you cannot procure goods of their make from your jobber we shall be pleased to supply full information on application.

ALFRED FIELD & CO.,
93 Chambers Street, New York.

THE BEST ROTARY **WASHING MACHINE?** BECAUSE

1.—It is the only Rotary washer that has Revolving
Steel Ball Gearing, reducing the friction and
thus making machine so light running and
almost noiseless.

2.—The tub is made of Louisiana Red Cypress Lumber,
cherry finish; the legs are solid with tub (not
removable, breakable legs fastened with screws).

3.—The wheel turns right or left, pin wheel or dasher
reverses automatically, turning the clothes back
and forth through the hot soap-suds, and cleaning
them without rubbing them to pieces.

4.—This washer is made by experienced machanics, and
will out-last any other washer on the market.

5.—The tubhasa wringer box fastened with steel brackets.

6.—The lid on tub closes tight, no escape of steam.

Manufactured by H. F. BRAMMER MFG. CO. DAVENPORT, IOWA.

Blake Lamb Traps. Lightest and Strongest Made. For 40 years the favorite wherever used. Send for catalogue to the HAWKINS CO., Successors,

No. 2 weighs 5 lbs. and lifts 1500 lbs. Adjustable.

That is, they are low in price, BUT they do the work.

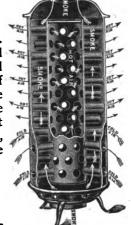

GEM WIRE No. 1.

IS IT SO?

It is said that a tea-kettle will boil quickest on top of a chimney. However that may be, all agree that there is too much heat wasted there. Nothing but the cross tube ROCHESTER RADIATOR has ever trapped it. If you were to heat a poker, would you hold it at the side of the flame or over the top? Or would you cook food on the side of a cook-stove in preference to the top? It is thus with the ROCHESTER RADIATOR which takes the heat from the top of the current and not from the side. The cross tubes cool the hot current, just as you would blow across a cup of tea to cool it, only there are from 96 to 120 such currents in operation.

ROCHESTER RADIATOR CO.,

150 Furnace Street.

I CONTROL OF THE SANGE OF THE S

THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior quality—ensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

The checking medium is an oil which is practically non-freezing, and which can readily be renewed when needed without removing the check from the door.

HARDWARE

At a recent meeting of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership therein:

Clarence K. Arnold, Philadelphia, Pa. Samuel P. Colt, Providence, R. I. Albert S. Marten, Newark, N. J.

.

John J. Tower, of Tower & Lyon, 95 Chambers Street, New York, who, accompanied by his family, has been abroad since July 6th, returned on the Manitou on the 24th ult., having had a most agreeable vacation abroad, the greater part of which was pleasurably spent in England, Scotland, Switzerland and the Netherlands, including Germany and France for shorter periods. Mr. Tower devoted some of his time studying the business outlook in Europe for the future distribution of the many useful lines of specialties with the manufacture and sale of which his house has for so many years been prosperously identified. He found a more favorable condition than ever existing for the adoption and sale abroad of the many labor-saving devices controlled by his firm, and anticipates in the near future an increased demand for such high-grade goods.

The monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, on Wednesday, October 9th, at 5 o'clock P. M., dinner being served at 5:15. At the business meeting taking place immediately after the dinner, the Association had the pleasure of entertaining His Honor, the Mayor, Thomas N. Hart, who made an interesting address upon topics concerning Boston and its commercial interests. There were present as guests several of the oldest Hardwaremen of this city, some of whom in their remarks spoke about the trade in their early experience. The enjoyable entertainment was arranged by the Executive Committee. A quartette of trombones from the Lynn Cadet Band furnished occasional music during the evening. The address of the secretary is James A. Farless, 46 Oliver Street, Boston.

Charles S. Lawrence, representing Tower & Lyon, 95 Chambers Street, New York, took his departure on the steamer *Philadelphia* on October 2d, to devote a number of weeks among the chief cities of Great Britain, establishing direct representation in the interest of the firm he represents. He was accompanied by N. D. Holbrook, of the Union Hardware Co., Torrington, Conn., whose entire production is marketed by Tower & Lyon in addition to the several important lines controlled by them. The interests being mutual, these representatives are sent abroad to foster and encourage closer relations with the manufactures of the companies referred to, opportunity for the accomplishment of which being among the noted commercial advantages observed by Mr. Tower when abroad recently on a pleasure trip.

The value to shipping interests of wireless telegraphy was proved last week by the Cunard steamer *Lucania*, which, in her passage from New York to Liverpool, passed the steamer *Campania* of the same line coming in the other direction. Communication was enabled to be maintained between the two vessels in mid ocean for over two hours by means of their wireless telegraph instruments. The shortest distance in which communication was effected was 33 miles and the longest 65 miles. A number of messages were exchanged.

Not content with their first purchase, in point of variety and quantity, the Z. C. Miles & Piper Co., of Seattle, Wash., have doubled their order for Patent Hardware Shelving, with a telegraphic order for twenty-five additional Cabinets and Bases, of the Warren make. This far Western Hardware house will soon boast of a store second to none in that territory.

The Marlin Fire Arms Co. have well under way a new four-story brick addition about 115 feet long and about 50 feet wide. It is expected that it will be completed and ready for occupancy early in 1902 and will give an addition to their plant of about 20,000 square feet of floor surface. This will enable them to add to their output next season and serve their customers more promptly than ever before.

At the National Hardware Jobbers' Association meeting in Cleveland this week, here and there around the office and meeting rooms, were groups of members earnestly discussing what appeared to them as an interesting subject: "How good goods could be sold so low, was a marvel—" "patterns, quality and finish all, were admitted as superlative—" "that the possession of this line by a Jobber, stamped him as a discriminating purchaser—" that "having this line aided their traveling salesmen in selling other lines and to the better class of retailers—" "besides, as the factory makes a full, complete assortment of Steel Goods and Snaths and Cradles as well, it is a decided convenience to the buyer to purchase 'Fort Madison Goods,' made by The Iowa Farming Tool Co."

"Boiled" Linseed Oil.

There are three methods employed in producing "boiled" oil. The first consists in boiling the oil at a temperature varying from 450 to 500 degrees Fahrenheit with red lead and litharge in the proper proportions.

The second method consists in simply mixing raw linseed oil at a moderate temperature with more or less proportion of a consensitated solution of lead and manganese-linoleate.

The third process consists in incorporating the oxidizing agent of the metallic oxides in the oil, under the action of steam host.

The first method produces the kettle-boiled oil.

The second method produces what is known as "bung-hole" oil.

The third method produces what is known in the trade as "steam-boiled" linseed oil.

When the oil is extracted from the seed, whether by pressure or the volatile solvent process, it is not only the pure linolein that is squeezed out or is separated from the seed, but also the substance that is called the mucilage and various other substances, and these all exist in freshly-made linseed oil.

In the kettle-boiled oil where the temperature, as mentioned in first paragraph, is from 450 to 500 degrees Fahrenheit, the mucilaginous and other undesirable matter rises to the top of the oil and is skimmed off.

In the "bung-hole" process all of the mucilaginous matter and the undesirable substances are retained in the oil to the detriment of its quality as a paint oil.

The third process mentioned, which produces steam-boiled oil, is a quicker and more economical way of turning out an oil purified by heat, but as the heat is seldom or never over 300 to 325, very much of the undesirable impurities are left in the oil, and the steam-boiled oil is therefore inferior to the kettle-boiled oil, and is sold at a less price than the genuine kettle-boiled oil.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The retail trade is reported by the travelers on the road as being in a good and satisfactory condition, with a demand from the consumer of the most encouraging kind. Supplementary orders are given with confidence. The Fall and Winter seasons being long and continuous, many are occupied with the usual preparations for a fine and profitable holiday trade, which the generally prosperous condition of the workmen in all lines of production, promises to prove of greater importance than at any previous time.

The jobbing trade are kept busy filling additional orders and are catching up on the numerous items on the back order book made necessary by previous insufficient supplies from manufacturing plants on account of the strike conditions prevailing.

Both jobbers and manufacturers have been giving considerable attention to the interesting Convention of the National Hardware Association which has flooded the beautiful city of Cleveland with active delegates representing both these important branches of our useful industry. The present indications point this out as one of the most enjoyable conventions this popular Association has been the means of bringing together. The bright and shining lights of each division of workers were on deck to lend a hand to bring their deliberations to a successful issue, and the report of the proceedings, which forms a large part of the contents of this issue of our paper, gives abundant evidence that no waning interest is noticeable in the necessity for this annual gathering of merchants and manufacturers in order to give every encouragement to mutual interest, sound principles, honest motives and integrity of purpose that should govern all commercial transactions.

A new feature was added to the interest given to the proceedings of the Convention by the call which was issued for the manufacturers present to consider the advisability of organizing a Hardware Manufacturers' Association. The advantages already gained by the jobbers and retailers in concerted action as affecting the interests of the manufacturers, make it desirable that a similar unanimity of purpose should be entertained and supported by the manufacturers. Possibly some of the demands of the several associations may occasionally be regarded as unreasonable, and if placed before a body whose interests are identical from a manufacturer's standpoint, they may be argued, entertained or rejected with a concert of action not otherwise obtainable. Anything in the nature of dictation could thus be resented, and a more judicious temper caused to prevail, in which justice to all interests might meet more favorable consideration. An Association of this kind was felt to be desirable from the growing number of large retailers who are ambitious of being considered as jobbers, consequent on the employment of a limited number of travelers to distribute their stock. With the knowledge gained by association, the motives of both divisions of the trade can be more thoroughly understood and appreciated, and the trade relations of each rendered more harmonious in the absence of any element savoring of dictation.

The Jumbo Jobbing House.

A movement to consolidate the jobbing interests of the country into one big concern or company with branches in the principal trade centres, has been agitated in several sections during the past month. A more impracticable or delusive scheme could scarcely have been promoted with so much seriousness.

If the object is to lessen the number of jobbing houses doing business, a number constantly increasing in an inverse ratio to a possible living profit, the very fact of a consolidation throwing out in the interest of economy a number of skilled salesmen whose services could be dispensed with, would of itself assist in the formation of smaller jobbing houses with light expenses, whose efforts to sell would naturally create conditions more antagonistic than prevail at present, and to whom the sympathy of the retailer would be largely extended. The competition which makes a movement of this kind assume any interest, does not lie so much in the competition between individual jobbers, perhaps, as the temptation among smaller manufacturers to market their products to the retail dealers direct from the factory, compelling the jobber to retain his already established trade by making cut prices to meet these quotations.

What's to become of the manufacturer when these Jumbo jobbers consolidate—those who make similar lines of goods such as steel goods, shovels, axes, horseshoes, etc.? As the consolidation of distributers, it is likely, cannot buy of all of these competing producers, won't they be apt to go foraging for trade on their own account, and leave the big consolidation to pare profits a little closer? From a jobber's standpoint, there are enough manufacturers now selling the retail trade direct. Will a Jumbo jobbing house as contemplated lessen it?

It would look to an outsider as though this plan was fostered and encouraged by some old timers in the trade, who fancy their present businesses can be disposed of for cash based on a valuation in which "good will" may be largely represented by a paper value. It has been a long time since any possible scale of actual profit has made "good will" a valuable asset. With the present antipathy to trust influences on the part of the people, a strong public sentiment would oppose this Jumbo consolidation at the outset, and which would grow antagonistic to its continuance as fast as other sources of supply were opened to the trade. There is as little likelihood of a consolidation like that proposed being consummated as there is of those embarking in the scheme finding a profit from the operations of so wild a project, if consolidation were possible.

Looking Back at the Steel Strike.

The steel strike which came to a close a fortnight ago was a labor trouble, says the Age of Steel, that at the outset threatened much damage to the industries involved. These industries were spinal in the welfare of the nation, and any disaster thereto would not fail to be less than a grave calamity. Some high keynotes were struck at the commencement of the trouble. Success for the strikers was a certainty. The Steel Trust was beaten at the first drum tap; but the screech subsided into a sneeze, with the snuff in the wrong nose. The strike collapsed and went to pieces. It started with a programme; it ended with a surrender. The causes leading thereto were manifold. Public opinion failed to wax warm in the matter; the support of the press was feeble and fractional; sympathy, as expressed in financial aid, was threadbare and poverty stricken; and the rally of other organizations was half-hearted and hesitant. Moreover, the Amalgamated was face to face with the most compact and powerful organization of its kind in the world. Nor were the employes a unit in the strike; some refused to go out owing to contracts to which they had pledged their honor while others had some troublesome doubts as to the wisdom and necessity of the trouble. There had been symptoms of vacillation in some stages of the strike among responsible leaders, and so it came to pass that the great steel strike, that threatened to surpass all others in the issues involved, practically did less. According to Pittsburgh estimates the cost of the trouble approximated a total of \$25,000,000, of which about \$10,000,000 is charged to the loss of wages—a heavy price to pay for a chalk egg.

The agreement arrived at between the American Tin Plate Company and the Amalgamated Association provides that the company reserves the right to hire or discharge any employe without reference to any connection with labor organizations; that non-union mills shall be represented as such, but that old charters can be retained by such men as desire to do so; also that no prejudice shall be held against any workmen by reason of their membership in the Amalgamated Association. Furthermore, this agreement is to remain in force for a period of three years dating from July 1, last. This clause, however, is subject to the vote of the tin-plate workers.

This strike has not been without its lessons. It points to the urgent need of wise and capable leadership on the part of labor unions-men of brains, conscience and force. It also shows that corporate capital has to deal with organized labor, and while not compelled to be a catspaw to the same, has to recognize its existence, influence and increasing importance. The peaceful character of the strike in which violence was at a discount, is an evidence of a departure from the age of bludgeons and broken heads. There has been no re-enactment of the Homestead tragedy or of the scenes in Cincinnati, Pittsburgh and Chicago. Official advice and instruction in this matter were plain spoken and emphatic. The leaders of the strike put their foot on the brickbat, and whatever mistakes they may have made, they made none in this. This can be repeated in all future cases of trouble, should such arise. This is on a line with the idea of peaceful arbitration of disputed questions. So far, so good. Again, the issue of the struggle is evidence of the fact that no body of men, corporate or unionized, can stay the tide of national prosperity. The sea rolls over the clams. There is no possible upsetting of the industrial fabric. It is granite-ribbed; the country is moving upwards and outwards, and it can never be by fiat or reprisal that the industries of the United States will be stampeded by any one or more organizations—no matter whether on the side of corporate or labor unions.

Ames Shovel & Tool Co.

At a meeting recently held by the directors of the Ames Shovel & Tool Co., the organization was completed by the election of the following officers: Hobart Ames, president; W. J. Alford, vice-president; W. H. Ames, secretary; Oliver W. Mink, treasurer.

The Executive Committee is constituted as follows: W. J. Alford, Hobart Ames, Oliver Ames, W. H. Ames, Oliver W. Mink and C. H. Myers. The directors are as follows: W. J. Alford, Wright Shovel Co.; Hobart Ames, Oliver Ames, W. H. Ames, Oliver W. Mink, Oliver Ames & Sons Corporation; J. C. Birge, St. Louis Shovel Co.; C. H. Myers, H. M. Myers Co.; Howard Rowland, T. Rowland's Sons.

Although the Ames Shovel & Tool Co. will be a proprietary company, owning the different plants, it is understood that the constituent companies will continue to carry on business in their own name, operating plants, selling goods, etc., so that their relation with the Shovel Association will remain unchanged.

Things Better Left Unsaid.

According to an exchange, this is a prolific subject upon which one might dilate indefinitely. Certainly there is nothing more detrimental to pleasant and satisfactory business relations than the unfortunate habit of making malapropos remarks and writing uncalled-for letters.

Every one is more or less liable to acquire this habit. It is, however, a propensity which may be overcome if properly treated. In business this habit is particularly dangerous and always apt to get the perpetrator of it into trouble.

The whole science of living and doing business is involved in knowing what to say and what to leave unsaid.

Telephone Courtesy.

It is hard to see why one should not receive the same courtesy, and attention whether he presents himself indirectly by the religious or actually in the body at his correspondent's place of business. Too little attention has been given to the employment of clerks to answer the telephone, and many employers have apparently forgotten that the telephone is an open door and there it should be guarded by a person of intelligence, discretion and good manners.—Electrical Review.

Certified Checks.

When the holder of a check takes it to the bank upon which it is drawn and has it certified, the certification imports that the drawer has sufficient funds on deposit with the bank to pay the check, that these funds are to be immediately set apart for its satisfaction, and that the amount for which the check was drawn will be paid upon its presentation. The moment the check is certified the drawer is released and the bank becomes the only debtor. Under the decisions in New York State certification does not warrant the genuineness of any part of the check except the signature. If the signature is a forgery, the bank that certified the check must pay it, notwithstanding that fact; but if the amount has been raised before certification, the certifying bank cannot be compelled to pay the increased amount, but only that for which the check was originally drawn.

Jones—Has your wife got her new Fall hat yet?

Brown—No; I've given her the money for it several times; but she has spent it on some great, glorious bargain she saw before she got to the milliner shop.—Ex.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

False Imprisonment.

QUESTION: Some time ago I borrowed \$50 from a person who was then a friend of mine. The debt ran on for a considerable space of time and my friend and I had a quarrel, whereupon he at once demanded that I pay him the \$50. I was at that time in a room in his house, and I told him that I would pay the \$50 as soon as it was possible for me to do so. He insisted that it should be paid then and there. This I refused to do, and he arose from his seat, locked the door, put the key in his pocket, and declared that I should not leave the house until I had paid the debt. He kept me in this room, he being on the outside, for about six or eight hours, and then the door was unlocked by some one else. Kindly inform me whether I have any redress for such action as this.

REPLY: The action on the part of your former friend, as described by you, constitutes a false imprisonment. In order that a person may be falsely imprisoned, it is not necessary that he should be taken to a jail or that he should be confined on legal process. It is sufficient that he be unlawfully restrained of his liberty. You would, therefore, have a cause of action against your former friend in which action you would recover whatever damages, within the bounds of reason, which the jury chose to allow you.

Powers of Committee of an Incompetent.

QUESTION: About five years ago my brother met with an accident, as a result of which he became partially insane and incapable of attending to his own affairs. He had considerable property at this time and another brother of his had himself appointed as a committee to look after the affairs of the incompetent. About two months ago the brother for whom the committee had been appointed died. I should like to be informed as to what the distribution of his estate will be, and as to whether or not the brother who was appointed as his committee will on that account receive all of his property?

REPLY: Upon the death of an incompetent person for whom a committee has been appointed, the powers of the committee over the estate of the incompetent cease. The Code of Civil Procedure also provides that upon the death of an incompetent, his estate must be administered as though no committee had ever been appointed: The biother who was appointed as the committee would not, therefore, necessarily be entitled to administer the estate, and would only receive his distributive share in your incompetent brother's property. Brothers of a deceased person have an equal light to letters of administration, and the one first obtaining them would be the proper administrator of the estate.

Married Woman's Right to Dispose of Equity in Property.

QUESTION: Kindly answer the following question through your legal column. Can a married woman in New York State dispose of whatever interest she may have in property situated in New York State, upon which there is a mortgage, without the consent of her husband?

REPLY: In New York State a married woman owning real property upon which there is a mortgage may, without the consent of her husband, convey her interest which is called her equity of redemption in the premises. In New Jersey, however, and in some other States which are called common law States, it is necessary when a married woman wishes to convey her real property to have her husband join in the deed. The reason of this is that in most States of the Union, under certain circumstances, a husband is entitled to what is known as an estate by courtesy, which corresponds to the dower estate which a wife has in her husband's property. In States such as New Jersey, a married woman cannot defeat her husband's courtesy without his consent, and for this reason her husband must join in her deed to convey a clear title. This is not necessary in New York State, for the reason that a married woman may defeat her husband's courtesy either by deed or will, without his consent.

Perfecting Title to Real Estate in New York and New Jersey.

QUESTION: About a year ago my father died leaving some property in New York State and also in New Jersey. At the time of his death my father lived in New York County; he owned some property in Westchester County and Kings County and also had some pieces in New Jersey. By his will he left me all this property. He had certain personal property in New York County, and I was told for this reason it would be necessary to probate his will in New York County, which was done. Kindly inform me whether it is necessary for me to do anything as to the property in Westchester and Kings County and in New Jersey, in order that I may be able to sell the property?

REPLY: When a man dies owning property in various counties of this State and his will is admitted to probate by the surrogate of the county in which he lived and died, it is necessary, under Section 2,633 of the Code of Civil Procedure, to file an exemplified copy of the will in the county where the real estate is situated. This should be done by the executor of the estate within twenty days after letters testamentary have been issued. A somewhat similar provision is required by the New Jersey statutes, and it is necessary to file exemplified copies not only of the will, but of the proofs taken upon the probate in the county where the property in New Jersey is situated. In this way the title to these various pieces of property is perfected and a clear title to the same may be given.

Confidence Between Creditor and Debtor.

Many merchants seem to think that a request for a statement of their financial condition when they have placed an order and are expecting it filled on credit, though they may not say so at the time, is a deadly insult and a slur on their responsibility and business integrity. Perhaps it is from their standpoint, knowing of their own good condition; but how is the creditor to know that until he has been informed, and generally the only reason why he is not is because the debtor has already refused to tell the agencies or any one else anything about himself, thereby leaving open only one course to the creditor, that of asking for the information necessary to the extension of credit. It is not nearly such a blot on a man's reputation to receive a request for such details as it is to get turned down, and frequently he would be if he did not put a little confidence in the creditor for the sake of the large amount of confidence he expects the creditor to place in him in return therefor.

If the debtor cannot trust the creditor with a little information, how can he expect the creditor to trust him with his dollars, his capital and his whole success which depends upon the safe investment of his money in the form of merchandise. As a rule, the people refusing statements are the ones not deserving of credit, but they never will be if they don't try to establish it by honest dealings, if not by financial responsibility, which in time will increase with honest efforts and endeavor.

Many there are, however, who decline to show up their assets because they know they are all right and expect every one else to, and feel offended because they don't; but how can they if they are unable to secure any information, either indirect or otherwise?

The foundation stone of credit is confidence, for without it credit is impossible. The necessity of credit and its relation to success is shown by the fact that 90 per cent. of the business of the world is done on credit, the exercise of which secures the benefits of increased capital and volume of trade. Confidence can be best established by a full, frank and honest showing of the financial condition of the prospective creditor, for accurate and impartial representations cannot be expected through indirect sources. A request for such a showing is not a reflection or attack upon integrity, reputation or ability, but a tribute to it, since sufficient confidence is reposed in the receiver of credit to rely upon his statement, which is the only road to the true and unbiased information necessary to conduct business intelligently and equitably.

J. A. Shaw.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interests to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS ISSUED SEPTEMBER, 1901.

683,033. Spirit Level, E. D. Frederick, Avalon, Pa.

683,097. WEATHER STRIP AND SASH FASTENER, Frank Allen, Memphis, Tenn.

683,105. SHEARS OR SCISSORS, Patrice Desnoyers, Magog, Canada.

683,221. Shutter Worker, H. Osborne, assignor to Novelty Blind Operator Co., Springfield, Mass.

683,231. Scissors, Cuno Stamm, Ohligs, Germany.

683,290. LIFTING JACK, J. A. Johnson, Hoquiam, Wash.

683,317. Hose Nozzle, J. McBoyle, Oakland, Cal. PATENTS EXPIRED SEPTEMBER 23, 1901.

305,421. LIFTING JACK, H. H. Brown, Ladoga, Wis.

805,426. Door Knob Attachment, J. K. Clark, Buffalo, N. Y.

305,602. BENCH PLANE, J. A. Keiser, Cincinnati, Ohio. PATENTS EXPIRED SEPT. 30, 1901.

305,743. Door Hanger, W. B. Cogger, H. A. Hamlin, Minneapolis, Minn.

305,749. REFLECTOR, C. J. Higgins, Farmingdale, Me.

305,783. Sash-Holder, T. A. Bereman, Mount Pleasant, Iowa.

305,805. Coffee-Boiler, J. Dyer, St. Louis, Mo.

305,837. ROLLER SKATE, J. Morss, Medford, Mass., assignor to A. B. Morss, same place.

305,878. WHEELBARROW, J. Annin, Brooklyn, N. Y.

305,379. WHEELBARROW, J. Annin, Brooklyn, N. Y.

305,961. WRENCH, H. Reber, St. Louis, Mo., assignor of one-half to Wm. Edenborn, same place.

PATENTS ISSUED OCT. 1, 1901.

683,438. Window Sash Tightener, O. Chils, Brooklyn, N. Y.

683,457. CLOTH HOLDING ATTACHMENT FOR SHEARS, D. S. Flowers, Garner, Iowa.

683,645. ROTARY LAWN SPRINKLER, H. Gibbs, Chicago, Ill., assignor to W. D. Allen Mfg. Co., same place.

683,646. LAWN SPRINKLER, H. Gibbs, Chicago, Ill., assignor to W. D. Allen Mfg. Co., same place.

683,643. SINK BRUSH, C. A. Fogarty, New York, N. Y. 683,716. Parallel Working Pliers, H. C. Weibzahl, New

York, N. Y.

Bestosking Packing and Supply Co.

We take pleasure in referring our many readers and advertisers to the advertisement of the Bestosking Packing and Supply Co., which appears on page 29 of this issue. company is located at 170 Summer Street, Boston, and is the sole United States branch for Turner Bros., Ltd., of Rochdale, England, which concern is recognized as one of the most representative makers of asbestos goods, packings, jointings, non-conducting materials, etc., in the world. The original and famous Fire Fly packing, which is one of their great specialties, has won for itself a very enviable reputation abroad after many severe and very gratifying tests, and American users of this make of goods have already furnished a number of very flattering testimonials. Their line is very complete, and includes a large variety, both square, round and in sheets. We take much pleasure in recommending to steam users this concern. Among the specialties handled by them may be found a full line of rubber belting, camel's hair belting of a very superior grade, and the well-known "Gripwell" brand of belt dressing. Hardware dealers desiring to handle a fine grade of goods of this character would serve their own interests well by communicating with the Bestosking Packing and Supply Co., at the above address.

Hydro Carbon (Gasolene) Lamps.

While it is essential that a hydro carbon (gasolene) lamp should be manufactured of the best material and of the highest grade of workmanship, these features would be utterly useless if the mechanical principles of the burner were defective.

A good hydro carbon burner should be so made as to perfectly vaporize all the gasolene that flows into it, irrespective of draughts or extremely low temperature, and properly control and mix this vapor so as to produce a steady, brilliant light.

Simplicity of construction is also important, for not only does this reduce the possibility of the lamp getting out of order, but also permits the burner to be readily cleaned, if impurities in the gasolene should accumulate in the vapor channels.

A gasolene vapor lamp made by skilled labor, of proper material and with a burner properly constructed, will give—provided a genuine Welsbach gasolene mantle is used—a light equal to that of 100 cándles, at a cost of less than 1-5 of a cent per hour.

It is safe to assume that 90 per cent. of the dissatisfaction arising from the use of gasolene lamps is due to their cheap and faulty construction.

If the purchasers of these lamps had confined themselves to lamps manufactured by responsible and reliable concerns, they would have unquestionably found this method of artificial lighting all that is claimed for it in economy, convenience and efficiency.

On another page of this issue appears the unique and attractive advertisement of the Welsbach Co., who are placing on the market a full line of these lamps, which they not only guarantee as to material, workmanship and perfection of mechanical construction, but are selling at prices less than those asked by many manufacturers for lamps of inferior quality.

Those interested in solving the problem of cheap illumination or the handling of a gasolene lamp that they can unreservedly recommend to their trade, should certainly write to the Welsbach Co. for their catalogue and price list containing illustrations and full description of these goods.

Providence Postage Stamps.

"Here is something that many of our citizens know very little about," said Mr. Calder, of Providence, Secretary of the Rhode Island Philatelic Society, to a Journal reporter, as he took from its hiding place a well-worn envelope containing a thin sheet of paper about three inches square. It was a sheet of the old Providence city postage stamps, which were used by permission of the National Government of 1846, before the days when that business became the sole privilege of the Federal Government. It is somewhat of a curiosity. The sheet contains eleven 5-cent stamps for city postage and one 10-cent stamp for outside the city. The stamps have rather a crude and time-worn appearance, being printed in a black ink of a tint suggestive of a faded, poor quality writing fluid. "How much is the sheet worth?" asked the reporter. "I want \$50 for it," replied Mr. Calder. "There are very few of those unused sheets out, and they are extremely valuable. I only know of four other sheets in this city."—Albany Journal.

Comparisons.

Mrs. Selldom-Holme—My husband is one of the most disputatious mortals alive. I can hardly ever make a statement without his "begging leave to differ."

Mrs. Jenner Lee Ondego—Your husband is an angel. Mine always differs without begging leave.—Ex.

.

Don't borrow money, an' you won't hev to cross the street so often.

The Manufacture of Fire Brick.

Various processes and labor-saving Machines employed in a modern well-equipped plant.

The manufacture of fire brick has long received a great deal of attention in western Pennsylvania and throughout the steel-making districts of the United States owing to the steady demand for such brick for the many coke ovens in these regions. A description of one of the plants engaged in making this type of fire brick that appeared recently in a technical contemporary is of general interest owing to the numerous ingenious methods and machines employed. The clay is blasted with dynamite and powder, preferably the former, as it loosens the blocks designed to come down without blowing the clay in all directions. The clay is loaded into small cars, which travel over a trestle across a creek to the plant. The ears have drop bottoms, and run directly over a chute, leading down into the grinding pans, two in number. The main chute branches, so that the clay can be let into one, the other, or both at the same time. The dry pans are nine feet each in diameter. From the pans the ground clay goes up an elevator 30 feet long. This is made of a traveling belt, on which are steel buckets, $5\frac{1}{2}$ x 10 inches in size. The elevator carrier drops the ground clay on the screens, which are of the regular galvanized gravity pattern, the mesh being regulated according to the make of clay to be turned out on the run. From the screen the clay travels automatically through a chute to the brick-making machines. When stiff mud bricks are being made the clay goes into a special machine having a capacity of 50,000 bricks a day. Connected with this machine is an automatic cutter which cuts the bricks on a carrying belt as they emerge. The belt then separates the bricks and carries them further where they are taken by handy workmen and loaded on trucks which travel to the transfer, and from the transfer the cars of bricks are run into the tunnels of the dryer at will.

The bricks remain in the tunnel on the cars about 12 hours. As green bricks are added in front of the tunnel, the dry bricks are pushed out towards the rear of each tunnel, and each day are taken out of the rear, where there is another transfer track running parallel with the rear end of the dryer, and also parallel with the face of each of the kilns. The tunnels have a drying capacity of 50,000 bricks per day. Over the top of the drying tunnels there is a large floor space on which special shapes, that is, large shapes, including tunnel for coke ovens, fronts, jams, etc., are dried. It requires from one to two weeks for drying these special shapes. Sometimes this operation is one of the most delicate in the manufacture of fire bricks.

To resume the operation of the manufacture of bricks, when they are placed in one or the other of the kilns, of which there are six, each with a capacity of 80,000 bricks, they are burned for five days and five nights. The secrets of burning are said to have been solved after years of trial and study and the expenditure of much money.

The bricks, after being burned, are taken out of a door in the rear of the kilns and loaded directly into the railroad cars on a siding which is parallel with the rear alignment of the kilns and three feet from it. It is thus seen that the operation of the manufacture from the clay bank till the loading for shipment is continuous, and no brick is carried a foot farther, either by hand or machinery, than is absolutely necessary to give the plant its capacity and the machinery its room for operation.

When soft mud bricks are made the screened clay or silica rock is run into a different machine, which also has a capacity of 50,000 bricks per day. When the bricks emerge from this they are in groups of five and are dumped from the molds on pallets, which are loaded on the trucks and carried into the tunnels, where the operations are similar to those previously described.—American Exporter.

Increased Interest in Roller Polo.

With the approach of cooler weather, indications plainly point to a greatly increased interest in roller skating, closely connected with which, is the popular and intensely exciting indoor, Winter athletic amusement, or roller polo, which is worthy of the place it has secured in the estimation of supporters of national athletic sports, such as baseball, football, hockey and cricket, and now that the fine points and high order of the game are fully understood, it is esteemed by many as superior to outdoor athletic contests, inasmuch that it requires not only strength and agility, but great skill, and the game being continuous and rapid, it can be readily understood how absorbing is the interest shown by spectators, and why it attracts such great crowds, and has fixed itself as a permanent sport in this country. The attendance at the contests for national polo championship last Fall, during the athletic meet at Chicago (in which the famous Henley polo team, of Richmond, Ind.), was victorious, fully demonstrated its popularity, as over 50,000 people witnessed the four games. Most of the new skating rinks will have polo teams this Winter, and M. C. Henley, one of the leading roller skate manufacturers of the world, widely known for the past 20 years as manufacturer of the Henley Club and Rink Roller Skates, and later on, of the Improved Ball Bearing Roller Skates, reports great activity, even this early in the season, in the roller skate trade, and has supplied recently, complete outfit of polo and skate goods for several new rinks, and has many more in prospect. He states that rink managers generally made big money last year, and that many new rinks will be started this season. Mr. Henley is not only a successful manufacturer of roller skates, but has been identified with roller polo interests since its inception, and has had a winning team for 19 years past. Last Winter they won all the trophies offered for championship contests, and this year are in the field stronger than ever, and ready to contest for the prizes that will be offered by the different polo leagues lately formed. Mr. Henley's large factory at Richmond, Ind., is headquarters not only for the various styles of roller skates, but for all latest regulation polo goods.

The Beneficial Effects of Combination.

In these days of combinations of great commercial interests and talents, attention should not be lacking to the youngest and probably the most promising offspring in the family of Capital. We refer to the American Can Co., of New Jersey, comprising within its folds all that is best among its 118 constituent companies. Formed during the late Spring of the current year, it stands to-day, in the first half-year of its existence, completely organized in its several departments, equal to its great task of meeting the demands of its myriads of clients in the multitude of their various requirements, a vigorous aspirant for the world's trade in its especial field of industrial development. With perfectly equipped factories in the most important commercial centres of the country, immediate attention and promptest deliveries are vouchsafed, doing away with the provoking delays of older days when each factory was a separate organization, and at times so rushed and crowded as to unavoidably inconvenience the customer. Under the present system of community of interest, orders are placed nearest to buyer's point or at some point where prompt service can be most easily obtained. One of the greatest, if not entirely the greatest benefit accruing to the buyer from the combination of these great can-making interests, is the absolute protection given him in the price he pays. He now knows that he is buying his cans as cheaply as his competitor, and that he need not feel uneasy that his competitors are enjoying an advantage that is not for him, the interests of all being alike protected. The American Can Co. is, therefore, formed in the interest of the buyer, as well as in the interest of the seller, and where advantages are reciprocal, the beneficial effects of combination are sure to grow and advance in importance as the markets of the world broaden and its field of activity becomes unconfined.

CONSULAR COMMERCIAL COMMENTS.

GERMAN DUTY ON EMERY WHEELS.

Consul-General Mason writes from Berlin, August 16, 1901:

It will interest certain exporters of machine-shop appliances from the United States to know that a recent decision of the imperial German customs office re-classifies emery wheels, and doubles the duty hitherto levied on that class of imports. German-made emery wheels are usually manufactured of pure corundum, the hole which is pierced through the center of the disk fitting round the shaft or spindle without any metallic support. As a consequence, it happens that that such a wheel sometimes works loose on the shaft as a result of disintegration from vibration. To prevent this, American manufacturers of emery wheels are accustomed to line, or "bush," the central orifice with Babbitt metal, iron, or some other metal that will give a firm seat to the shaft. Hitherto these "bushings" have been generally covered with a label bearing the name of the maker, size, number, etc., and the metallic portion thereby concealed. Recently, however, this has been discovered, with the result that emery wheels so provided with bushings are classified for duty as metal in combination with corundum (Schmirgel), which increases the rate from 3 marks to 6 marks (\$1.42) per 100 kilograms. This rate will not seriously affect the trade in the smaller sizes of wheels, but as they are made and used in all diameters up to 3 feet, the increased duty will have a tangible effect on the net cost of the larger sizes.

MATCHES IN THE NETHERLANDS.

Consul Hill, of Amsterdam, August 1, 1901, says:

There is a good chance for the introduction of American matches into the Netherlands. At present, the cheaper grades are imported from Belgium. A better quality, however, is furnished by Sweden. The wholesale prices are as follows: White wood with brown heads, 36 florins (\$14.47) per case; white wood with red heads, 38 florins (\$15.28) per case; white wood with yellow heads, 45 florins (18.09) per case. A case consists of 20 packages, each package containing 50 smaller ones of 10 boxes each. Each box is 2½ by 1½ by ¾ inches, and contains about 75 matches. The import duty is 5 per cent. ad valorem.

THE HALLE-MERSEBURG ELECTRIC RAILROAD.

Consul Warner reports from Leipzig, July 27, 1901, that work has been begun on the electric railroad between Halle and Merseburg, permission for the construction of which was granted by the Prussian Government several months ago. It is expected that the Halle-Ammendorf section will be completed before the beginning of Winter. The total length will be 10 miles. Power will be obtained from the River Saale. The consul also states that the projected electric railroad between Leipzig and Halle has been abandoned, the Prussian and Saxon governments having refused to grant the necessary franchises.

IRON SANDS OF GUADELOUPE.

Consul Ayme, of Guadeloupe, under date of August 13, 1901, reports that, according to a decree recently published in the *Journal Officiel*, a concession for the exploitation of the iron sands of the colony has been granted to Mr. N. de La Ronciere, merchant and president of the chamber of commerce of Pointe a Pitre. The consul adds:

These sands are found at many places along the coast in vast beds. The quantity in sight and immediately available is estimated at some 200,000 tons. It is a very pure magnetic

iron sand, free from impurities, and yielding about 67 per cent. of iron. This iron is said to give a superior quality of steel. This consulate has been in receipt of several letters asking for particulars regarding these iron-sand deposits, but it has heretofore been the policy of the government of the colony to forbid the working of them. Practically unlimited quantities can be furnished, and vessels can be loaded very speedily and safely. All persons interested should write either in English or French to Mr. Numa de La Ronciere, Pointe a Pitre, Guadeloupe, or to the American Exchange, same city.

NOTES FROM NICARAGUA.

The following has been received from Consular Agent Manning, of Matagalpa:

I would call the attention of our exporters to certain things that have come under my observation. The principal merchants here are European, but the large American colony has demanded that they import certain United States goods, wishing better quality than is usual in European articles of the same class. To satisfy this demand, one of the heaviest importers here sent a trial order to a house in San Francisco. Imagine his surprise to find that a number of the articles shipped him bore such mottoes as "Made in Germany," "Made in France," "All English labor employed," etc. This importer is an Englishman, and imports everything he can from England and many things from Germany and France direct, and these same articles would have come to him in this way, less American duties and other charges, therefore much more cheaply. Among the goods were corkscrews, screw-drivers, pocketknives, seissors, etc. I think our wholesalers should understand that when orders are sent from Spanish America, it is with a view to securing United States articles. If Nicaragua duties on ready-made clothing and boots and shoes were reduced, a new trade would be opened with this country, where such things are absolutely not to be had.

REFRIGERATORS IN MALTA.

Malta should prove a good market for American refrigerators and ice chests. The few in use here are of the most primitive type. As a rule, they are merely oblong chests, lined with zinc; but even these bring good prices. I believe that the attractive, practical American article would meet with a ready sale, if properly introduced. The three ice factories here could supply all the necessary ice. I do not believe there would be much demand for high-grade goods; the call would be rather for refrigerators which could be placed upon the market at, say, \$15 or less. The few in use here are principally of English manufacture, brought from England by private parties. They are not on sale at the local stores. Malta has direct steamship communication with New York. The Valletta firms most likely to be interested in the introduction of refrigerators are: C. Breed Eynaud & Co., Robert Balbi & Co., M. A. Crockford & Son, Mortimer & Co., Dalzel & Gingel, Bugeja & Micallef, C. V. Galea & Sons, S. Anastasi & Sons, Emanuele Anastasi, P. Galea & Sons, Francis Balbi, and the Petrolea Bazaar. I would advise that catalogues, printed in English, be forwarded to them at once, together with the lowest export JOHN H. GROUT. prices.

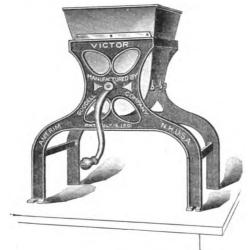

VALLETTA, MALTA, July 25, 1901.

Consul.

"Captain," asked the landlubber, "from what direction do you get a spanking breeze?" "From astern," growled the gruff old seadog, as he paced the quarterdeck.—Ex.

The Victor Vegetable Masher.

The illustration herewith shows a new machine just placed upon the market by the Goodell Co., Antrim, N. H., and 10 Warren Street, New York City. For a long time the need has been felt for some such machine, for until its appearance the mashing of vegetables was a laborious matter, requiring both skill and strength. The use of mashed potatoes is universal and constant, and in this item alone the claim is that the Victor will pay for itself in a week in any large eating house or hotel kitchen, being rapid in its operation and quickly cleaned for a change of vegetables. The result of vegetables

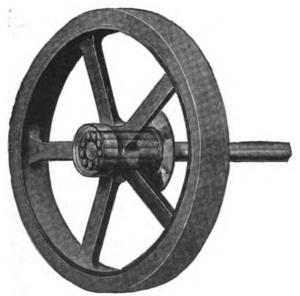

THE VICTOR VEGETABLE MASHER

passing through the Victor is a light, flaky mass free from lumps, and a vast improvement over the watery mush usually served. It is very simple, easy of operation and can be taken apart and reassembled in a few seconds. Its invention is the result of long study and experiment by one of the leading chefs of the country, and produces precisely the results desired in serving vegetables of all kinds. The machine occupies bench space of $14\frac{1}{2}x23\frac{1}{2}$ inches, and weighs 45 lbs. It is solidly built, will stand any amount of hard work. All interior parts carefully tinned to prevent rust. Price \$16 each, with discount to the trade.

Improvements in Carpet Sweepers.

In our last issue we illustrated the National Sweeper Co.'s new "Roller Bearing" Sweeper, together with an unassembled view of its new dust-proof "Roller Bearing" device. In the accompanying cut, we show another view of their "Roller Bearing" device, also cuts of their "Roller Bearing" Marion

ROLLER BEARING WHEEL.

and Monarch Sweepers. The artist has drawn the wheel in such a manner that it can be very easily understood and it will need no further explanation or description than that

given in our last issue. It was long ago demonstrated that a "Roller Bearing" is the easiest and smoothest running bearing known to the Arts and the National Sweeper Co., who are the inventors and sole owners of the patent on the "Roller Bearing" as applied to their Sweepers, are to be congratulated on having brought their Sweepers to such a high state of perfection in the short time they have been manufacturing Sweepers. Another innovation of this company is their new method of packing each Sweeper in a card-board box or carton, as shown in their advertisement in this issue. This

THE "MARION" SWEEPER.

does away entirely with the old method of wrapping in paper and tying with a string. These boxes also protect the finish of the Sweepers, makes them more convenient for the dealers to handle, more desirable shelf goods and a very attractive package to show customers, also a saving in time and labor to the dealer, as the Sweepers can be delivered without re-

THE "MONARCH" SWEEPER.

wrapping. The National Sweeper Co. is making a very liberal offer for their first order, and they will be pleased to send catalogues or furnish any other information that may be desired in regard to their line.

Making of Matches.

Results of ingenious machinery.

It was found a few years ago, says an exchange, that each of the inhabitants of Great Britain consumed on an average eight matches a day. The consumption in this country per capita is considerably larger, though exact statistics cannot be given because treasury returns of the imports of matches convey no idea of the number brought into the country, which is certainly large. The foreign matches are not so cheap as ours, but for one reason or another there is considerable demand for them.

If we figure on the British basis of eight matches per capita a day the home consumption is 610,427,096 matches a day. This enormous figure may be accepted as approximately the home consumption of home-made matches in addition to the foreign matches that are found in all of our markets; but it by no means represents our total output, for a considerable quantity of American matches are sold in European and other countries.

Success in matchmaking at the present time is largely a question of machinery. Matches are sold at a price so exceedingly small that the manufacturers controlling the best machinery for eliminating hand labor and producing excellent matches at a minimum cost have a great advantage in trade. It is next to impossible for one match factory to compete with another unless its machinery is equally efficient. It cannot buy the machinery used in rival factories for it is almost invariably the case that a manufacturing concern

absolutely controls the patents it has thought it advantageous to employ. In order to compete successfully in the match industry, nowadays, it is practically essential to own machinery that is at least as perfect as any used by rival establishments.

American matchmaking machines are the best in the world, which accounts for the success of the American concern in England the other day in absorbing the plant and business of the largest British establishment.

Our public is paying for matches to-day less than half what it paid twenty years ago, though they were then regarded as very cheap. Elderly persons can remember the time when matches were husbanded with considerable care, for it did not take very many of them to represent the value of a cent. But now, thanks to machinery and improved process, nobody cares very much how many matches he wastes trying to light his pipe on a windy day. In fact, matches are so cheap that the cost of supplying a great country with all the matches it wants does not reach an impressive figure. The total product of all our match factories is sold for less than \$10,000,000 a year, which cuts a very small figure when it is remembered that the value of the machines of all kinds that are produced in this country every year is alone about \$400,000,000. Match manufacturing is a small industry after all.

Not many establishments are required to turn out the matches this country needs. Over in New Jersey, only a few miles from New York City, there are two factories with a capacity together of 90,000,000 matches a day. The largest factory in the country, at Barberton, O., can turn out 100,000,000 matches a day, probably a seventh of the entire consumption.

This country has a great advantage in the abundance of aspen, which tree is superior to all other timber for matchmaking on account of its natural qualities and the ease with which it is worked. It is light, spongy and splits easily, and though pine, linden, birch and other woods are also used in this and other countries, aspen is preferred to them all. European match manufacturers have been engaged in a scramble for years past to secure a sufficient quantity of aspen. Germany is importing from Russia every year about 3,500,000 cubic feet of aspen to supplement her own supplies.

Beeswax as Money.

Commodity that is as good as cash in the Hardware business.

It will surprise many people to learn that in almost every part of the United States there is something which merchants regard just as good as the cold cash, says an exchange. That something seems commonplace, for it is nothing more than beeswax. But it is only in one branch of trade that beeswax is current, and that is the one the average person would least suppose—the Hardware line. The reason Hardware stores handle beeswax was explained the other day by a prominent wholesale dealer. It appears that all through the South, as well as in other parts of the country, the tin peddlers swap their wares for beeswax, which they get very cheap.

They make a nice profit on their tinware in the trade, and they also get a profit on the beeswax when they turn it over to the retailers in Hardware. The beeswax passes from them to the wholesale Hardwaremen in the cities, and they ship it in barrels to New York. Wholesale Hardware dealers often receive notices from customers that they have shipped a certain number of barrels of beeswax to apply on account. Beeswax is always a staple article, and in the trade is just as good as the cash at all times.

Like many other goods it sometimes fluctuates in price, but there is always a steady demand for it at the market value. Before the patent hives and honeycombs came into use some years ago, the wholesale price of beeswax was 25 cents a pound. Where large numbers of bees were kept the patent comb was used, and the consequence was that the bees didn't have to manufacture any comb, and in the course of a

year the production of wax decreased so much that the price went up to 70 cents a pound wholesale. It went even higher than that for a while, and then it fell again but it has never got back to where it was before the patents were adopted. If it were not for the tens of thousands of small bookkeepers who cling to the old style of handling bees the price of beeswax would be more than \$1 a pound.

Utilization of Waste Products.

There are many instances of experiments in the utilization of waste which read as if they were intended to be facetious, although the investigators may be in earnest. "One chemist," writes Prof. Peter F. Austen, in the September Forum, "made a wine jelly out of old boots, and was enthusiastic about it—more so, probably, than those who partook of it and did not learn the fact until later. Another converts old shirts into glucose, ferments it, distils off the alcohol, colors and flavors it, and produces a fine grade of whisky. Still another scientific experimenter feeds his whole family with cakes containing a large amount of powdered sawdust, and is pleased to find that the diet is relished and digested.

"Speaking of sawdust, it is a singular fact that in the United States this waste has been allowed to accumulate in various places until it has become a nuisance, especially when it has been allowed to run into rivers and choke up the channels, disfigure the shores and in other ways make trouble. Although there are not a few methods of utilizing sawdust, but little attempt seems to have been made in this country. The amount of sawdust produced has been reduced by the displacement of the circular saw by the band saw, which makes much less dust. There is, however, plenty of sawdust produced, and, as a rule, it does not find any application. In view of this state of affairs, a brief mention of some of the utilizations of sawdust will be of interest.

"The first use, as would naturally occur to any one, is to burn it. Several special forms of furnaces have been invented to do this efficiently. In some cases the sawdust is dried before it is burnt, while in others it is dried in the furnace in which it is burnt. It can also be mixed with coal slack, spent dyewood, turf, peat, etc., and compressed into briquettes, which allows it to be sold for use in place of coal. As coal is very often highly-priced in regions where sawdust is produced, there is an opportunity for a large profit. By the dry distillation of sawdust all the distillation products of wood are obtained, and this manufacture can be conducted as an adjunct to the working of wood in a way to insure a profit. The products obtained are gas, wood alcohol, acetic acid, tar and oils. From the tar there have been obtained benzole, toluole, zymole, cumole, paraffine, naphthalene and hydrocarbons, which are used in the manufacture of aniline colors. Carbolic acid and creosote are also obtained. As a last product, charcoal is left in the retorts.

"By sieving out the coarser particles, mixing the remainder with various fillers and agglutinants, compressing and heating, some very interesting materials have been made in the way of artificial wood, plastic masses, etc. Such a material was brought out by Latry, in Paris, and was made from prepared sawdust and blood. It formed a hard, black substance, which could be tooled and machined like wood. It took a high polish, and could be glued, lacquered and gilded. Imitation marbles have also been made from the fine dust of certain woods and the dust of ivory and similar waste. mixture of sawdust and phosphate of lime with a binder has been used as a material for taking casts of sculptures, and has been called 'Similibois.' Slabs for parquet floors have also been made from sawdust, as well as plates for bas-reliefs, art castings, panels and decorations. Terra-cotta lumber and artificial lumber are both instances of the utilization of sawdust. Sawdust compositions have also been used for sidewalks and dinner plates."

RECENT TRADE PUBLICATIONS.

ART STOVE Co., Detroit, Mich. Catalogue of 116 pages, handsomely printed on coated paper, filled complete with beautiful half-tones, showing a full line of the Laurel Stoves and Ranges, in the manufacture of which this company has long been known. Illustrations are given as frontispiece, showing the extensive plant in the possession of this company, and also a fine view of their Chicago branch and warehouse at 79-83 South Jefferson Street. Full descriptions are given of everp particular Stove and Range. Illustrated. sizes and dimensions of important parts, together with a telegraphic code having reference to each particular item, which is made part of the text throughout the volume. certainly is a very handsomely printed catalogue, and one that those of our readers interested in artistic expression, as noted in stove catalogues, will be pleased to inspect and be impressed with.

Central Hardware Co., Philadelphia, Pa., represented by C. E. Peabody, 90 Chambers Street, New York. Pamphlet catalogue of 24 pages, covering a line of Shelf Hardware manufactured by this company, which includes Cupboard Turns and Catches, Sash Fasts, Fasteners and Lifts, Barrel Bolts, Door Pulls, Thumb Latches, Barn and Store Door Latches, Pruning Shears, Chest Handles, Hat and Coat Hooks, Refrigerator Hinges, etc., etc. Included in its contents is a line of Hand and Compass Saws, Kitchen Saws, Hack Saws and other similar goods. They also manufacture a line of Frame Pulleys in styles and sizes suitable for general distribution.

Schoverling, Daly & Gales, 302-304 Broadway, New York. Pamphlet catalogue of over 100 pages, which is a miniature catalogue, being a reproduction of their large catalogue 1901 B. Included in its contents will be noted a large line of Breech-Loading Guns, double barrel, including the celebrated "Daly" gun, "Manhattan Arms Co.," "New Haven Arms Co.," "Ithaca" guns, and a large variety of similar goods that have formed part and parcel of their important stock. In addition to the above, a line of Sporting Goods of every description will be found in the contents of this very useful catalogue. Everything in the shape of Bicycle Sundries and Sportsmen's Specialties in general will be found incorporated. Net prices are given throughout in a very taking manner, making unnecessary the customary discount sheet that is usually considered indispensable.

Brown & Sharpe Mfg. Co., Providence, R. I., have issued a pamphlet catalogue, envelope size, under the title of "Something New," which is devoted entirely to the "Brown & Sharpe" Spring Calipers, Spring Dividers, and the new Firm Joint Calipers, which are being manufactured by this concern. The "Brown & Sharpe" Calipers and Dividers are made in the usual styles and sizes of these goods running from $2\frac{1}{2}$ to 6 inch; furnished with spring nut or solid nut, as the case may be, the spring nut being entirely new in design, and constructed on the principle of the spring chuck, with the jaws carefully hardened. The Firm Joint Calipers are made in the usual Outside and Inside styles, running from 3 to 24 inches, and are calculated to fill a requirement in this particular line that has long been desired. This catalogue should be sent for by our readers.

E. W. Bliss Co., Brooklyn, N. Y. Pamphlet catalogue No. 4, 28 pages, covering a line of Drop Hammers and Trimming Presses manufactured by this well-known company,

making one of a large number of catalogues that cover their several important lines of Presses. This is handsomely printed in common with their other catalogues on excellent paper, the finest kind of half-tone illustrations making plain all the important features of the presses referred to. Descriptions, dimensions and weights are given complete, every possible requirement being attended to covering those special features.

ODIN STOVE Mrg. Co., Erie, Pa. Illustrated catalogue and price list of 1901-1902, in pamphlet form, of 40 pages, covering the line of Odin Gas Heaters and Appliances with the manufacture of which this company is identified. The catalogue is very complete, and includes twelve new styles of Heaters placed on the market for the first time this season. The designs are new and modern, very handsome in appearance and the catalogue is illustrated throughout with half-tone engravings, showing the goods in an admirable manner. This is a desirable catalogue of this class of goods, and our readers handling this important line would do well to send for the same.

REED MFG. Co., Erie, Pa., who are manufacturers of Plumbing, Steam-fitting and Hardware specialties, issue a very neat little catalogue of 24 pages, printed on excellent paper, and finely illustrated, showing their line of such goods as Malleable Iron Pipe Stocks, Pipe Dies, Machinists' Vises, Regular and Extra Heavy Combination and Sectional Jaw Pipe Vises, Pipe Taps and Reamers, various Pipe Cutters, both regular and quick-acting of the three-wheeled variety; Emery Wheel Dressers and Machinists' Wrenches, Pipe Wrenches and Gas Pliers, etc., etc. Included in the contents of this catalogue will be found Combination Pipe Tool Sets, which are sold by them complete with chest in three styles; also Beam Clamps and Pipe Hangers in the latest devices. They are also manufacturers of the "Economy" Oil Cup, which has met the approval of the trade for engines, motors and loose pulleys. It is a very desirable little catalogue for those handling this class of goods.

S. R. SLAYMAKER, Lancaster, Pa., John H. Graham & Co., Selling Agents, 113 Chambers Street, New York. Pamphlet catalogue of 70 pages, dated August 1, 1901, and forming No. 35 of a series, covering their line of Padlocks, Bicycle and Dog Collar Locks, Lathes, Night Latches, Railroad Locks and Car Hardware. A large number of new goods are included in this catalogue covering a line of Pressed Steel and Brass Padlocks; also new types of Night Latches, largely increasing the complete assortment of those goods which have been the important products of this well-known maker. Selection has been made in the construction of this catalogue, so that only the very active selling goods are shown. numbers no longer in heavy demand are omitted, although most of them can be supplied, if necessary. The catalogue is well gotten up, fully illustrated throughout, descriptions being easily understood. All cuts being exact size, makes it an extremely interesting gathering of a very desirable line of Hardware specialties.

Employer—Mr. Redink, you got off yesterday afternoon under the plea of being ill. I saw you afterwards going to the races, and you didn't appear at all unwell.

Clerk—You ought to have seen me after the second race, sir; I was bad enough then.—Ex.

PERSONAL SERVICE SERVI

"Green Book" Specialties.

Smith & Hemenway Co. and the Utica Drop Forge and Tool Co., 296 Broadway, New York City, are calling special attention to the improved Linemen's Flat and Side Cutting Pliers, illustrations of which we give herewith. Fig. 1 (Green Book No. 50) represents their standard Linemen's Side Cutting Plier manufactured by the Utica Drop Forge

one. But unlike the majority of combination tools, the manufacturers claim that every tool in this combination may be relied upon to do the work for which it is intended, with perfect satisfaction. The several uses to which it may be applied are indicated by the smaller cuts. It has in its make-up two staple pullers, two nail pullers, two wire cutters, two hammers, a pair of pincers, the equivalent of a

FIG. 1.

& Tool Co. This is carefully forged from the finest tool steel, and is so constructed that the leverage obtained is claimed to be fifty per cent. greater than in pliers of imported manufacture that have formerly been prominent in Hardware stocks throughout the country. The handles are formed in a manner that enables them to fit the palm of the hand perfectly, and this adds greatly to the ease in using them as well as increasing their strength. Fig. 2 (Green Book No. 118) represents their Insulated Linemen's Plier.

monkey wrench, a wire tyer or splicer for plain or barb wire, and a wire stretcher. It is 10½ inches long, and weighs but 1½ pounds. The Smith & Hemenway Co. have been very successful in introducing a number of these specialties, such as are described above. Although they began several years ago in a very small way, to-day they have in their control upwards of 700 different tools and finishes, samples of which are displayed in their show room in New York. It is natural for them to claim that their success has been attained

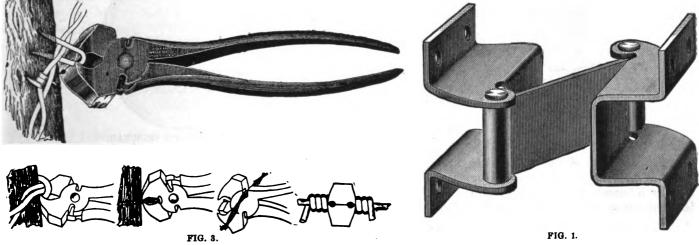

FIG. 2

This is designed to be specially adapted for telephone and electrical work. By its perfect insulation, which is part of its construction, it is impossible to receive a shock through the handles of this plier. The general construction is similar to that described above in Fig. 1, the same amount of leverage being obtained, but the addition of a patent round edge has been found in use to be greatly appreciated by the lineman, as it prevents cutting of the clothes when necessary to

by rigidly maintaining quality as against quantity, so that to-day the largest Hardware stores in the United States are handling to a greater or less degree many articles of their production, while at the same time their export trade in foreign countries is of an exceedingly extensive character.

Wilcox-Erickson Double Acting Steel Gate Hinge and Latch.

Wilcox Mfg. Co., Aurora, Ill., are placing upon the market one of the most novel and original articles in their Wilcox-

place it in the pocket. Another important Plier largely sold by this company is shown in Fig. 3 (Green Book No. 1900) which represents their latest pattern Russell Staple Pulling Button Plier. This is a very useful tool for general purposes, as in its many uses it forms eight tools combined in Erickson Double Acting Steel Gate Hinge and Latch that we have seen in that line, demonstrating the fact that this is the "age of steel" for specialties of such utility. Heretofore articles of this character have been made from cast iron, necessarily heavy and clumsy in appearance, with apparent

strength, although frequently liable to a breakage, which is made impossible in the one under review by the employment of steel as constructive material. Fig. 1 shows the hinge and Fig. 2 the latch. The hinge is easily applied, a common eye bolt being used for the top portion of the hinge. As the hinge has no top or bottom, no right or left, it is referred to

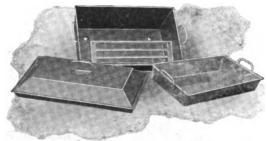

as being proof against the errors of the poorest mechanic, as it is almost impossible to wrongly apply it to the gate post. The hinge is not only non-breakable, but is besides much lighter than cast iron, thus affording a saving on the item of freight. It is stated that the latch has an adjustment hitherto unknown to gate latches, as it compensates for the shrinking and swelling of both the gate posts and gate stiles.

FIG. 2.

Royal Roaster and Baker.

The Royal Polished Steel Roaster Co., Troy, Ohio, are manufacturing the Royal Polished Steel Roaster and Baker, an illustration of which is herewith given. A number of similar roasters and bakers have been on the market for a number of years, but in the one before us the latest improvements to make it as perfect as possible for the uses to which it may be applied have been embodied in its construction. The outside pan and cover are made from polished sheet steel, while the inside pan and grate are of the finest bright sheet tin. It is claimed that in roasting in any iron pan the gravy is always discolored, and frequently tastes of the iron. The use of tin inside pans and grate bars in the construction of this roaster and baker is intended to obviate the above objection. The inside or dripping pan is kept from any contact with the outside pan by four indentations in the bottom of the pan. This permits of a perfect air-passage by its formation, and the burning of gravy and kindred difficulties are almost entirely avoided. Every effort is made in the material, workmanship and construction of the Royal Roaster to fulfil every possible requirement, in order to make a perfect article, and one that will merit and receive the confidence of the trade. It is made in seven different sizes. which extend from 9 inches by 13 inches long and 10 inches

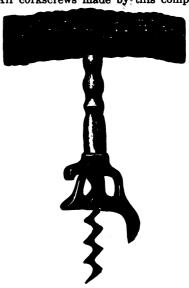

ROYAL ROASTER AND BAKER.

deep to the extreme size of 15 inches by 20 inches long and 9 inches deep, prices varying in accordance with the size. Further information in regard to this improved article will be furnished by the manufacturers on application.

Improved Stag Handle Corkscrew.

The Erie Specialty Co., Erie, Pa., who are well known as manufacturers of self-pulling corkscrews, distribute through the Hardware and housefurnishing goods trade several varieties under Walker's patents, from the cheaper varieties with steel finish and maple handles to the finest nickel finished with selected stag and pearl handles. They also manu-

oughly tested and guaranteed. We illustrate herewith one of facture quite a number of varieties of the ordinary kind of corkscrew. All corkscrews made by this company are thor-

STAG HANDLE CORKSCREW.

their Stag Handle Corkscrews, of which they make an extended assortment.

Rubber Horse Shoe Pads.

The Western Horse Shoe Pad Co., 52-60 Fifth Avenue, Chicago, Ill., are introducing to the trade the Rubber Horse Shoe Pads, an illustration of which we give herewith. is the belief of those interested in the matter that the majority of hoof diseases can be traced to excessive concussion, it being understood that if the horse traveled on a yielding surface like the soft ground, as nature evidently intended they should, diseases of the foot and slipping would be rarely heard of, and the horse prevented from becoming valueless when in his prime. Pads made of pieces of sole leather have been used, and some to which a piece of rubber has been sewed, riveted or glued, but the leather being exposed to the elements becomes hard and stiff, and elasticity almost entirely destroyed. To overcome this objection has led to the invention and adoption of the Rubber Horse Shoe Pad which it is claimed thoroughly lessens the concussion, is designed to expand contracted heels, and undoubtedly relieves tender feet and lowers hoof temperature. These rubber pads are manufactured to be used in connection with metal shoes, and are constructed so as to obviate the objectionable features in other pads above referred to. They are made of the same grade of rubber used in vehicle tires, extensive experiments made by the manufacturers having fully demonstrated this grade of rubber to be best for horse shoe pad service. heel or bar has been greatly strengthened, nearly a quarter of an inch more rubber being used than has heretofore been

RUBBER HORSE SHOE PAD.

the case. The pad portion which comes in contact with the hoof is made of several layers of heavily frictioned Sea Island cotton, which forms a very tough fabric, giving it the stiffness of leather, and yet unlike leather, the vulcanized canvas does not tend to brittleness or hardness from the necessary exposure or moisture. The heel is vulcanized to the friction part, making the heel and pad one piece. This is accomplished with a view of overcoming the necessity of stitching, riveting or cementing, which adds to the cost of the pad, and is even then frequently found defective, owing to the separation. Where a horseshoer does not carry these goods in stock, the company will forward a sample pair upon receipt of a tracing of a horse's front feet on a piece of paper, accompanied by the price, \$1 per pair.

REVIEW OF THE MARKETS.

wire Nails: A continued strong demand is still the prevailing feature of the Wire Nail Market. The increased facilities at the mills enable a fuller supply to be among the possibilities; still shipments are not as complete as the trade could wish, and a full assortment of sizes is not always immediately obtainable. Quotations continue as follows: f. o. b. Pitsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots	.80
To jobbers in carload lots	.85
To retailers in carload lots	.40

New York. A lighter demand marks the first week in the month, although some local disturbances are referred to as affecting the market unfavorably, and lessening the demand from the dealers. The following prices represent the market:

Cut Nails: The September prices on Cut Nails having been re-affirmed for October, no change in demand is especially noticeable. The manufacturers still complain of inability to get full supply of material. Prices are quoted as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

New York. Local market prices are unchanged, as follows:

Barb Wire: The demand for this staple, which has been an excellent one throughout the season, is gradually moderating in the Eastern markets; although the Western demand still continues an active one, sales being above the average for the month. Manufacturers, with increased facilities, are better able to make prompter shipments, which materially assist the deliveries from the dealers. Quotations remain without change. F. o. b. Pitsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers	in carload	lots, Painted	
44	less then	Gaivanized	9 RK
44	1699 (1141	"_ " Galvanised	2.95
To retailers	in carload	lots, Painted	2.70
		lots, Galvanised	
		an carload lots, Painted	
To retailers	in less that	n carload lots, Galvanized	8.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named.

Plain Wire: Mills are generally confessing inability to keep pace with the steady requirements, the demand keeping in a remarkably satisfactory condition, the mills being still behind orders with but little chance of material change. Quotations remain as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. for cash in ten days:

	Base	sises.
	Plain.	Galv.
To jobbers in carload lots	82.25	\$2.65
To jobbers in carload lotsless than carload lots	2.80	2.70
To retailers in carlots	2.85	2.75
less than carload lots.		2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

No 6	s. to 9.			. Base .	'ire Advi					COLO	anised.

Cordage: Advancing conditions make present prices show a considerable improvement, both Manila and Sisal being quoted at the highest prices that have obtained for some time. The following quotations represent the market:

	Pounds.
	Cents.
Manila, 7-16 inch and larger% inch	. 111/4
% inch	1144
4 inch and 5-16	121/4
Sisal, 7-16 inch and larger	1214 914 914
% inch	932
inch and 5-16 inch	101/
Lath Yarn, medium and coarse	ŘíŽ
Jute Rone, No. 1	101/4 81/4 61/4
Jute Rope, No 1	. 6

Linsced Oil: The following quotations are the latest announced by the Dean Linseed Oil Co:

In lots of less than 5 barrels...... 66 cents per gallon. In lots of 5 barrels or more...... 65 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw. Calcutta Oil, 85 cents per gallon.

THE PHILADELPHIA TRADE.

The Fall season is now well under way, and the cooler weather of the past few days has made an increased demand for oil stoves, skates, snow shovels, sleds and Winter goods, and the general outlook continues good.

During the first week in October, trade is usually interrupted by State and County fairs, conventions, etc., and salesmen report this year has been no exception, but this is only temporary, and, as far as can be judged, the outlook for a promising Fall trade is exceedingly good.

The month of September just closed shows a very handsome increase over the same month of previous years, and the consumption appears to be entirely legitimate and perfectly free from speculation. Goods are rapidly being consumed, and the main trouble to-day is to get goods. Manufacturers are still far behind on orders, and, with some of them, it is a question whether prices should not be increased, and, in many cases, only a strong sense of business prudence and good judgment has kept goods from going higher.

Collections continue fair, and there seems to be an increase in the number of dealers who are discounting their bills.

BIDDLE HARDWARE Co.

THE BALTIMORE TRADE.

With the present rush of business we are absolutely buried, socially, and find but little time to eat and sleep and no time to be merry. If the average profit in seasonable goods was larger, we could perhaps sleep and eat better, and many good things would follow later, but it is a matter of regret to the jobbing trade that loaded shells, shot, powder, etc., do not pay a profit equal to the average cost of doing business. Shot costs the jobber \$1.45 per bag in ton lots, and is sold at list price, \$1.50 per bag to the retailer.

Loaded shells, axes and stove pipe are still hard to get hold of, and we are far behind on our orders on these goods. The country seems more prosperous and the volume of trade larger than we have experienced for a long time. Collections continue good.

H. W. Webb & Sons.

THE COLUMBUS TRADE.

Only three months more of 1901 remain, and I venture the assertion that more unfilled contracts and orders will go over to another year than ever before. This has been a remarkable year in many respects. The demand for goods in every line of mercantile business has been far in excess of the supply. Dry goods, shoes, hats and even dry goods notions have been hard to get, and every Hardware merchant, both jobber and retailer, knows the serious annoyance and loss they have had to stand. It has simply been out of the question to keep a complete stock in any line. It has been much easier to sell goods this year than to get them. Builders' Hardware and tools have been in active demand and manufacturers have frankly advised dealers that they could not fill orders for a month and some times three months. Then you could safely add a month or two more. We have orders out that were given in April and May, still not completed. This all indicates that every class of people has money to buy goods and is making improvements.

The country is becoming a net work of electric railroads and telephone lines. This takes an enormous lot of material and gives employment to men both in towns and the country. Farmers who have an extra team can get a job any time on some electric road.

Prices on Hardware have been steadier than they were in 1900. I do not remember nails and wire ever remaining the same price so long, and there is no probability of the price being lowered so long as the demand keeps up. Indications for continued active business for 1902 are the very best. All that is necessary is to keep a steady rein; buy staple goods in fair quantities but not in speculative quantities unless you have the money to spare. Even then it is none too safe, but keep a good stock as there will be a demand for it. The season so far in 1901 has been very uneven. June was a wet one and farmers could not do any good with corn; but how the weeds did grow! Many a corn-field would have made a good place for a boat race, and then we all got dry, and then dryer and finally withered. Result: Poor corn crop, ditto potato and tomato. Think of potatoes selling for \$1.40 per bushel and tomatoes \$4.00 per bushel. But peaches, yes that crop was a "peach." They will not do though for steady diet. Peaches and cream are good to top off with, but there is always a corner in one's bread basket for a good-sized potato, and it does not make much difference what else you have, the potato corner of your stomach is not satisfied until it gets the potato; and it is all the same whether they cost 25 cents or \$1.25 per bushel. It is the same with other necessities of life. For instance, I paid 25 cents for about two dozen fish worms several times during my outing the past summer, but to offset that, nice little green frogs were only 10 cents a dozen. If some one would start an "angle worm" farm up in the

Georgian Bay country, he would have a cinch, but he must take the farm with him. There are plenty of rocky places to put it when he gets there. Now, for the information of any Hardwareman who wants to own an island all by himself so he can say "Up on my island," I will say that they can be bought for \$1.00 each and up, owing to size. You can get them up in the Georgian Bay from the size of a bladder of putty to a barn yard, and some larger. If you want to fish, write to me and I will tell you just where they live. It is strange how you will meet people in an out-of-the-way place. I joined a party for an outing from a town called Little Current, Ontario, not expecting to see any one I knew, but to my surprise there were on the little 20-foot tug acquaintances from Dayton, Toledo, Cleveland and Columbus. Do not ever start off for a time thinking you will get way back where no one will know you. You will get fooled if you do. I knew better, so I took my wife with me. I tell you those "Canucks" can give a Kentuckian pointers on drinking whiskey. Most of a boat's cargo for some of the towns is Canadian whiskey. I do not know how it compares with Kentucky brands, as I am no judge.

The terrible calamity that has befallen our country in the assassination of President McKinley has proven a number of things. First, and greatest, is the proof of loyalty in every part of the United States. All nationalities and all religious and civil societies are one in condemnation of the cowardly deed, and equally unanimous in commendation of the high character and wise administration of the martyred President. Another lesson learned is that this government has been too easy with the class of people who by speech or through the press encourage, and directly or indirectly advocate, just such a deed as was committed at Buffalo. Free speech does not license any one to preach anarchy. It is hard to say which is the most poisonous, yellow journal cartoons and writings, Herr Most and Emma Goldman's teachings or so-called anti-imperialist rantings. The important lesson shown in the assassination of the President is, that from now on the government must act before the assassin. Whenever a man or woman preaches or talks treason, pinch him. It matters not whether it is in the halls of Congress or in some garret or in a yellow journal. It is a fortunate thing that so good a man as President Roosevelt is McKinley's successor. There is no reason why this country should not keep up the pace in the financial and industrial world that has existed for the past few years. The manly avowal of President Roosevelt, that he would continue the policy of President McKinley had a quieting effect on the financial and commercial world that was marvelous. People have confidence that he meant what he said and they know he has the ability to make his promise good. With a revision of the tariff laws and broadened reciprocal treaties, this country has nothing to fear.

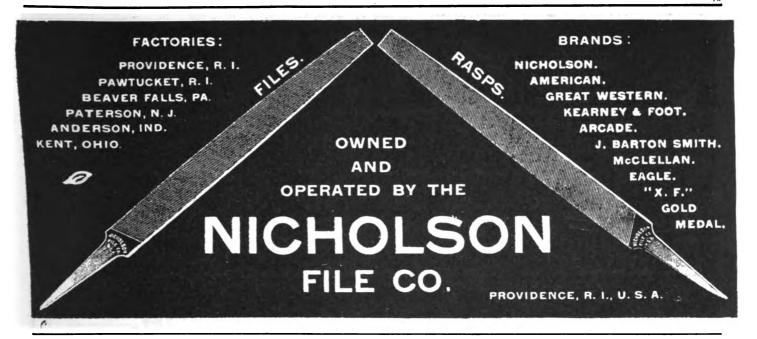

THE SMITH BROS. HARDWARE Co.

THE NASHVILLE TRADE.

Trade conditions for the past thirty days have shown improvement over the thirty or sixty days previous, still they are not up to the standard. The drouth through July and the flood in August are making themselves felt now, and we cannot look forward to a very heavy Fall and Winter business. Crop conditions generally (and on the growing crops in a great measure depends business) are far from being favorable, and the corn crop in the middle section of our State will hardly be one-fourth the full crop, naturally cutting down the cattle and hogs. All together, this will have, we fear, rather a depressing effect on business.

The recent advance in the price of bar iron, and the very strong upward tendency in all lines of Hardware, inspires with confidence the buyer who might otherwise fear a decline and not fully anticipate his wants.

Collections from the country trade are not as good as usual

for this time of the year, yet there is a possibility of an improvement in this line as the Fall season comes on.

Sportsmen's goods such as guns, ammunition, etc., are moving very slowly. Builders' Hardware is a trifle better.

Doubtless all jobbers who belong to the National Hardware Association are looking forward to a pleasant and profitable meeting at Cleveland on the 9th, 10th and 11th, where will be seen the rotund form and genial, smiling countenance of T. James Fernley, secretary-treasurer of the Association.

H. G. LIPSCOMB & Co.

THE PITTSBURGH TRADE.

The general business situation could hardly be better than it is at present. Plentiful crops now gathered are bringing the growers good prices. Labor troubles are over, and all mills are running to their fullest capacity, with orders at paying prices, that will keep them busy all Winter. A plentiful supply of good money for all legitimate enterprises, and confidence of the public in the strength of the situation. Our domestic market alone will keep the mills active for months. The foreign demand at present seems to have fallen off somewhat. As to the Hardware jobbing trade, under the above conditions it should be profitable, yet it is a fact that many goods are distributed below the cost of handling. The disposition of some houses to try for all the trade is the cause of this, while a more moderate policy would result in a profit for all, as there is business enough to go around. Some are advocating a general consolidation of jobbing houses as the only remedy. If this were possible, it would rival the biggest combines in capital and influence.

LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

The vacation season is past. Each one of the force is again at his post, and now, with the exception of sending one delegate to Cleveland to attend the National Hardware Association, it would seem that the usual steady grind will quietly proceed until inventory time comes in December. The slight rains, though coming very late, have improved the crop conditions, and trade is very good indeed. Prices are steady, and while there is no speculative demand, merchants are ordering freely for their wants for the balance of the year. Collections are a little slow, but no doubt will improve as soon as threshing is finished.

Sickels, Preston & Nutting Co.

THE ST. PAUL TRADE.

We expect that your convention number will be worthy of preservation, both as to its being, as usual, a splendid history of the work done and the faces of the prominent Hardware men of the country, and we wish we had some something startling to write which could go down to future generations of your issue, but the usual routine only occupies our time and attention, yet the Hardware trade is unusually good, and has been so for several years, and without doubt, will be for several years to come. The whole country is prosperous and all get the benefit to a greater or less extent. Of course, we must expect some public, as well as private calamities, such as McKinley's murder startles the whole world, a financial failure makes havoe among many or few, according to its magnitude, but from all we rise to again put our shoulder to work and raise ourselves above the trouble. We know that the right thing to do is to do right. Let every day's work be finished in such a way that no regrets will be necessary, and then take the consequences. Men have lived before us and will live after we are gone, and our record is all that we really leave for an inheritance. The Hardwareman's lot is not an easy one, but he can and must be honest in every way. His desire to become rich is proper, but riches alone never bring happiness—a contented mind and a sound body are more to be desired. We anticipate the pleasure of meeting old acquaintances and making new ones while at Cleveland. C. W. HACKETT HARDWARE Co.

THE OMAHA TRADE.

Trade is moving in the usual channels in satisfactory volume and without anything especial to note. Season goods, especially in the line of sheet iron and tin plate are, of course, extremely difficult to procure, but the stringency is not as severe as was expected 30 days ago, though possibly a touch of cold weather may entirely change conditions in this respect. Prices are fairly well maintained, collections are up to the average and no complaint appears to come from the country in regard to either present business or future prospects.

Rector & Wilhelmy Co.

THE SAN FRANCISCO TRADE.

In moulding into this paragraphic form the notes jotted down this second day of October as retail Hardware dealers kindly responded to the Hardware correspondent's line of inquiry, the trade is busy enough just now, especially the builders' Hardware trade, but is bothering itself about how things are going to come next week, and the week and beyond thereafter. The gist of the combination talk is that owing to labor troubles, yet unsettled, new building contracts filed within the last sixty days, and numerous others in a condition of negotiation, are being held in abeyance, and the present activity in this connection, which was begun when labor unions went on strike, with the proviso that unfinished be concluded, will be completed within the next few days.

Just what you Want

THE

LEE BREAD CRUMBER

No. 10.

For the Hardware Trade.

SIZES heretofore made are not suitable for the Hardware trade, being sold through the hotel supply houses exclusively. The No. 10 is for family use and there will be a large demand as it will be liberally advertised. This size

Will be Handled by the Hardware Stores.

See that you have a sample at once, of your Jobber, or address-

N. Y. Office, 10 Warren St. GOODELL COMPANY, Antrim, N. H., U. S. A.

Expression was also voiced to the effect that stocks are in a state of depletion and that immediate orders are being delayed by the crowded factories.

Two weeks ago it was noted in this correspondence that Secretary Bennett of the San Francisco and Oakland Retail Hardware Dealers' Association, had rallied fifteen new members. The number should have been eighteen, as follows:

Star Hardware Co., Knoles & Kennedy, T. B. Smith, Eastman Bros., E. M. Winegar, Hetty Bros., J. J. Cass, M. Schimetsheck, W. H. Borman, J. Haug, Claude Long, Albert Gibson, P. Cove, A. K. Kennedy, M. Cuneo, P. A. Ferrin, A. Beck and Howse Bros.

This month's meeting of the association, next week, is to be favored with an address by Alfred C. Rulofson, manager of Baker & Hamilton's Hardware department.

Just on the eve of mailing time for this correspondence, it was heard with favorable comment at several of the leading retail Hardware houses that prominent local wholesale Hardware and iron and steel concerns had under serious consideration a business combination with a capital stock ranging from \$5,000,000 to \$20,000,000. Under this sort of a pooling agreement it was argued the big Hardware firms would be enabled to operate their concerns at a much less cost than is the case

at present; that the army of drummers now in the field at an expense of many thousands of dollars annually to the competing firms could then be dispensed with, and in greater bulk goods could be bought and at a great saving. In other words, the proposed pooling of Hardware interests would prevent competition, and while it would lessen the cost of materials to the members of the pool, it would enable the consolidated concern to sell goods at a lower figure and still yield a fair profit.

Industrial Press Association.

She Understood.

"Excuse me," he said to the applicant for the typewriter's position, "but I would like to know your age?"

The young woman looked astonished.

"May I ask what that has to do with my fitness for the place?" she inquired.

"Nothing," he promptly answered. "You see, it's my wife that wants to know."

"In that case," said the applicant, who was pretty as well as young, "tell her I am 47."

And the smile that followed this ingenious statement brought out four beautiful dimples.—Cleveland Plain Dealer.

WITH 14 or 24 POINTS. -See note opposite.

7.80 8.40 10.20 11.40 12.60

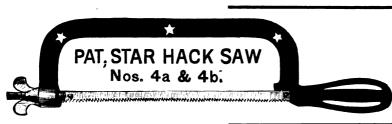

The blades in the above list are our standard goods with 14 teeth to the inch. We also make the 8, 9, 10, 11 and 12 inch blades with 24 teeth to the inch, for cutting tubing and thin sheets of metal, the prices of each kind being the same. Both have a good set. In filling orders we shall always put in the coarse blades unless the fine ones are particularly named.

PATENT STAR * HACK SAW No. 2.

Solid frame, to hold 8 inch blades only, and face them in four directions. Polished and nickel-plated. Cocobola handle.

Price, per dozen, \$8.40.

PATENT STAR ★ HACK SAW.

4A and 4B.

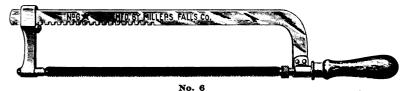

This No. 4 is a Patent Cast Iron Frame and so constructed as to face blades in four different directions. The pins which hold the blade are fast in the frame and cannot drop out. It is a very stiff and desirable frame with japan finish.

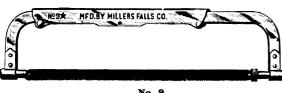

No. 4 A, for 8-inch blades, per doz., \$3 00 4 B, for 9-inch blades, 3.00

PATENT STAR * HACK SAW No. 6.

This is the stiffest frame we make. It is highly polished, heavily nickel-plated, and will face the blades in four directions. The handle is cocobola. This No. 6 Frame will hold all blades from 6 to 12 inches.

Price of No. 6 Frame, per dozen, \$12.00.

PATENT STAR * HACK SAW No. 9.

This frame holds blades from 8 to 12 inches in length. It is an extension frame covered by a steel sheath, as shown in the cut and has cocobola handles. The sheath makes it very stiff, and at the same time very light. It is polished and nickel-plated. The blades may be faced in either direction. Price, per dozen, \$12.00.

No. 9.

PATENT STAR * HACK SAW No. 10.

We offer this as the best Extension Frame in market. It is light and quickly adjusted, having strength in the middle, where strength is needed. It is made of tempered steel, polished and nickel-plated. The handles are cocobola wood, highly finished. It carries blades 6-7-8-9-10-11 and 12 inches long.

Price, per dozen, \$12.00.

FALLS CO, 28 Warren Street, NEW YORK. MILLERS

Sargent's Gem Food Chopper.

Actual use in many kitchens demonstrates it to be the best made and gives us grounds for so confidently advertising it and advising you to sell it to the housekeepers in your vicinity.

The Gem Food Chopper is also a first-class meat cutter that actually cuts raw meat and cooked

meat, cuts it in pieces of uniform size as desired, cuts it quickly and easily. It chops all kinds of vegetables and fruits, bread, crackers, nuts, cheese, in fact everything that has to be chopped for culinary purposes. A good article for a live dealer to sell.

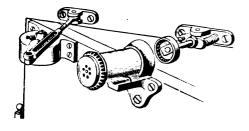

SARGENT & COMPANY, Manufacturers,

New Haven, Conn.

New York.

Boston.

Sargent's Eclipse Door Check and Spring.

A great many dealers are selling it and they find it a profitable article to handle. It is not an experiment but a practical device that stands the test of time and is noiselessly closing doors all over the world. It is simple, durable, easy to apply, easy to keep in order—all points that tell. You should be prepared to supply the demand for the Eclipse which comes with the cold weather. We will give you helps to sell it—our booklets and electrotyped advertisements are at your service. If you are not posted drop us a line and we will quote our prices.

SARGENT & COMPANY, Manufacturers,

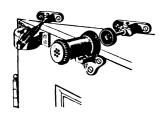

New Haven, Conn.

New York.

Philadelphia.

Goods that sell—Every ha

Eclipse time again

and you will have calls for this old reliable noiseless door closer. Sargent's Eclipse Door Check and Spring stands the test of time and use, it closes doors quickly, prevents all slam-

ming, is easy to apply and easy to keep in order. The Eclipse is a profitable article for dealers to sell to churches, schools, hotels, stores, public buildings and dwellings; now is the time to do it. Better order to-day so as to be ready for the first calls.

Door bells for all

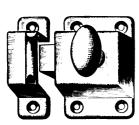

This is the Electric-Ring kind, no battery required. It is operated by the bell turn, works easily, has a loud sounding ring that can be heard all over the house.

If you want to please your customers sell them Sargent's Electric Ring Door Bells. If they do not like the one shown here we have the same style

of bell operated by push botton—looks like an electric bell, rings like an electric bell, without the annoyance of having a battery to keep in order.

A neat Cupboard Turn

This is one of a line of Cupboard Turns made of Wrought Steel and Wrought Bronze Metal. Some have Oval Knobs as shown in the cut, others are with Round Knobs and T Handles; they are furnished in

all the desirable finishes; are made well, look well, work well, wear well, sell well. Your stock is not complete if it does not contain a full line of these goods.

Good Sash Fasteners

They are strong and secure, fasten the window tight, prevent rattling of the sashes—in fact Sargent's Diamond Sash Fasteners are popular because they are so satisfactory; every dealer who wants to be up-to-

date sells them in one or more of the finishes furnished. Made in two sizes. We make in addition to the Diamond a large variety of Sash Fasteners—if one style does not suit your trade sell another but be sure it is Sargent's.

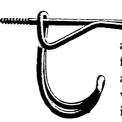

For transoms

we think our Automatic-Grip Transom Lifter is about right and we are not the only ones who think so for we sell them by the thousand. They are well made and the automatic grip permits of the transom being locked at any point.

Made with several sizes of rods and in all lengths. Suitable for transoms opening from the top or from the bottom or hinged in the centre. We make also a Double Transom Lifter for operating two transoms at the same time and a Transom Opener for operating a transom that works vertically.

Hooks that are strong

Sargent's Steel Wire Coat and Hat Hooks are strong, well braced and nicely finished. Made in three sizes, 2½, 3, and 3½ inch. Many are in use and we have to keep the machines going to keep up with the demand

but we want your orders and you can depend on it that they will sell fast. We make them of Brass Wire, too, and can also furnish a Wire Ceiling Hook that will sell just as well.

SARGENT & COMPANY, Manufacturers,

New Haven, Conn.

New York.

Philadelphia.

dware dealer should handle them.

Mince-pie time

is here and every woman who makes that great American dessert should have Sargent's Gem Food Chopper. It is a great kitchen convenience at all seasons and is useful in the preparation of the substantials as well as the desserts. It is the best Food Chopper made and has steel cutters that cannot

break. It is a good article for a hardwareman to push—every housekeeper is a possible customer—and there is a good profit for the dealer. We say more about the Gem on page 59.

Snaps are used

in your part of the country, of course; they are used in every place where horses and harnesses are used.

Sargent's Covered Spring Snaps are made in all sizes and all styles; they are strong, the springs are good, the finish is a good C plate and altogether they are Snaps that you can sell with the feeling that your customers will want more of them. We make other kinds of Snaps, too.

Rope Ties

Our Rope Horse and Cattle Ties are made of Jute Rope and Sisal Rope of different sizes and different lengths, some with one snap, others with two. We have a good line of these Ties and would be glad to quote our prices to dealers.

For the holidays

Sargent's Awls and Tools are especially suitable for holiday trade. Why not put in a line and have them on exhibition; they are first-class tools, made of the best steel and handsomely finished. We make several sizes and styles. Will give full information and prices on request.

Screw Drivers are in demand

at all seasons of the year. We

make many kinds so as to please those who want flat blades and those who want round, those who want white handles and those who want black. The steel is superior quality; they are tools that can be depended on. Made in all lengths, of course.

And Planes

We are very proud of Sargent's Wood Bottom and Iron Planes. It pleases us to turn out such satisfactory tools; the immense number

sold shows that mechanics call for them because they stand the test of actual use on the work-bench. We make these Planes of the best materials obtainable. If you want the reputation of selling the best tools sell Sargent's Planes.

Our line of Vises

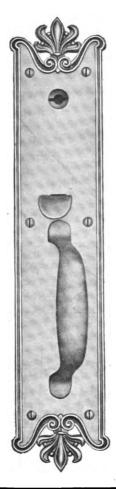

is complete and includes Oval Slide Vises, Machinists' and Filers' Parallel Vises and Saw Vises. We make many sizes. They are strong and work easily.

Sargent's Artistic Hardware

has met with much favor among builders, home builders, especially. We make a variety of designs, to conform to all tastes and suit all pocket-books. Hardware dealers will find that it pays to sell Sargent's Artistic Hardware; it will please those who use it; it is widely known as the kind that gives satisfaction. Sargent's Artistic Hardware is the standard; sell the standard and please your customers.

Sargent's Easy Spring Locks.

This advertisement would not be complete without some reference to Sargent's Easy Spring Locks just as no hardware stock is complete without them. They have been extensively advertised to builders and have a desirable reputation for excellence of manufacture and durability while the Easy Spring—Easy on the Latch Bolt, Firm on the Knob—puts them a long way ahead of anything else in the lock line.

HARDWAR E PRICE BOOKS

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

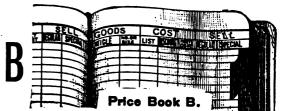

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. Size of page, 4 x 7 inches.

FOUR EDITIONS:

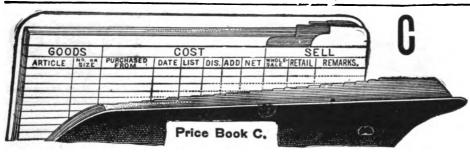

A 2, 400 pages, A, 200 pages, - \$1.00 ▲ F, 200 pages with flap, 1.25 ▲ F 2, 400 pages with flap, 1.75

In this book each page is complete in itself, and the record of does not, as in Book A, run across two pages. Thus it accommon a larger range of goods with much less detail in the record. I use of familiar abbreviations is sufficiently large for the convenien concise record of prices. Page, 4 x 7 inches.

FOUR EDITIONS

B, 200 pages, - • \$1.00 B 2, 400 pages, - • \$1.50 B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

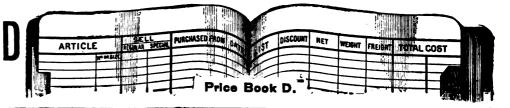

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. Page, 4½ x 8 inches.

FOUR EDITIONS:

C, 200 pages, \$1.00 C F, 200 pages with flap, • C 2, 400 pages, -1.25 1.50 C F 2, 400 pages with flap, .

Suitable for deak and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. Page, 5x8 inches

FOUR EDITIONS:

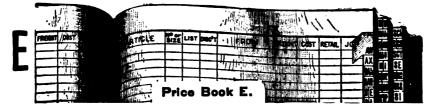

INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, AU turn to CH! turn to For Chisels, For Iron, turn to IRO " Irons, " Parers, Apple PAR " Cutlery, CUT IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather,

Stoves People Use in Foreign Countries.

STRANGE COOKING AND HEATING APPLIANCES AMONG FAR-OFF PEOPLES.

The State Department has just published reports from Consular officers showing how people in all parts of the world do their cooking and heating. The information was elicited in response to inquiries from stove manufacturers about the use of stoves in foreign countries.

One of the reports deals with Algeria, where people do not use heating stoves. Cooking stoves are used only by hotels, restaurants, schools, hospitals and troops, and in the private houses of foreigners. The natives use open fireplaces. This is not because the climate is tropical, for during four months of the year heating is necessary in almost every house. The principal fuel is charcoal, coke and wood. Laundry work is never done in ordinary houses, and there are no ovens for baking bread. The bread, rolls, biscuits, and even roasts and baked fowls are supplied by the baker.

"With reference to fuel," adds Consul Kidder, "there is still another article which is extensively used everywhere for cooking. It is called 'broussailles,' and consists of the small limbs, twigs and branches of trees; in other words, brush, or whatever would go to make up the brush heap in the United States. All domestic stoves or ranges are built with what is called a 'broche,' an outside arrangement for roasting, something like a spit. It obviates the necessity for a large fire, and with a small quantity of 'broussailles' and a few coals it can be made to do most ordinary work. This arrangement has many advantages which might be considered in America, both as regards economy of fuel and quick service."

In British South Africa they use a square cooking stove, with two and four holes, a small fire pot, an oven, and a water heater on one side of the fire-pot. This last is a part of the stove and framed in it. The stoves are set up on brick work within the fireplace, the brick foundation being the full width of the fireplace and about two feet high, while on the open side of the stove the brick work is built up to the top face of the stove. The housewives do not bake their own bread, but depend on the bakers.

In Madagascar there are no stoves of any kind, and nobody wants them. Cooking is done at an open fire out of doors or in an outhouse, the clay or iron cooking utensils being placed upon tripods or Dutch ovens, and wood, grass or charcoal being used as fuel.

MOROCCO WITHOUT STOVES.

Morocco is also absolutely without stoves. There are no means of heating in that country, and cooking is done in charcoal furnaces.

Sierra Leone is less primitive in this respect than many of the other African countries. Oil stoves are popular there. The old-fashioned stove is not, because, as Consul Williams says, "cooking in this country must be accomplished with as little heat as possible." Nevertheless, it becomes cold enough in the months of July and August to make a heating apparatus necessary, and the cooking stove is then made to do double service. It is in these months that the heavy cold rains take place.

The cooking stove of the native British Indian is a fixture of the kitchen, and is built in with the building. Consul Fee at Bombay estimates that 99 per cent. of all the residential buildings and bungalows have these stoves. "The kitchen," says he, "is always in that part of the bungalow known as the servants' quarters,' and is never frequented by 'sahib' or 'mem-sahib' or members of the household, as is a common practice in England and America." The stove is built of brick, mortar and cement. It is more of a fireplace than a stove, and consists of two or three round rings on which to set pans and kettles, walled in with brick and mortar; an open space in front for a door, and a hole in the back, through which the smoke may escape into a pipe or into the kitchen.

The use of heating stoves is increasing among Chinese of the wealthier classes, and among those who have either traveled abroad or mingled with foreigners, but most Chinese houses have no heating appliances of any kind. "Even in the largest yamens," says Consul Goodnow of Shanghai, "and where the officials are old and feeble, the only artificial heat in Winter is by means of charcoal fires in open brasiers. Protection is effected against the cold by the increased quantity of clothing worn." Consul General Wildman, in his report, adds with sarcasm: "Chinese do not use iron stoves of any description, and it would take several wars like the present one to convince them of their utility."

"Sol" Berliner, our Consul in the Canary Islands, evidently had a hard time getting the information wanted. The following are extracts from his report:

"Value of Imports.—It is impossible to find out the total value of imports, as no statistics are kept.

"Duty.—There are no customs or other kinds of tariff dues. "Fuel.—The fuel used is coal, charcoal and wood, petroleum being too dear. Charcoal is most consumed."

For heating and cooking the Japanese use the "hibachi," which consists of a large earthenware bowl or wooden box, partly filled with ashes, on the top of which is placed charcoal. This fuel, when ignited, provides a slow fire of low heating qualities, which throws off a gas. "At no time pleasant," says Consul Davidson in describing this gas, "and under some conditions very dangerous." "One form of 'hibachi,'" he adds, "the top of which is partly covered by bamboo strips, is used for bed warming, being placed under the coverings. Frequent fires, sometimes accompanied by loss of life, have resulted from the overturning of these little heaters by careless sleepers. The Chinese, especially old men and females, are frequently seen strolling about in Winter with a small basket containing a charcoal fire resting inside of the garments next to the stomach. This little body stove they hold in position with one hand, which they have withdrawn from their sleeve. To a newcomer, these apparently armless wonders with protruding stomaches are, until some explanation is forthcoming, very perplexing subjects."

THE KOREAN SYSTEM.

The Koreans heat their houses by an ingenious system of flues under a stone or cement floor covered with the thick, strong, oiled paper for which the country is famous. By this means a little wood or brush serves to cook the two daily meals and at the same time to heat the floor upon which the people sit and sleep. The houses are built directly upon the ground and are of one story, and fires are kept up in Summer to prevent dampness caused by the heavy rainfall. Houses of the better class, however, are beginning to be fitted with at least one large room containing a board floor and an American heating stove.

In Australia heating stoves adapted for single rooms are used to a large extent, but central steam and hot air heating are practically unknown. "In most rooms," says Consul Gencral Hurst, "stoves of glazed tiles are set, remaining the year round, forming as much a constituent part of the dwellings as floor or ceiling, and usually of a color and decoration to suit the plan of the apartment. Not considering the point of ceramic ornamentation, it should be remembered that these tile stoves are regarded in Austria as superior to iron stoves on account of the great economy of fuel possible, not more than a quarter or a third of a bushel of coal being necessary to heat a moderately sized tile stove. Once heated, such a stove remains hot for ten or twelve hours and diffuses a mild and equable warmth."

Consul Hossfeld, at Trieste, declares that "there is in the Mediterranean countries a widespread prejudice against all artificial heat, such heat being believed to be a prolific source of ill-health and general effeminacy." In consequence of this prejudice, he says that not one house in three in Trieste can

be heated, and not more than one in six actually is heated. "Less than a quarter of a century ago," he adds, "nothing was thought of letting children suffer in cold schoolrooms." In 1898 a Trieste dealer, as an experiment, imported from Germany a few asbestos-lined stoves, built on the American plan. "Though the stove was a fine and attractive article, it met with no demand here, and the dealer has the consignment still on his hands," says the Consul.

The Belgians use stoves unlike those of other countries. Consul General Lincoln describes a Belgian stove as a simple cylinder of sheet iron, from 1½ to 3 feet high, and from 6 to 8 inches in diameter. It is placed on a plate resting upon a swinging arm fixed to the bottom of the fireplace. When it is necessary to fill the stove the arm is swung out, the stove removed, filled with a small nut coal like our anthracite, replaced on its swinging base, lighted at the top, swung in, and inclosed in the fireplace. "The cooking stoves in this Consular district," says Consul Winslow, of Liege, "are very crude, and should an American housewife be called upon to prepare an ordinary meal for two persons on one, she would declare that it was next to impossible to do it, to say nothing of baking cakes and pastry. All the bread is purchased from the baker."

Consul Thackara, at Havre, thinks that the French will never use stoves as Americans do, because the French do not like to keep their rooms very warm in Winter. Furnaces are almost unknown in private houses, flats, offices or public buildings, and steam and hot water heating have come into use only within the past two or three years. In the North of France they use cooking stoves, but in the South the cooking is done in a large open fireplace, the meats and fowls being roasted on a spit, and steaks and chops broiled over charcoal. "Marseilles residences," complains Consul Skinner, "and those of Southern France generally are provided with cavernous fireplaces, which consume large quantities of wood and send all the heat up the chimney." Consul Covert, at Lyons, says that gas ranges are coming in, but landlords never supply gas pipes to their houses, arguing that if gas pipes are placed between the walls there is no way of reaching them to stop up a leak.

STOVES NOT POPULAR IN GREECE.

The Consuls in Greece unite in declaring that the Greeks are prejudiced against heating stoves, believing that they are injurious to health. But Consul McGinley, at Athens, says that in recent years heating stoves and grates have become popular among the well-to-do classes.

The American stove is almost unknown in Russia. "Heating is done here," says Consul General Holloway, "by means of horizontal brick ovens, built in the corners of rooms, reaching from the floor to the ceiling, the outer surface being covered with glazed tile of attractive designs. Fires are built as in ordinary bake ovens, the draught being closed as soon as the fuel is consumed. The outward surface becomes a radiator and furnishes a pleasant heat that lasts twenty-four hours. A few of the more modern buildings are now heated by furnaces and steam. The walls of Russian houses are very thick. Each window has a double set of sash, the joints and cracks being hermetically sealed in the Fall and left so until late in the Spring."

Consul Bowron, at Carthagena, says that heating stoves are not used throughout the greater part of Spain, but are badly needed. "With an indoor temperature of 50 to 60 degrees F., and no fire, it is too cold to be either pleasant or healthy, and in this town I have often seen families sitting in their houses covered with wraps and shivering. The only attempt at a fire is a few pounds of spent charcoal in a brass pan, ('brasero') which will raise the temperature of a twelve-foot room about two degrees in the course of five or six hours. Further inland the ground rises and the cold is proportionately expeater. In the villages people cook over an open fire on the hearth, where they burn rosemary and other similar under-

brush, which grows wild on the mountains and uncultivated lands. This fire is kept burning all day, and the folks sit about it stirring up the embers and throwing on just sufficient fuel to keep it alight. Of course most of the heat goes up the wide chimney."

Cooking stoves are unknown and the cooking is done over little charcoal fires. Baking or roasting is out of the question. In the cities all bread is bought at the bakeries. In the villages people mostly make their own, but they take it to the bakery to be baked. "A leg of mutton or a turkey," says Mr. Bowron, "goes to the bakery, as a matter of course, and at Christmas they are numbered as they go in, and checks given for them to avoid mistakes. Cakes and pies are unknown. Hot water in quantity is almost a luxury, as it is only obtained by setting a pot or kettle of cold water over the little fire and waiting for it to heat up."

"A few years ago," adds Consul Harmony, at Corunna, "an attempt was made to introduce in Galicia oil-heating stoves of German manufacture. The results proved unsatisfactory. That anti-hygienic and absurd contrivance called 'brasero' will not be easily discarded by the great majority of this people, who stubbornly adhere to old habits and ideas." "In many parts of Spain," observes Vice Consul Reed of Madrid, "the 'stove' in general use is made from an empty petroleum oil can by cutting a hole near the bottom on one of the sides to make a draught, the can being lined with gypsum to the pleasure of the constructor, giving the fire space accordingly. I may add that the stove thus made, primitive as it is in its theory, homely and curious as it is in its appearance, is effective in purpose and costs the equivalent of but a few cents of our money."

In England open fire-places are almost the only means of heating houses, and hotels, public buildings, and office buildings are heated in the same manner. "Stoves," says Consul Boyle, at Liverpool, "are almost unknown in England." As for Ireland, heating and cooking stoves are used very extensively, according to Consul Swiney of Cork. Open grates are used in Scotland, and except in country houses one seldom sees a heating stove of the coal-burning kind. Of Mexico Consul General Barlow reports:

"If the natives desire warmth, they go into the street and wait the coming of the sun."

THE BRAZILIAN "FOGARO."

In Brazil every house has a small charcoal burning firepot called "fogaro." They are made of cast iron, and are cylindrical for about two-thirds of their height, "at which point," says Consul Furniss, at Bahia, "they flare out and become basin-shaped, forming a reservoir, the bottom of which has a small grate, upon which is built the fire." Pots and pans are placed directly on this fire. The cylindrical portion of the stove serves as a flue for draught and to catch the ashes. "As the greater part of the Brazilian's diet," says Mr. Furniss, "is either fried or boiled, with a decided preference for the latter method, these stoves serve their purpose admirably, and are much cheaper than a stove as we know it, with the added advantage that they take up less room and can readily be moved from room to room, which makes them of great convenience to those having small quarters."

In Colombia they do their cooking on a contrivance called an "anafe," a shallow iron frame of circular form, with strips across the bottom. These utensils are from ten to fourteen inches in diameter, are made of heavy hoop iron two or three inches in width, and are supported by three legs, each about nine inches in length. They cost from 1.60 to 2 pesos in Colombian paper money, or from 10 to 12½ cents in United States gold.

Uruguay shares the Mediterranean prejudice against stoves on the ground that they are unhealthful. It is believed there that heat in the house conduces to maladies of the throat and lungs, and 95 per cent. of the houses have no heating arrange-

ments. "Yet," says Consul Swalm, at Montevideo, "during the Winter season, from April to October, the dampness in the houses is far more unpleasant than crisp and snappy cold. With the frequent and heavy rains, the walls become very damp, and clothing or books must not touch them, or a mold will form. Such a condition has for one of its results an enlarged percentage of pulmonary troubles, and a death rate out of all proportion to the general salubrity of the climate."

The following is the report, in full, of Acting Consul Childs at Zanzibar:

"Zanzibar.—Referring to the instruction to prepare a report on heating and cooking stoves, I beg leave to state that stoves are never used in Zanzibar. This, I think, entirely covers the subject."

The Gambling Spirit.

The desire to get rich quickly is akin to that which wants to secure something for nothing. There is a shade of difference but the similarity is there. The merchant or mechanic sees no way to wealth or even competence excepting through the legitimate accumulations of an extended period in which the fruit of honest effort comes little by little. It is step by step, dollar by dollar, year by year that legitimate gain must come to persevering toilers in the great majority of cases. And with the uncertainty connected with all things human, very many will not accumulate money or property, though industrious, prudent and persevering.

This is a money age, a time when great commercial and financial events are common. Business is transacted on a gigantic scale. Commerce is international, taking hold of the ends of the earth. Very many men are possessed of fortunes which a generation ago would have been deemed actually fabulous. Individuals and corporations control immense interests, involving tremendous capital and affecting all parts of the civilized world. The financial kings and commercial barons of the day exercise wider and more absolute sway than many powerful monarchs of olden times possessed. Everything seems to be done on a large scale and nothing in the ordinary line is deemed worthy of attention. This is the way many view the scene, as they take a general view of the situation and try to read the signs of the times as this era will bear record in history.

The press of the present day exalts the spirit of commercialism and bestows lavish honors upon the rich and successful. Young men and women see the conspicuous ones held up before them as examples. In hundreds of instances they read how the young man starting out without a cent has accumulated millions of dollars at middle age. At the same time they frequently hear it said that no man can hope to become a millionaire through legitimate trade profits. They put this and that together and what is the logical conclusion?

Before a young men starts out in the world for himself. he has had time to study out worldly matters and business prospects in a great many ways. His speculations and anticipations are stimulated by the myriad suggestions of current happenings and revelations in the business world. He finds that some of the successful ones have paved the way to great wealth by remarkably valuable inventions, a course not open to him in his dreams. He sees many helped from the start by great inherited wealth, and cannot hope for any advancement in this way. Others seemed to have been wonderfully favored by circumstances which put special opportunities in their way at every step; but the possibility of similar good fortune seems too dim to offer them any comfort. They have concluded, long before entering upon their own active life-work, that in all the legitimate ways through which men starting poor have become rich, only a small part of the great fortunes of the day have been made. The moneymaking of the day is seen by them to come largely through the two great channels of trickery and sharp dealing with others, or the uncertain lines of miscellaneous speculation. The fresh, young mind of the honest young man naturally

shrinks from dishonesty and fraud, but speculation has not yet been shown us as necessarily evil.

The habit of gambling at cards, of winning money at the gaming table or by any game of chance whatever has readily been placed in the list of vicious practices. It has been classed with stealing pure and simple. Our laws forbid it. But what myriad forms of speculation exist in this present day, against which ordinary business men, with standing in the community, raise no voice of protest. The gold seeker, hunting for sudden fortune through mining with its risks and hazzards, stands on the boundary between legitimate toil and speculative effort, often with one foot on either side of the line. Speculators in real estate and great staple commodities come next, and the safe ground is soon left without compunctions. The modern dealing in grains, provisions and stocks is almost wholly speculative, and a vast amount of the transactions in this line are purely games of chance-properly called gambling. In this class of hasty rushing after money some of the most popular occupations of our age must be ranked. Then comes betting, where no attempt is made to disguise the game as either moral or legitimate, and these days men-and even women, too-bet on every prominent event in which results are doubtful. How strange it seems that beside the names of those who have become wealthy by such means, the papers do not mention those who have met loss, disaster and eternal ruin!

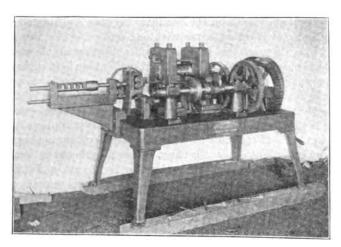

An object or event is conspicuous only as exceptional. A man is rich only by comparison, showing that the great majority are not. But if the majority are not in the walks of safe, happy living, then life is a failure. The winners of great fortunes in speculative life are the few exceptions among very many losers. He who chooses this course must know that the odds are greatly against him. There is no wise course to follow, excepting where the results may be safely counted on because of the laws of cause and effect. No one can afford to put his life into a game where only one wins where twenty fail. Look up the statistics of our large cities to see what we mean. All speculation is risky. Much speculation is gambling. Gambling is wrong, unsafe and demoralizing. Happiness and real success must be in the path of morality and in conformity to the code of written and unwritten laws, human and divine. Great riches can be possible for but the few, and it proves a blessing to but a small part of those having it. Honest endeavor, in legitimate channels, promises all the returns we should covet.-Hardware Trade.

Automatic Staple Cold Roll Pointing Machine

This is a machine for manufacturing staples with diamond, fleam, chisel or square end, taking the wire directly from the coil and producing the completed article. It is also applicable to the pointing of picture nails, flesh hooks and other long articles such as are commonly done by a blacksmith, requiring the use of heat, which greatly injures the finish, when it is required that the finished article be bright. This work can be done much more rapidly with this machine, effecting a saving of from 200 per cent. to 500 per cent. in the expense beside finishing the work in a uniform and very superior manner. The machine is also applicable to the manufacture of a variety of wire articles with the use of the proper formed tools. When using wire in the coil it is entirely automatic, its action taking the wire directly from the coil, straightening, cutting the wire into the required length and forming thereafter. The operation of the machine is as follows:

The wire is fed through the straightener shown on the left of the cut, by means of the feed rolls immediately in front thereof. A shaft parallel with the swadging rolls running across the front of the machine in standards is equipped with cams operating sliding mechanism which cuts off and forms the staples into the U shape, also with a cam on the end thereof properly timed, which operates the lever shown under the feed rolls, producing a pressure of the rolls upon

the wire, feeding it forward to the solid stop, after which the other mechanism operates. The shaft is equipped with a gear on the end thereof meshing into an intermediate shaft. The intermediate shaft and the lower roll shaft have elliptic gears thereon meshing into each other; thus by the revolution of the first mentioned shaft and proper timing of the elliptic gears the swadging rolls are run very slowly at the time of swadging, thus admitting of the increased speed of the machine over those formerly built, as the swadging limits the

AUTOMATIC STAPLE AND CHAIN COLD ROLL POINTING MACHINE.

speed of the machine. Therefore, by the use of these elliptic gears the speed of the swadging dies remaining the same as in the machine formerly used, increases the time of the straightening, cutting and forming in proportion of two to one, thus producing twice the number of articles per minute as formerly made. The roll housings are constructed with large bearings and adjustment in such a manner as to insure the least possible wear. The swadging rolls are provided with guard rings protecting the edges of the swadging dies in such a manner that when the rolls are revolving without any articles being swadged the edges thereof will not run against each other, destroying them. All the tools are easily accessible and are in plain sight during all the operations. A powerful friction brake, operated by a lever enables the machine to be quickly stopped in case of breakage of the tools, or for any other cause, the handle of which brake shows at the end of the machine. The number of articles produced per minute on this machine is from 60 to 75, depending on the size of the wire being used. The machine illustrated is built for making staples 21/2 inches long from No. 5 B. & S. gauge wire as the largest and all intermediate sizes down to 1 inch in length as illustrated. The larger size machine is provided for staples above No. 5 wire. All of the cutting and forming mechanisms are removed and replaced by the necessary hoppers and feeds when the machine is being used for the pointing or swadging of any other articles. Any information required will be cheerfully furnished by the builders of this machine, The F. B. Shuster Co., of New Haven, Conn.

The Manufacture of Paper.

The first paper manufactured in America was made at a small mill in Philadelphia in 1690, since which time the paper industry has been a feature in the manufactures of the country. The demand has grown with the development of the country, as paper is becoming more and more an indispensable commodity. The hand-made papers of early periods have given away to the more easily produced, better, and hand-somer paper of to-day. It is a noteworthy fact, however, that the principle on which paper is now manufactured is the same as that employed by the Chinese centuries ago. The demand for paper and the necessity for a good product at a low cost stimulated the inventors to activity, and the result has been the substitution of wood pulp for the paper ingredients used by the original manufacturers. In the United States wood

soon became the main factor in the paper-making business, and the article made from the fiber is in many respects equal to, and in some respects superior to, any other paper. The quality is being improved continually and the methods of manufacture being changed with a view to making the product better and less expensive.

Civilization has created new uses for paper, and what was originally a luxury has become in its improved form an absolute necessity. The habit of correspondence has multiplied with increasing rapidity under the stimulus of lower postal charges in the United States. The demand for newspapers grows daily greater, while books and pamphlets make tremendous drains on paper manufacturers' stock. These outlets alone for the paper product would keep many large plants busy. For newspapers the amount of paper used in 1900 was millions of tons. In the book business the amount consumed may be estimated from the fact that two novels published in the United States during the course of that year consumed in their manufacture 1,500,000 pounds of paper. But aside from these there are other heavy drains upon the product of the paper maker, for there is hardly a branch of trade which does not require paper in some form, and in some cases the transaction of affairs would be an impossibility without it.

The demand has brought about a rapid growth in the paper industry throughout the world. Some idea of this may be gained from the following figures: The yearly output of paper and allied products in France has grown from 42,000 tons in 1851 to 400,000 tons in 1899. In the latter year Great Britain produced about 800,000 tons and the United States put about 2,500,000 tons of its own manufacture on the market. As to the consumption of paper, statistics show that in 1873 Germany led in Europe, with 13.2 pounds per capita, followed by Belgium with 11.2 pounds, Great Britain, with 11 pounds, and France, with 7 pounds. Since then, Germany has increased to about 20 pounds per capita, while it is estimated that the United States uses 50 pounds per capita.

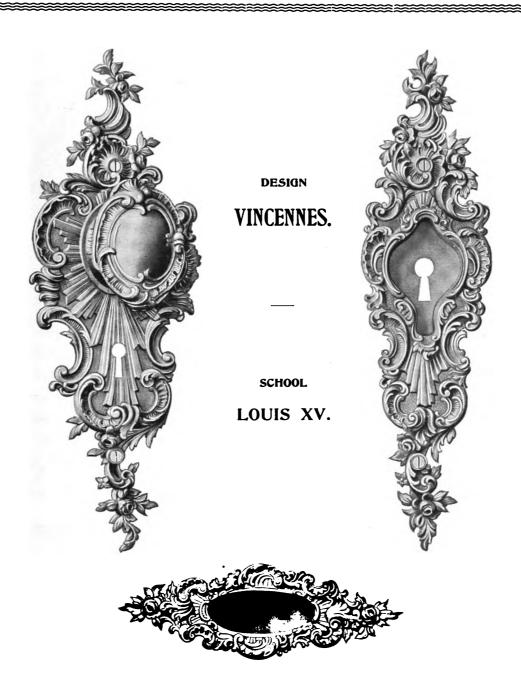

Statistics show that the United States not only consumes more paper than any other country, but that it is now reaching for the markets of the world. But a few years ago the exports of paper were insignificant, but they now attain a yearly valuation of \$6,000,000.

The manufacturers believe that within a few years the amount of wood pulp exported will reach a valuation of from \$15,000,000 to \$20,000,000 yearly. The exports of wood pulpin 1895 amounted to \$2,135,000 and grew gradually until 1899, when they were valued at \$5,477,000.

There are at present about 1,100 paper and pulp mills in the United States, and most of these plants are so arranged that they can run interchangeably on various grades of paper. The International Paper Co., which has large holdings of woodland and water power in several States and a capital stock of \$45,000,000, controls and manages thirty-six of these mills. Although the output of this concern is enormous, it holds no monopoly of the trade and has competitors in many States. One of the manufacturing concerns connected with this company has facilities for producing 10,000,000 paper bags for merchandise per day.

The steady growth of the paper-making industry, and the use of trees to furnish raw material, have caused much discussion, and it has been even urged that if the drain continues the forests of the United States will become exhausted; but manufacturers who have studied the problem maintain that the paper industry is not a menace to the forests. The industry is not only a great consumer of raw materials, but it contributes largely to the support of allied industries, which employ great numbers of laborers. It is an important factor in the transportation interests, it being estimated that this industry furnishes railroad and steamship companies about 7,500,000 tons of freight a year. It has greatly enhanced the value of water powers, has added to the value of timber lands by creating a permanent demand for wood, and it makes a market for hundreds of thousands of tons of rags and other waste which would otherwise be useless.

ARTISTIC HARDWARE.

Designs in all the different schools of art, correct in detail and true in artistic feeling Special designs made to order from our own or architects' designs.

The most complete line in existence. We make everything required to trim buildings of all kinds, and in a large variety of styles at different prices. Dealers in Corbin goods can give their customers a wide range for choice, artistic effects in color and design and fidelity to the principles of the different schools. A full line of builders' shelf hardware.

OPENING OF CONVENTION.

Promptly at 9:30 a. m. Wednesday, Oct. 9, the musical voice of Secretary-Treasurer Fernley was heard in the lobby of the Hotel Hollenden, Cleveland, announcing that the first session of the Seventh Annual Convention of the National Hardware Association was about to be called to order, and requested that all delegates and visitors go at once to the new auditorium of the hotel where the meetings were to be held. The auditorium was tastely decorated with the national colors and while not entirely completed, presented a very beautiful appearance.

President Shapleigh called the meeting to order with the following remarks:

PRESIDENT SHAPLEIGH'S OPENING ADDRESS.

President:

Ladies and Gentlemen and Delegates to the National Hardware Association and Friends-It gives me great pleasure to welcome you on behalf of the National Hardware Association to this convention, and the great number of delegates we have assembled here is an evidence to us that the prime object of our association, which is to create better feelings toward each other and with the manufacturers, has proven a success and is being taken advantage of. Another pleasant feature of these gatherings is, that men from all quarters of the United States meet here to renew the pleasant friendships that have been formed at these meetings in years past. Here, in the city of Cleveland, seven years ago, our shell was formed, and it is pleasant again to meet here after we have arrived at our full strength and vigor. We appreciate very much indeed, the hearty welcome that the manufacturers of Cleveland are giving us, and we thank them very much for it.

Rev. S. P. Sprecher, of the Euclid Avenue Presbyterian Church, asked Divine guidance in the deliberations of the convention, after which one verse of "America" was sung, all present lending voice to that grand old national anthem.

Mayor Tom L. Johnson being unavoidably absent from the city, his place on the programme was taken by Rev. H. R. Cooley, director of charities of the city of Cleveland, who tendered the freedom of the city in the following well chosen

REV. MR. COOLEY'S SPEECH.

Mr. President, Ladies and Gentlemen and Delegates to the National Hardware Association—I regret very much that our Mayor is unable to be present. He is not in the city this morning to welcome you on behalf of our city to the freedom and to all the courtesies which it is possible for us to extend to such a national organization.

I was pleased this morning to see the good fellowship and the good will among men who are supposed from some standpoint to be opposed to each other. It certainly is a good thing to get together, to exchange experiences, to "swap" stories and thus to get new ones, to compare methods and ways and plans in a spirit of general good will and fellowship, in a great business. We hardly appreciate the advance which has been made. In a visit to the Northwest, I found, in the early stages of that great Hudson Bay Co., it took seven years to make an exchange sometimes, seven years from the time the goods went out of London, before they came back to London. Take the Oriental countries and see the rude methods of the trade in the great bazaars, how the Turk sits within reach of all his goods, and then pass into one of our great wholesale houses. We realize how far we have gone in the advance, and toward this great administration of human affairs. It is this body and their work which has made possible our great civilization—the gathering of the people. We sometimes look at the engine and the railroads and the steamships. We go through a great store and say what a wonderful store it is, but we forget the men who run the things they produce, men who have gathered together these materials, men who have classified them and organized the great service, and so we are glad to welcome you to our fair city, though not as beautiful as in June, for Cleveland wears her choicest dress in June.

It is certainly very fitting that you should come back to the city of your birth. We are glad to see your great growth. It speaks well for the future, and we trust that your stay may be a profitable one. We know it will be for us. Sometimes, when we receive guests into our homes, and they depart after we have entertained them, we feel that we have received a great blessing; and that is what I think will come to us, to this municipality, after extending to you our hospitality. We are sure that we will be richer in enterprise and in thrift than before you came. And so, in behalf of our Mayor, I

am very glad to bid you welcome to our city.

Charles L. Pack, President of the Cleveland Chamber of Commerce, extended a cordial welcome to the city of Cleveland to the delegates, as follows:

ADDRESS OF CHARLES L. PACK.

I tender you the cordial greetings of the business interests of Cleveland. We welcome you gentlemen to Cleveland, and we are glad that your great organization meets in our city. The National Hardware Association has the respect of the whole country. Your Association is great because there is inherent in it something that makes men energetic.

Trade organizations are of ancient origin. You are young in years, but you have a large element of that aristocracy of merit—the only true aristocracy in this country.

I can tell you nothing about Hardware, for I am a wooden man. I am not going to try, but I can assure you that we know you are doing a great work for the manufactures and commerce of this broad land. Your goods are sold at home and abroad. I am sure you believe in the great policy of reciprocity which was so ably advocated by that great, heroic man—the friend of the manufacturer and artisan—we have so recently lost, William McKinley.

I hope the day is near at hand when we may see your

American Hardware loaded in American ships sailing under

Old Glory to every part of the world.

We rejoice that we are to see you all later at the Chamber of Commerce. May the great success of your meeting in Cleveland symbolize your constant prosperity for ever and

Mr. Pack was followed by S. D. Latty, of the Kirk-Latty Mfg. Co., who, as chairman of the Committee of Cleveland Manufacturers, welcomed this important body of jobbers to the hospitalities of the city.

ADDRESS OF S. D. LATTY.

Mr. President, Members of the National Hardware Jobbers' Association, Ladies and Gentlemen-It is with peculiar pleas ure that I extend to you on behalf of the Cleveland manufacturers a most hearty and cordial welcome.

Some seven years ago your Association was born at Cleveland, and I think that I voice the sentiment of all Cleveland manufacturers when I say that we feel as a parent toward

your organization.

We take a peculiar interest in your Association, and I hope the result of legislation at your meetings for the holding of future conventions will be that we shall see you in Cleveland more frequently within the next seven years than we have in those that have just past.

I wish to take advantage of this opportunity to make the

following announcements:

The time designated for our drive to-morrow, Thursday, has been changed from 2 o'clock to 1:45, standard time, and I wish to urge upon everybody the importance of being on hand promptly at the time designated, 1:45.

I would also request that the ladies adjourn to the parlors on the second floor of this hotel just prior to roll call for the purpose of meeting the Local Manufacturers' Ladies' Recep-

tion Committee.

I would also state that we have been obliged to change the hour of the smoker this evening from 8 o'clock to 8:30, standard time.

I would also state that those who have not already secured badges and tickets for the several entertainments, we would like to have them do so at the earliest opportunity. These may be procured at the desk in the lobby of this hotel, the manufacturers' headquarters.

In closing I again wish to extend a hearty and cordial welcome, and I hope the result of your meetings while in sessions here will be eminently beneficial to the Hardware job-

bing interest in general.

The fraternal delegates representing the Canadian Wholesale Hardware Association, were then introduced, consisting of William Starke, of Howden, Starke & Co., Montreal, President; Thomas B. Lee, of Rice, Lewis & Co., Ltd., Toronto, Vice-President, and James Hardy, of Jenkins & Hardy, Toronto, Secretary-Treasurer. The chairman, Mr. Starke, held the attention of the convention in a short address, as follows:

ADDRESS OF W. STARKE, PRESIDENT OF THE CANADIAN WHOLE-SALE HARDWARE ASSOCIATION.

Mr. President, Ladies and Gentlemen-It is with the great est pleasure that I am here in Cleveland with you as one of the delegates from the Canadian Wholesale Hardware Association, at this, your Seventh Annual Convention, and I wish on behalf of our Association, to tender its sincere thanks for the many kindnesses extended to members personally and to the Association in general since its organization, which organization was inspired largely by the reports and the continued satisfactory working of the National Hardware Asso-

It was my great privilege to attend your last annual convention in the historic city of Richmond, Virginia, and I assure you that our delegation gained considerable valuable information from the discussions entered into, and appreciated

to the fullest extent your kind hospitality on that occasion.

Our Association regretted exceedingly not having had the opportunity of reciprocating, to some extent at least, on the occasion of its last annual meeting, held in Toronto, on September 13th. Believe me it would have given our members

great pleasure to have had your genial secretary, Mr. Fernley (who honored us with his presence at our second annual convention held in the city of Quebec, in 1900), and any other delegates who might have accompanied him. I again extend the invitation to you to appoint delegates to attend our next annual meeting, and trust it will be convenient for them to

be present.

We have had in Canada three successive prosperous years in the Hardware trade—this year evidently being the banner one—and I believe this condition is not restricted to Hardware, but is general and extends beyond our borders. Trade has been and is good; prices are well maintained; the jobbers are working harmoniously in their own circles, and the manufacturers, I think, are realizing more and more that the proper channel through which to distribute their product is through the natural one, viz., the jobbers. Concessions in the matter of manufacturers confining more closely their sales to the jobber, and also increases of differentials have been obtained on many items during the present year.

Our lumbering, dairying, fisheries and manufacturing interests have been very active and with the good, I might say abnormal, crops (especially in the Northwest), demands are created which falls to the lot of the jobber to satisfy; and further, collections are good and very few failures are noted. I am pleased to note that these satisfactory conditions appear also to exist in your country, especially so in the Hardware and metal branches of industry. Long may it last!

JOHN C. KOCH, OF EXECUTIVE COMMITTEE.

Since the last convention in Richmond, our countries have each sustained a great national loss, viz., the death of our beloved Queen Victoria, and your honored and respected President, William McKinley. The sympathy of each nation at these times proved once more that the Anglo-Saxon race, even if divided on territorial lines, is one great family.

Gentlemen, in conclusion, let me thank you for the kind invitation which enables me to attend this convention.

James Hardy, Secretary-Treasurer of the Canadian Wholesale Hardware Association, next addressed the meeting.

Mr. President, Ladies and Gentlemen—It affords me great pleasure to be amongst you once more, and I am sure that I can only rehearse the words of another speaker of the benefits we have all received from our attendance at your various conventions.

I regret that Mr. Lee, the Vice-President of our association is not present here to-day, but hope that he will be here in time for the banquet on Friday. Our association in Canada is not as large as yours, but we are making very satisfactory progress. We have one advantage, we think, over you here—namely, that whilst we are not so large, we are, by that reason, enabled to make arrangements with the manufacturers and also amongst ourselves as to selling prices. We have done considerable in that way, and I think every effort we have so far made, has tended very considerably toward the enhanced profit of the jobber. We realize also, that nothing can be

done without co-operation, and I think from this point, I cannot add anything more than just to read to you the few words that our retiring President gives in his address, which are as follows:

85

"As each year passes, I am more strongly impressed with the necessity of co-operation. We are mutually dependent on one another. Nearly all of the benefits which come from our civilization, come because of a concerted action and united effort. We cannot in trade matters help others without helping ourselves; if we remain royal to one in the value of our organization, in times of depression, it will be incalculable."

I do not think there is any need of laying any further stress upon that. There is no doubt that co-operation for all parties is of great benefit. I am sorry on behalf of myself that I will not have the advantage of remaining over to take part in and hear the discussions, as the city from which I come, Toronto, will be honored to-morrow and Friday by the presence of the Duke and Duchess of York. It is a good thing for young men like myself to be at home at such a time. I am sorry that I could not carry out the wishes of Mr. McIntosh when he wrote: "Bring them with you. We are sure they will have a good time." I know something about the Duke and Duchess. I am sure they would only be too pleased to have you come, and no doubt you would have a good time with them. On behalf of myself and the organization for which I appear, I am much obliged.

The hearty applause which followed the addresses of both

W. R. BELKNAP, OF EXECUTIVE COMMITTEE.

Canadian gentlemen spoke volumes of the brotherly feeling existing between these two countries.

The roll of delegates which was then called, showed an attendance of over 150.

On motion of H. H. Bishop, of the Advisory Board, the reading of the minutes of the last convention was dispensed with.

President Shapleigh was then given a pleasant surprise when H. B. Lupton, of the Oliver Iron and Steel Co., Pittsburgh, stepped forward and with a few appropriate remarks presented him with a beautiful gavel of ivory and gold—a gift of the visiting manufacturers.

J. H. Van Newkirk, of the Russell & Erwin Mfg. Co., was elected unanimously as general secretary of the convention, and C. A. Jewett, of the Geo. Worthington Co., was elected railroad secretary.

President Shapleigh calling Second Vice-President Brace Hayden to the chair, addressed the convention as follows:

THE PRESIDENT'S ANNUAL ADDRESS.

Gentlemen of the National Hardware Association of the United States:

The seventh annual convention of the National Hardware

Association finds our organization in excellent condition, full of vigor and life, and ready to carry on the good work so successfully executed in the past.

It is

A SUBJECT FOR INTENSE GRATIFICATION

and pride to all of us, that not for one year, or for any time, has the Association retrograded in the least; founded in conservativeness and wisdom, officered by broad-minded and intelligent men, it has steadily pressed onward toward its goal of usefulness, and is to-day recognized as the model organiza-tion of its kind in the United States.

Thanks are due to all the members who have by their steadfastness and co-operation, aided in bringing this splendid condition to pass. Let us also not forget to thank our friends, the manufacturers, who by their recognition of the worthiness of our motives, and by their aid and counsel, have made effective many of the reforms inaugurated by us, and enabled us, in a large measure, to attain our present high standing.

We do thank them and we welcome them most cordially to our gatherings; their presence here is the indication of their interest in us, which is no less than our interest in themmutual interest must be the password between us.

We meet this year in the beautiful city of Cleveland,

THE BIRTHPLACE OF OUR ORGANIZATION.

the Premier City of the interesting State of Ohio, a State famous in many ways, but in no way so endeared to our hearts as in being the birthplace and home of our martyred chief, William McKinley. May the sweet influence of his broad charity and noble character pervade all our deliberations.

It is not necessary to review the growth and work of the Association; its tribulations and trials, its many discouragements and its sometimes failures; suffice it to say that we stand to-day a great power in the Hardware world, and as great power entails great responsibilities, let us see to it that we use our influence always in a just and proper manner.

THE YEAR 1901.

Since our last gathering in the hospitable City of Richmond, we have passed through a year of prosperity; prices of raw material and also of manufactured goods have remained firm and in many cases advanced, so that the value of stocks of goods to-day is somewhat more than that of a year ago. There has been no flurried or undue excitement in values; trade as a rule has been strong and steady, and conditions now seem very bright, except in the few drought stricken sec-

tions, to whom we extend our sympathy.

This is a pleasant retrospect, but let us not forget that the reverse of this lovely picture is bound to come sooner or later; then we must prove our true worth.

IT IS EASY TO BE GOOD WHEN TIMES ARE PROSPEROUS,

but when trade is dull and values are tumbling down, we are too prone to let all hold go, and add to demoralization by adopting a policy of "Every man for himself." Our association is a strong bulwark against a panicky market if properly used, and if the members work in unison.

THE GIGANTIC CORPORATIONS

which are so omnipotent now, will in times of rapidly declining values, have it in their power to protect the innocent handlers of their wares, by using their vast influence against sudden and radical declines in price. We hope they will avail themselves of this great opportunity, and prove that they can become a strong power for good to the community.

THE OUTLOOK.

The fact that values have not been unduly inflated and that a wise conservatism governed the large combinations of capital, in not pushing prices to too high a level, gives a rosy hue to the business outlook for the future.

Let us also be conservative, let us be loyal to the Association, giving strength to its official actions by a hearty and unanimous support; thus we will benefit ourselves and our neighbors.

BENEFITS OF THE ASSOCIATION.

The work of the National Hardware Association is of a negative and positive kind, and the former although not seen and scarcely heard of, is of as much importance as the latter.

All members become acquainted with the positive acts of the Association, such as when the Secretary has succeeded in establishing a proper differential in price, etc., but very few indeed are aware of the many times how, when some abuse is about to be introduced that would rob the jobber of a previous one or two per cent. of net profit, the officers of the Association, by prompt and wise action, have succeeded in having it abandoned. It is, therefore, our duty to be active and interested members, to correspond freely with the Secretary and President, and to increase the general efficiency in every way possible. Let us all think of how much worse off we would be if there was no National Hardware Association, and each of us renew our loyalty to it.

The activity and usefulness of local and sectional Jobbers' Associations seem to be waning; this is a matter of serious moment and of deep regret. The National organization cannot possibly take their place, and we urge the rehabilitation of those already in existence and the formation of others wherever possible. This has been urged in former reports; it cannot be too strongly pressed and we hope the members will take quick and decided action.

The inactivity in jobbing associations is in sharp contrast to the fine activity in retail associations; we congratulate those retailers who have joined their State organizations, and those State associations who have joined the National Retail Association. We have the kindliest feeling for these organizations; we are all working to the same end, the elimination of the abuses in the Hardware business, and a

"HIGH STANDARD OF BUSINESS METHODS."

They are our friends; we must be theirs. They are one of the strongest links in the chain of proper distribution of goods from the maker to the user; we should therefore each help the other and work together, as far as possible for the common good.

It is gratifying to note that the National Government has made some reform in the postal department by more stringent rules governing second-class matter. I, however, recommend that the resolution passed a year ago, in reference to penny postage, be reiterated, and if passed, that a copy thereof be sent to each Senator and Congressman.

Since our last Convention we have lost by death more than the usual number of our friends and associates. It is the one mournful thought at our gathering, that we shall see their friendly faces no more on this earth, and it is with sorsowful hearts that we now pay our tribute of respect and esteem to the memory of our members who have been called to the great beyond during the year. I will ask the delegates to arise while their names are read:

John S. Lindsay, Vice-President of the James C. Lindsay Hardware Co., Pittsburgh, Pa. Died November 23, 1900.

Hardware Co., Pittsburgh, Pa. Died November 23, 1900.
Cartwright Eustis, Secretary-Treasurer of the A. Baldwin Co., Limited, New Orleans, La. Died December 2, 1900.
Frank Shapleigh, Vice-President of the A. F. Shapleigh Hardware Co., St. Louis, Mo. Died January 1, 1901.
William E. Gibbins, Woodruff Hardware Co., Knoxville, Tenn. Died January 3, 1901.
William D. Supplee. Treasurer of the Supplee Hardware Co., Philadelphia, Pa. Died January 24, 1901.
H. W. Palmer, Treasurer of the Palmer Hardware Co., Savannah, Ga. Died February 8.
Charles Fox Tay, President of the George H. Tay Co., and President of the Pacific Coast Hardware and Metal Associa-

President of the Pacific Coast Hardware and Metal Association, San Francisco, Cal.

W. M. Wyeth, President of the Wyeth Hardware and Mfg. Co., St. Joseph, Mo. Died March 8.

John D. Seeberger, Des Moines, Ia. Died April 19, 1901. Hermann Bahlman, Kruse-Bahlman Co., Cincinnati, O. Died May 12, 1901.

Daniel Curtis Holder, senior member of the firm of Holder

& Herrick, Boston, Mass. Died February 23, 1901.

Harry L. Houghton, Houghton, Clark & Co., Portland, Me.

Died April 20, 1901, while on his way to Jamaica.

Joseph Eikel, Eikel-Breustedt Co., Waco, Tex. Died June
22, 1901.

"THEY HAVE PASSED TO THEIR REWARD."

We are fortunate in having with us delegates from the

CANADIAN WHOLESALE HARDWARE ASSOCIATION;

we extend to them a most cordial welcome and hope they will participate in all our sessions, and discuss with perfect freedom all matters in which they may be interested.

The report of the Secretary-Treasurer will give the mem-

bers the detailed information regarding the work of the Association for the past year, and the report of the Executive Committee will outline the future policy and work; the latter report, as outlaying the scope of the Association's usefulness for the coming year, is of great interest to all. I trust it will be very carefully and thoughtfully considered.

In conclusion I cannot refrain from expressing the regret I feel that Mr. Bindley should have found it necessary to resign, after completing almost two years of splendid work for the Association, and leaving in my unworthy hands the honor of presiding over this important meeting.

Mr. Bindley's administration has always been conservative, wise and energetic, and under his far-seeing guidance we have prospered splendidly. I am sure I voice the sentiments of all, in extending to him our hearty thanks and appreciation of his services.

Every President of the Association has always been wonderfully aided and supported by the uniformly prompt and intelligent co-operation of the Executive Committee with both their time and counsel; I return them sincere thanks.

The Secretary-Treasurer has as ever been the right man in the right place, and his intelligent and active work has been a large factor in our success. May his shadow never grow less.

Mr. Shapleigh's address was well received and was interrupted many times by hearty applause.

Secretary-Treasurer Fernley, in his usual happy style, read his annual report.

THE SECRETARY-TREASURER'S REPORT.

In presenting this, my Seventh Annual Report as Secretary-Treasurer of this organization, I do not propose to inflict upon you a very lengthy report of the doings of the Executive branch of your Association, deeming such a course unnecessary, because of our system of keeping the membership constantly informed as to the work of the organization as it progresses during the year. We find, in looking over our files, that we have addressed the members of our Association, on an average of two and a half (2½) times a week, since our last Convention, and these communications show in detail what has been accomplished.

Our work, as you know, is divided into two (2) classes: First, internal. By this, we allude to the efforts which are

J. D. MOORE, OF EXECUTIVE COMMITTEE.

put forth to induce members of our Association, first, to learn TO REGARD ONE ANOTHER AS HONORABLE MEN;

second, to have introduced into the conduct of the individual businesses represented by our membership, such business methods as will cause the machinery of trade to move with the least friction; third, to use the influence of the organization to the end that manufacturers may find it agreeable and profitable to distribute their goods through proper channels.

The second character of work is that among manufacturers. Under this head, anything which is germane to the object set forth in our By-Laws—namely, "the promotion of more friendly business relations and mutual confidence with manufacturers," has our daily thought.

We are particularly pleased to report that many

MANUFACTURERS ARE DRAWING NEARER AND NEARER TO THEIR JOBBING CUSTOMERS,

realizing that this is by far the most economical method of distributing goods.

During the past year, the "seed" which had been "sown" during previous six years, has gradually ripened, and it may truly be said that the jobbing trade is "reaping the harvest." While a few manufacturers will occasionally violate proper trade ethics by making prices to those not entitled to the same, which are not in harmony with the policy of our Association, even to some extent interfering with the legitimate retail merchant, and offering goods to consumers, yet complaints regarding action of this kind on the part of the manu-

facturers are fortunately fewer than in any previous year. There is scarcely a day that we do not receive a number of letters from manufacturers either operating singly, or through associations, inquiring as to the character of business conducted by certain applicants for prices.

We believe that there is no more

IMPORTANT FIELD FOR OUR OPERATIONS

than this, and that in pursuing a policy of fairness, justice and liberality, we are serving not only the interests of our own members, but also the interests of legitimate retail merchants.

The names presented by these manufacturers are not always those of reputable retailers, but in a great number of cases, parties who are pursuing methods of distributing goods which are inimical to the interests of the retail merchant. We allude particularly to certain concerns who make a point of supplying the consumer, and to those engaged in the department store and catalogue house business. If the principle of

SELLING GOODS THROUGH THESE CATALOGUE HOUSES is a correct one, then there is no excuse for the existence of a jobbing or retail house. But, we take the stand that there is no excuse for the existence of catalogue houses; that they are not a proper avenue of distribution. We think that substantial proof of this lies in the fact that there are only a few catalogue houses in the United States, that several who attempted the business have been forced to retire.

EX-PRESIDENT WM. W. SUPPLEE, OF ADVISORY BOARD.

We strongly urge our members to leave no opportunity which presents itself pass without making a strenuous effort to educate the general public (particularly the manufacturer), along the lines of the policy of our Association—namely, that

THE NATURAL CHANNEL THROUGH WHICH GOODS SHOULD PASS,

is from the manufacturer to the jobber, from the jobber to the retailer, and from the retailer to the consumer.

We would also call the attention of our members to the importance of urging manufacturers of Hardware and kindred lines to recognize the Hardware jobber as the proper distributer, and *not* complicate conditions by attempting to reach the wholesale grocer and woodenware dealer.

PRINTED QUOTATIONS.

Several times during the year, our attention has been called to the system adopted by some manufacturers of notifying their trade on postal cards and other printed communications, of changes in prices. These are very liable to fall into the hands of consumers. In each instance, we have entered a protest and after explaining to these parties the harmful effect of this method, we have received assurances that it would be avoided in the future.

It is well that the members of the Association shall continually impress upon manufacturers the importance of refraining from notifying their trade of changes in prices by this method.

During the early part of the year, our attention was called to extremely low prices made on several seasonable lines of goods by leading jobbing houses, and while as an organization we studiously refrain from entering into price agreements, yet it is our policy, and has been, to use our moral influence on the members of the Association, to maintain manufacturers' established prices; hence, we called this matter to your attention.

MEMBERSHIP.

Our membership shows a slight increase over last year.

RELATIONS WITH RETAIL ASSOCIATIONS.

During the past year we have been made to realize to what a marked extent our Association has benefited the retail

The writer remembers quite vividly the misgivings expressed by some, who, when first approached regarding membership in this Association, hesitated to unite with us, fearing that the retail merchant might look upon our organization as a trust, and he also recalls that some parties at-tempted to make use of the fact that they were not con-nected with any "trade organization." All of these facts nected with any "trade organization." All of these facts were vividly recalled on March 11th of this year, when, by appointment, we met the representatives of

THE INTERSTATE RETAIL HARDWARE DEALERS' ASSOCIATION,

which organization is now known as the National Retail Hardware Dealers' Association of the United States. On this occasion we called the attention of the representatives of this Association to extracts from the reports of our proceedings during the previous six years, showing them to what extent we had been endeavoring to influence, not only our own members, but also manufacturers, to the end that

THE RETAIL MERCHANT SHOULD BE PROTECTED IN HIS ENDEAVORS TO RETAIN THE TRADE OF THE CONSUMER.

and to do this on a basis which would yield him a proper The gentlemen whom we met did not look upon our organization as a trust, but were much gratified to know that they had such a strong arm of defense upon which to rely. A few days afterwards, at a meeting of the Retail Hardware Dealers' Association of a Western State, the president of that association, in his annual address, said:

"Another fact I want to emphasize is that the National Hardware Association, as such, have a keen appreciation of the evils that threaten us, and stand ready to-day to throw the whole power of their organization to assist any reasonable plan we may propose to correct the evils that confront us. Either from within their ranks or without. Remember, there are six prominent jobbers in the United States whose transgressions must not be charged up against the National Association or its members. The one hundred and eightyfive members of this Association stand ready to correct the real abuses they are guilty of when we show them they are in the wrong. We must not only prepare ourselves to do this, but must give them reasonable time to correct the abuses after they are recognized."

We commend the National Retail Hardware Dealers of the United States and the retail Hardware associations of the various States to the consideration of the retail merchant. These organizations are officered by men of ability, and we feel that many of the difficulties which are confronting the retail merchant can be remedied through them.

LOCAL AND SECTIONAL ASSOCIATION

During the year it has been the pleasure of your Secretary-Treasurer, in the performance of his duty, to induce the formation of such organizations wherever possible.

Early in the year we organized the jobbers of the city of Savannah into an association, and at a later date organized the Pennsylvania Wholesale Hardware and Supply Association, which latter organization bids fair to have a very useful

It has also been our pleasure to attend, wherever possible, the meetings of these sectional and local associations. have also kept in constant correspondence with the secretaries of the same, aiding them with such suggestions as have occurred to us from time to time.

We are pleased to report that at the present time the following associations are in existence and most of them in active operation:

The Southern Hardware Jobbers' Association.

The Pacific Coast Hardware and Metal Association. The New England Iron and Hardware Association.

The New York State Association of Hardware Jobbers. The Missouri Valley Hardware Jobbers' Association.

The Texas Hardware Jobbers' Association.

The Hardware Merchants and Manufacturers' Association of Philadelphia.

The Pennsylvania Wholesale Hardware and Supply Association.

The Cleveland Hardware Jobbers' Association. The Nashville Hardware Jobbers' Association.

We again call the attention of local and sectional organizations to the importance of having some one employed whose duty it shall be to look after the interests of the organization. We feel that where these organizations lack in success, it is because they do not have statedly employed a salaried secretary.

PREMIUM FOR ANTICIPATED PAYMENTS.

This is a subject which has been prominently before us ever since July of 1899, at which time the American Steel and Wire Company abolished what had been known as the cash discount, but what we more properly called a "premium for anticipated payment." The action of the concern alluded to was followed by a large number of manufacturers, who felt that if one representative concern could insist on terms of net cash, without any "premium," they also could take the same position.

You will remember that after one year's trial on the part of the corporation mentioned, they deemed it wise to meet the views of the committee of our Association having this subject in charge, and restore, first, 1 per cent. of which they had taken, and a few months afterwards the entire 2 per cent. This forward action on their part was quite speedily followed by a large number of other manufacturers.

This question was considered as practically settled; we gave wide circulation to the resolution which was passed in

the Pittsburgh Convention in 1899, which reads as follows: "Resolved, That it is the sense of the National Hardware Association that the discount, 2 per cent. for cash 10 days, formerly given by the manufacturers of steel and iron goods, be not construed as bank interest, but as a premium for prompt payment and as an insurance or protection of credits, and further that such or similar discount be retained where still allowed, and that we urge its restoration where it has been discontinued."

Unfortunately, during the past year we have found a few other manufacturers constrained to experiment with this dangerous expedient of increasing their profits, and, as the members of our Association know, we have speedily taken up the subject with the manufacturers, as well as with the individual concerns in our organization, and have convinced, in almost every instance, the offending parties that it was to their interest to meet our views. Sincerely hope that our members will stand as a unit on this question.

The taking away of this premium for anticipated pay-

ment in every case means a reduction of our profits. Jobbing houses are compelled to concede 2 per cent. for anticipated payment to their customers, and it would be a hardship to the retail buyers of the country if the jobbers were compelled, through the action of manufacturers, to sell goods on terms of net cash.

TRUE COST.

You will remember that at the Richmond Convention of our Association in 1900, considerable time was devoted to the discussion of this question. We are pleased to report that some of our members have put this plan into operation, but regret that we cannot report its general adoption.

It is useless at this time to go into any discussion as to the merits of the plan; these points have been very fully covered. We hope that during the approaching year, an additional number of our members will adopt the system of adding to the factory cost of goods a proper percentage to cover the expense of distribution, before arriving at the 'true" cost.

On August 6th, the gentleman whom you had elected as president of the Association at the last Convention, and who had served this Association so acceptably as president during the previous year, resigned from the presidency, owing to the fact that certain private interests demanded his attention. The relations which existed between Mr. Bindley and your Secretary-Treasurer made the parting sad, but the fact that you had provided for such a contingency by electing to the First Vice-Presidency the gentleman who is now President of the Association—Mr. Richard W. Shapleigh—revealed the "silver lining in the cloud."

The present chief administrative officer of our Association is the fourth under whom I have had the pleasure of serving. Presidents resign; Presidents retire; but the writer has not felt constrained to do either, feeling more in love with the work of the Association than ever. It is but

fitting that due acknowledgment should be made of the continued confidence which has been bestowed by the members of our Association, as well as by manufacturers, on one who is so unworthy.

It is our earnest wish that through our organization, the distribution of Hardware will become more pleasant and profitable, and that those who have such almost inseparable individuality of interest with us, shall also continue to feel that this organization is of great benefit to them. Thus may we hope to reach the *ultima thule* of our ambition.

As is always the case, Secretary Fernley was received with much applause on the part of those present.

After the adoption of the report a number of very interesting addresses were made on the subject of "How Can Manufacturers of Hardware and Kindred Lines Most Economically Distribute Their Products?"

Hon. D. H. Goodell, Ex-Governor of New Hampshire and President of the Goodell Co., Antrim, N. H., spoke as he always does in a manner which occasioned frequent ripples of merriment and applause. He said:

Gentlemen: Mr. President, and Gentlemen of the National Hardware Association—I come from the Granite State, where the rocks are more prominent, perhaps, than anything else, and I received a title which the gentleman has seen fit to give me, from our people, which some people think is a great thing; but, when we remember that among those rocks we haven't got as many people as you have here in the city of Cleveland, why you can realize it is a pretty small thing! We

EX-PRESIDENT II. II. BISHOP, OF ADVISORY BOARD.

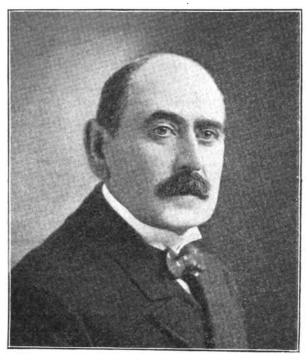

do sometimes send out from our Granite State some men whom we think are of considerable importance, but the State is so small that whenever we raise a man of great importance he bursts his shell like a chicken, and leaves the State—it can't hold him. When we have a Daniel Webster, or a Lewis Cass, or a Chandler, or a Salmon P. Chase, or a Henry Wilson, or a Ben Butler, or a Horace Greeley, they leave us little fellows and carry on the same sort of business. (Laughter.) We sometimes feel as though it were a great responsibility (Laughter) and consequently when we do get any positions there, we think they are of some consequence, and yet some of my neighbors are so mean as to come right to me and say that it does not take much of a man to be Governor of New Hampshire. (Laughter.) If we look to the great State of New York, where a man is named for Governor, or to the State of Ohio, or possibly Missouri, or even to the City of New York for Mayor, or the City of Cleveland, why, we are looking for men who are suddenly pronounced as men for the Presidency. But in all the one hundred and twenty-five years last past, they have not sent up to New Hampshire for but one President, and I do not think that there is any sign of their sending more.

The question is: How the Hardware manufacturers and manufacturers of kindred things shall best distribute their goods, and so I guess I must be a little on that subject rather than discant further on these great things. (Laughter.)

than discant further on these great things. (Laughter.)

I do not know of any way for a manufacturer to succeed unless the manufacturer gets and sells them. I never was able as a manufacturer, to make any money on goods that I didn't sell, and I do not know of any way of a manufacturer producing any goods if he is going around and selling them to his neighbors and friends. He has got to get on to a larger

basis, and do a larger business if he is going to amount to much in the manufacturing world. Why, the great wheat raisers of Minnesota and the corn producers of Iowa, and the peach growers of Georgia can hardly dispose of their products to the retail trade. If you think for a moment, you will realize it is one of the impossibilities—they have got to produce their goods, they have got to produce their manufactures and they have got to sell them to somebody who makes a business of selling such things and who has got large, convenient and excellent privileges and opportunities for doing it. They must sell to some party who has a great elevator and can handle the goods with the least possible expense. They must be transported through these great railroads and other methods of transportation by the government, direction and management of men, who are acquainted with transportation, and then they must be sold in a way that will reduce the price of the goods to a minimum to the consumer and give the producer the maximum price he can possibly get. There is no other way that I have discovered for these men to dispose of their goods than just the methods they are using. these men think, after all, that they are injured, that their business is liable to be destroyed by the great trusts and the great organizations, and great railroad corporations, and all that sort of thing. Now, I tell you, my friends, here, that I am not an advocate of trusts, but I am here to stand before you and to declare that were it not for the great railroad organizations, the great business organizations that we have

EX-PRESIDENT JOHN BINDLEY, OF ADVISORY BOARD.

in this country, we never could have attained to this wonderful eminence as manufacturers and producers in the world that we have. (Applause.) There must be organizations; organizations must be of a large character; they must be upon a broad platform; they must be of a nature that will do things and do them well; they must be managed by men, men of character, ability and honesty. They will secure such men. The demand for great men, young men, who have ability, who have honesty, who have integrity and who are sober in their lives and in their habits, never was so great as it is today. We hear that the trusts organized in this country are liable to ruin the country. My friends, fear not! This great and glorious nation of ours, stands pre-eminently before the world as the leading nation of all countries, and as to progress in this line, we are practically and absolutely, in my judgment, sure to stand still more prominently than we have ever done before.

Now, I advise you, as members of this organization, to maintain this organization; to make it better and more effective than ever before; to make it a clearing-house between manufacturer and jobber, so that we can understand each other better than ever before. I notice that the Secretary is large in some respects (Laughter), still larger because of the information that he is able to obtain from you and the information that he is able to obtain from the manufacturers, and the information that he is able to obtain from the manufacturers of other countries, so that he can be able to instruct on both sides and let the manufacturers and the merchants and

the jobbers be working in harmony in carrying on this great work which we have.

I contend, and my business life has proven it, that the only successful way that a manufacturer can enlarge his business and become great in the eyes of the people and the nation, is by using men to distribute his goods, who understand that business. No man can do all things. A manufacturer has the detail of a manufacturer; he must understand the cost of the goods that he purchases for the product of his manufacturers; he must understand the various methods of producing; he must be a man who is capable of reducing the cost to the minimum, but in doing this, being an investor, as he must be to a large extent, cannot be able to decide his mind and make himself a great merchant. Therefore, he must employ you and men like you who give your thought and time, your attention and ability to the direction of distributing goods to the best advantage. In that way he can make a success, and in my judgment, in no other. There have been a few, and very few, notable cases of manufacturers who have sold their goods direct to the people. They have been, in a few cases, successful, but the number is so exceedingly small that it seems as though the very facts that exist were suffi-cient to prove the position I have taken. The Douglas Shoe Co. has sold shoes at retail, having fifty, sixty or seventy stores in different parts of the country, and have sold their shoes by mail and that sort of thing, and yet, I understand, they made a great success. A few others have been successful on that line, but the number has been so exceedingly small that they have been hardly worth considering. Now, then, the relations between the manufacturers and merchant or jobber should be exceedingly cordial. I do not know that this is the word to use. I am sure that the manufacturer and merchant are co-partners, that their interests are so nearly alike that they should sell with each other and together, not as "tricksters," as sometimes is done, not as though the manufacturer intended to deceive and wrong his customer, not as if the merchant were to break down the manufacturer, for it is of interest to the manufacturer that the merchant should succeed; if not, he can't pay his bills and pay good prices for his goods. It is to the interest of the merchant that the manufacturer should succeed; if not, he cannot produce good goods, such as his customers require, and, therefore, the interests of both parties are identical to a great degree. They ought to be made so, and it seems to me that this organization is likely to render assistance in this direction very largely indeed. Now, there are several things that I might speak of. My speech is a random one.

My business affairs have been successful to a certain extent, not largely so, but so far as I have as a manufacturer attained success, it has been through working on this line. But I was greatly discouraged when I first began to travel to sell my own goods to the jobbing trade, when I was told by many people—perhaps not many, but some—of whom I felt sure I would secure an order for the apple-parers I was making, that it was the "best machine I ever saw; I have never seen anything like it; I am exceedingly pleased with that." Well, I thought I had an order, but pretty soon he would say: "My dear sir, I would be glad to buy this machine, but I never had any calls for it." Of course, you have not; it is the first time I have shown it on this trip, and you are not going to buy or sell this machine, though you say it is the very best in the country, and have seen all the others on exhibition, simply because the people don't call for it? I thought I would speak of it to-day in order that I might show to you that the manufacturers sometimes have discouragements. Why, my dear gentlemen, if you find that somebody presents to you something that, in your judgment, is better than anything else that you have seen of that character, and you immediately go to work and assist the manufacturer in the production and selling of those goods, and your neighbor will sell them as soon as the people are educated and call for them, don't you see that you have a great advantage on your neighbor if you have something good? It seems to me that it is the business and duty of the manufacturer to produce good things and it is the privilege, I reckon, for the merchant to introduce and sell those good things. (Applause.) In those former days I met one of you gentlemen; I think probably you are here in this audience. It was that time when I produced these goods that I refer to, and I said to you, when I returned from my first trip I made in this country thirty-four years ago, that I believed there was a power behind the throne greater than the throne itself, and that we have got to get at that power. He said: "What do you mean?" I said: "We must advertise these things in the newspapers to the people and make the people demand that the retailers should sell these things and, therefore, demand and call for these goods from the wholesaler." (Applause.) And, gentlemen, he said next Summer that it was the best advertising thing done and the most useful. I refer to this case; it is one of those things we have to discourage us. But if we get together and talk about these things, understanding these things, and know where we are on all sides, it will be a great advantage to the manufacturer and merchant and will elevate our business in this country so greatly that we shall by and by be called the manufacturing country of the world, and shall be able not only to produce and sell goods in this country, but also sell them to all parts of the earth. I thank you, gentlemen. (Applause.)

Following Ex-Governor Goodell a very able address was made by William Bates, sales manager of the Kirk-Latty Mfg. Co. Mr. Bates is a young man, but showed a complete mastery of his subject. His address was as follows:

There may easily be several things in the economical distribution of Hardware and kindred lines which the manufacturer of to-day, in his haste to build up a large and rapidly increasing business, will overlook. The temptation to market his product through every available channel is one that is not easily withstood, and in a good many cases may not prove to be the most economical course to pursue.

The manufacturer who has built up a large business but is satisfied to have his product flow to the consumer through a few large channels, finds himself in an unenviable position if through any means one of these large outflow channels is cut off, for he has to build his bridges all over again at considerable cost. I would therefore say to the manufacturer who would distribute his product most economically, spare no pains in the choice of the path that will carry it most directly to the consumer, and see to it that this path is paved at the start so that it will stand the wear and tear of time.

"One cannot grow figs from thistles." Therefore, if the

"One cannot grow figs from thistles." Therefore, if the manufacturer would distribute his product economically he must determine what jobbers cater most directly to the consumer of the particular product he manufactures, and devote most of his time and energy to cultivating the trade, respect and confidence of those jobbers.

SUPERIOR QUALITY OF GOODS.

This can only be done by first manufacturing a line of product that is second to none, something that the manufacturer can stand behind always and will not be ashamed of at any time.

This is done by the employment of skilled labor, the paying of fair wages and the careful supervision of the product as it passes through its several operations in the mill.

Second, I would say to manufacturers, put up your product in nice, attractive packages, neatly papered or boxed and labeled. This is a very large factor in the economical distribution of a manufacturer's product, as the buyer will send repeat orders by mail for the goods that are put up so, and these mail orders, pro rated against the orders which cost him traveling expenses and other incidentals to secure, reduce the total expenses of distributing his product, and therefore, as I said, are a great factor in the most economical way that a manufacturer can distribute his product. Good judgment must be used in the employment of representatives; there is no economy in employing cheap salesmen.

COMPETENT SALESMEN.

A great many buyers never see the manufacturer himself, and he is only known to the buyer through the salesman and the quality of goods he manufactures. It is therefore necessary that the salesman be dignified and intelligent, and of strict integrity. Through possession of these virtues in a salesman orders are often secured to the manufacturer in preference to his competitors, who manufacture just as good a product, but whose representative does not, and never will, command the respect and confidence of the buyer. Cheap salesmen are very often, in fact, I might say always, weakkneed, and are susceptible of being worked by a shrewd buyer who understands his business and recognizes in the salesman this element of weakness. There is surely no economy in em-ploying the services of such a representative because they can be secured for a few hundred dollars a year less than the man who is thoroughly conversant with his particular line of business, and who can uphold the dignity of his position and command the respect, confidence and personal esteem of the buyer by his integrity and bearing. "By their deeds ye shall know them." Salesmen, command the respect of your customer if you would assist your employer in the economical distribution of his product.

The intelligent handling of correspondence materially assists in the economical distribution of a manufacturer's product.

The perfection the card index system has reached to-day enables a manufacturer to economically keep track of his customers and salesmen, and to solicit his customers' orders at the right time to secure them. This system also classifies his trade, and if applied rightly to his particular line of manufacture and faithfully followed up is also a very important factor in assisting the manufacturer to economically distribute his product. And so I might go on and tell you several more things that experience has taught me as an answer to this particular question, but time will not permit. There are other gentlemen present here who are anxious to tell you their views on this subject, and so for them I will solicit your earnest attention.

It seems to me that every manufacturer must recognize that the originating customer for his product is the consumer. He may be a blacksmith, a carpenter, a farmer, a man who is building a house, or an article may be made for which the demand originates in the kitchen, the dining room, the parlor, or any other part of the home, but no matter what the article may be the consumer originates the demand. The manufacturer then must consider how to place his product in the hands of the originating customer.

The maker can create a demand, but he cannot sell direct from his factory to the consumer, but must use some channel, and this brings us to consider the retail dealer, and we find

C. L. PACK, PRESIDENT CLEVELAND CHAMBER OF COMMERCE.

him well organized for the purpose. The retail dealer is part of a large class of honest, straightforward men. He must buy carefully and meet obligations in a satisfactory manner. He must deal honestly with his customers, and as a rule he knows every member of nearly every family in his territory. His desire is to sell the highest grade of article, and if he feels obliged to sell inferior goods he does so with an apology, and I have noticed that the dealer who sells the goods of highest merit is the one who owns his home and whose daughter has a piano and whose son a carriage, or the money is in the bank. A manufacturer has many problems to solve, and not the least is the placing of his wares into the hands of the consumer through the retail dealers of the country; and while he must consider the first cost of doing this he must also consider whether the method he selects is one that will tend to a permanent demand.

Can the manufacturer sell his product to the retail dealer direct from the maker's office? He certainly cannot—he must have a representation. There is no class of merchant in this country that stands higher in the business world than the Hardware jobber. His business is well organized, he has ample capital and fills the needs of the smaller dealers throughout the country. No class of business can be developed as the Hardware jobbing concerns have been without there being a legitimate demand for same.

There are four important factors to the jobbing concern: The buyer, the traveling man, the retail dealer and the manufacturer. It has been my privilege a good many times to take a chair at a Hardware buyer's desk, and I have long realized that his position is one of importance, and as a class, I wish to state here, they are uniformly courteous and obliging. Sharp and shrewd, of course, but they will always listen to a story that a manufacturer may have to tell. They are posted, too, and can distinguish as to the shades of value of goods offered them. The manufacturer may often be led into deals that he may afterward regret, but why blame the buyer? The keynote to the whole situation is here, and when the buyer and maker both realize that each has his part to do, an ideal affiliation is brought about and each will be a source of strength to the other and goods will be placed in the hands of the retailer, through the jobber, at lowest possible selling cost.

The traveling man should not be forgotten—that genial, wholesouled, well posted man of the road; up early in the morning and late at night—but, of course, always on account of business. How well he knows every man and boy in every establishment that he visits, and how he wins the heart of the dealer. He laughs at the cold of Winter and the heart or Summer, and will even smile when he doesn't get an order, which is not often, and he is the great factor between jobber and dealer and the manufacturer and dealer.

The Hardware maker is bound to fall into some errors, and if his business is not well organized, or if he makes inferior goods, or if he pursues unbusinesslike methods in his

S. D. LATTY, CHAIRMAN CLEVELAND MANUFACTURERS' COMMITTEE.

works, or in his office, or with his trade, verily he will be like the grass of the field.

Personally I am a firm believer that the manufacturer of small goods can distribute his product to better advantage through the jobber than by any other method, for the reason that his traveling man is in close touch with the dealer and the jobber's selling expense is reduced to a minimum because of the large variety of articles that he has to offer; besides his study is to sell goods to the immediate factor between the jobber and consumer.

General W. H. Withington, from his years of experience as President of the Withington & Cooley Mfg. Co., in selling goods to the Hardware trade, was able to give a very interesting history of the different ways in which goods have been distributed in this country.

Mr. President and Gentlemen of the National Hardware Jobbers' Association—I certainly esteem it a high honor to be asked to participate in any portion of the deliberations which come before your annual convention. When the gentleman who has just preceded me, Mr. Powell, spoke of your organization as one of the highest character, and of great ability, I felt like applauding that sentence, but, of course, you gentlemen are too modest to stamp the applause and I could not make it. But it cannot be otherwise. You yourselves must be conscious that it was a deserved—I won't say compliment—but a deserved statement of facts. I know of no branch of business in these United States which has accrued to itself greater ability, higher integrity, and a larger capa-

city for the handling of great affairs than those who compose Ten days ago or more, the trade the Hardware business. papers began writing me for an advance copy of my address. Now, when your amiable and handsome and resourceful Secretary went through the dictionary to find a word which would most completely express the sort of thing that you put up here, he set up the word "collocution," and he has liked it so well that he has kept it going ever since. I do not think that there should be very much of a formal address, but rather a discussion, a colloquial affair, and that is all that I have undertaken to bring out, and I think perhaps if he went a little farther and if you put us on the witness stand, and asked of us questions, it would help to bring out the best judgment and the best light on this matter of distribution, and it would promote its object still more. But it is certainly very kind of your association to give the manufacturers an opportunity of discussion of a question which touches them so gravely and it also concerns the jobbers, because after we have talked this matter up and down and in and out, and discussed it and discussed it, we shall find no escape from the conclusion that the most economical way for the manufacturer to distribute his products is through you, gentlemen.

This matter of distribution, gentlemen, is one involving vast interests and vast sums of money. I noted in a transcript from the advanced pages of *Poor's Manual*, recently published, a statement of the freight earnings of this country during the year nineteen hundred, and they reached the enormous sum of one billion, fifty-two million, eight hundred and thirty-five thousand, eight hundred and eleven dollars, that, I think, also included Canada. Think of it, for one year's earnings, for the transportation of freight alone—not the other earnings, I do not know any method of determining what proportion of these earnings applies to the distribution of the product. Of course a large portion applies to the gathering in of the material and also transportation of wheat and live stock, but there must be a great many hundreds of millions of dollars that have been paid during 1900 for the transportation of the products of the manufacturer to the other channels of distribution. Now, if you add to that sum the expenses and the earnings of the jobber and to that sum the expenses and the earnings of the retailer-if there are any means of doing it, I have none—you can form your computations as well as not. You can see that it would reach an enormous sum of money and that is no light question.

I noticed a question in *Iron Age* recently, from a correspondent who said that his cost of doing business was 14 per cent. As to what your costs and profits are as jobbers, you know better than I, but it presents a question so large, and represents an amount of money so large that I think it would be almost appalling if it were stated.

The methods of distribution—I must make my remarks as brief as possible. I trust the chairman, if it be a ten minute limit, will call me down when my time is up.

The limits of distribution—those which have been, those which are, and those which may be. And it is from a practical point alone that I am able to discuss this question. do not do it theoretically. I have been with it from my youth up. My business connection was with the North Wayne Scythe Co., having its office in Maine. Mr. Bigelow's early partner, Mr. MacInaw, and myself began life at the same time in that city. At the age of nineteen I visited, in the interests of this firm, New York, Philadelphia and Baltimore, to make an attempt to sell goods, though I was very green. I became associated with the predecessors of the present concern with which I am now connected. They were manufacturing hoes and forks and their methods of distribution at that time were to travel the country. Where now the business employ salesmen as such, they then employed six salesmen with a comparatively small product—traveling in 1857-62, not by rail, but in a horse and buggy, visiting the Hardware trade and taking orders in advance for these goods. That is all changed. What changed it? In my judgment, one of the most important factors in bringing about a change in the distribution—I won't say general, for I have not sufficient knowledge, but so far as the lines with which I am acquainted, the greatest factor in making the change which brought about the distribution of these goods to the jobber, was the Civil War. Under the extraordinary and abnormal conditions which then prevailed, there soon began to be a shortage of goods, a shortage of labor, and the men then engaged in jobbing Hardware were small in capital and the percentage of business at that same time by men-able menmen with foresight, was shown by those who grasped the situation, and this happened year after year. During the later years of the war, the products of the factories were contracted,

absorbed and controlled by the jobber before the retailer could think of placing an order for it. That cut a very important figure so far as the business interests with which I am connected are concerned, for transferring this business from the retailer direct to the hands of the jobber. It was going through a process of reduction. In those days any man who was smart and keen enough to buy a stock of goods, even if the retailer, could sell them to his neighbor in three or four weeks on the advance of prices, and as a consequence there were built up in small towns a great number of jobbers. has been going through a process with which you are all familiar—a process of reduction. "To him who hath more miliar—a process of reduction. "To him who hath more shall be given, and to him who hath little, even that little shall be taken away." Methods of distribution as they now shall be taken away." Methods of distribution as they now exist: On that point I shall dwell but very briefly. I can tell you nothing new. It is to-day the apotheosis of the jobber. He has been growing constantly in importance and in the absorption of the product of the manufacturers. The participations which have been going on, and which have been referred to, and the consolidations and concentrations have largely played into his hands. The consolidations, the associations, fixing the prices, and naturally desiring to placate the jobber and secure good will, have offered to him margins, and the relations between the manufacturer and the jobber have been growing closer through just such functions as these, and from the committees of associations, among them. the committees of our associations, arranging plans for the distribution of goods.

The question, however, as it is presented, is rather one of futurity than of the present. It is not simply how it is done, but how can it be done? And yet, we are brought somewhat face to face with the question as to whether the present conditions will continue, and why not? What is to make against them? The Secretary in his paper alluded to one of the things that make against them to some extent, and that is the department stores and catalogue houses. I do not bring that question here, it has already been brought up and it has been somewhat of a burning question with the retailers particularly. If we look at the question which I touched on at the outset as to the large cost of distribution, we must recognize that there is a very heavy percentage added to the prime cost to the manufacturer's cost for product in order to land goods in the hands of the consumer and these conditions continue. So far as they are normal and economical, I should say yes, but if the cost of the consumer and over cost of production is abnormally large, the loss of trade will work to its reduction, and under conditions of competition this reduction would work out with a change of margins, but without change of methods. There are, of course, a good many conditions which are abnormal and there are a great many possibilities which occur. These large consolidations of manufacturers' interests leave the imagination or the forecast almost at sea as to the extent to which they may alternately go. If, as up to the present time, they control and absorb the profits, not only of manufacture, but of the mind and of the transportation company, it is easily conceivable that they may go still further and seek to aggregate to themselves not only the profits originating in the prime costs of material, but they may go still further and seek to aggregate themselves the cost of the products in marketing the goods. I suggest that only as a possibility. I do not regard it as a very strong one. If you look to the ideas of putting things more and more in governmental hands which exist in other countries-you see the existence of the post-office department which, to some extent, manufactures its own products and sells the postal card to a ragged urchin for as cheap a price as it would sell ten thousand or more to you and me-you will find that it is certain among the possibilities; put the two things together, the catalogue house and department store, the parcel-post organization, which is limited in this country, but which does exist in foreign countries, and add to that the free rural delivery by which the farmer can sit in his house and make an order for goods and have them delivered him-there are certain possibilities of a distribution which will come directly from the manufacturer to the consumer. The rapid use of electric lines would aid that. I admit to you, gentlemen, that is very remote and not probably within my day, although things move very fast. But it is among the possible contingencies to be taken into account and possibly you may have some occasion to take some action or use some influence in the matter of legislation in the direction of parcel post. I can only say that actions speak louder than words, and that the method which the business interests with which I have been associated, is the method now in existence through the well established channels from the manufacturer to the jobber and from the jobber to the retailer.

The vice-president of the Garry Iron and Steel Co., G. E. Needham, made a very interesting speech on the means of distributing steel roofing, conductor pipe, etc. He spoke as

The subject you have assigned to me for discussion is "How Can Manufacturers of Hardware and Kindred Lines Most Economically Distribute Their Products?"

In considering this question and giving my views, it seems to me that some light may be obtained by relating my experiences along these lines for over 30 years, and they may be of some interest, if not amusement, to the members of this convention.

It is said that "Experience is a good schoolmaster." think in my case this saying has been verified. My experience was not along the lines of Hardware, but kindred lines—viz.: Iron and Steel Roofing, Sidings, Ceilings, Conductor Pipe, Eaves Trough, &c. Our company, the Garry Iron and Steel Roofing Co., were among the first to commence this business, and may be considered the pioneer manufacturers of the above named material, therefore it became my business to market our products. The question came to my mind, "What will be the best and most economical way to dispose of them?" Metal Sheets were well known, but not for roofing purposes; it therefore became necessary to educate the public to their practical use for purposes designed, and who should be the schoolmaster? Knowing the ability of jobbers for this work, I sought to make arrangements with them for this purpose. They kindly and gently informed me that a demand for them must first be created before they would or could do anything with them. These were the old school jobbers, doing business on the slow motive power, hence the demand had to be created, which was done through other sources; the consumer, the tinner and the retailer. The demand did come and came in enormous proportions, as evidenced by the thousands of tons of sheet metal that are used for these products yearly at the present time. The demands have been made, conditions for handling manufactured product are changed, thusiness is being done on the high pressure and rapid transit principle. Now the question arises, "What is the cheapest, quickest and most practical way of marketing our goods?" The demand has been created—now the demand is, "What is the best and most feasible way of taking care of this demand?"

LOOKING THE FIELD OVER

I am satisfied that this problem can be solved through the agency of the jobber. When we take into consideration their ways and means and their willingness, providing we give them the money end of the business, to handle our products, we, as manufacturers, are forced to admit that the proper solution of the question is in favor of the jobber.

With their great army of traveling salesmen, composed of men of brains, business ability, tact and energy, going into every city, town and hamlet, daily and almost hourly, the jobber has pre-eminently the advantage over any other system that at this time presents itself to my mind for selling

and distributing goods.

I think I am within the bounds of truth when I say that your association is the largest and most influential, representing the largest amount of capital of any commercial or-ganization in the country. I am in favor of association of this character, for it enlarges men's views by interchange of thoughts and ideas, destroys petty jealousies and lifts men on a higher plane of business principles, establishing harmony among the members and securing the confidence of your customers and the good will of the public.

In conclusion, I wish to say that a closer and more harmonious business relationship should exist between the manufacturer and the jobber. Their relations should be placed on the base of live and let live, in perfect harmony and justice, on the universal brotherhood of man, and founded on the eternal principle of "Doing unto others as you would have others do unto you."

He was followed by C. S. Van Wagoner, President of the Van Wagoner Co., Cleveland.

Economy is one of the leading factors in the success of We believe that a liberal economy, so to any business. speak, saves the most money and gets the best results. A manufacturing concern that is honest all the way through. honest in its goods and in its dealings, and which also has good will that is hearty and genuine, has an advantage and a power in its favor that will in time establish strong and mutually valuable relations with jobbers of like character, and keep a flow of its goods through them to the consumer at a minimum outlay.

Fewer salesmen and less traveling expense, ruinous concessions to buy unstable trade and various other items of cost are saved if a manufacturer has secured a trade that is easily handled. Instead of rushing around the country to get the whole earth, if he will select as many substantial and favorably located jobbing houses as is reasonable without inviting attacks on his trade from his rivals, and will cultivate favorable relations with them, he will get his proportion what the market takes at the highest average price and with the greatest economy.

We therefore repeat that the most economical way for a manufacturer to market his product is to cultivate close relations with the jobbers best suited to place his goods, and if he has to buy his trade let him do it with fair dealing, good will and concessions that will not break his own mar-

Geo. V. Willson, Secretary-Treasurer of Hussey, Binns & Co., Pittsburgh, closed the collocution with the following well-chosen remarks:

I hesitate to speak to you upon a subject of such importance, the real answer to which determines whether the middleman is essential as the distributer between the manufac-turer and consumer. I cannot expect to present new ideas and only hope to emphasize some which have already been considered in the past.

It would seem to me that under ideal conditions there can be but one answer to the question, and that the manufacturer of Hardware and kindred lines can most economically dis-

tribute his product by the aid of the jobber.

I say ideal conditions, meaning that almost millenium-like time, when the manufacturer is satisfied to market his goods through the hands of the dealer, and maintains a proper distinction in price between the jobber, retailer and consumer; when the jobber is so in fact, and not alone in name, and does not take advantage of the prices obtained as a jobber to destroy the market of his customer, the retailer, whom he ought to protect; when he lives up to the spirit of your organization, "the promotion of more friendly business relations and mutual confidence and good will with each other and with manufacturers," and when the retailer is content to act as the final distributer of the goods and is willing to recognize that the jobber is entitled to a lower price than himself.

THE COST OF DISTRIBUTION IS NOT THE ONLY QUESTION

affecting the relations between the jobber and the manufac-The time was, not so many years since, when the private brands of dealers were practically unknown and the manufacturer had a just pride in the reputation of his goods and an inducement to maintain the quality of his various brands. In these degenerate days, however, every dealer, large or small, must have his private brands and labels, and, instead of being the agent for the distribution of the goods, poses both as manufacturer and distributer. The real manufacturer, therefore, in order to retain his identity, is compelled to seek the retailers or large consumers, who prefer high grade goods of the manufacturer's own brands, hence mere cost of distribution becomes a secondary consideration with him.

The manufacturers and jobbers are necessarily dependent upon each other, and, realizing that fact, should treat each other in the spirit of mutual kindness and good will.

I have, as a member of an association of manufacturers, with which you are familiar, had the privilege of coming in contact with various committees representing your organization quite often during the past five years, and while we have not always been able to agree upon certain lines of policy, and have had occasion to change our views upon important points during that time, still I wish to express my appreciation of the almost universal spirit of fairness which has prevailed.

THE JOBBERS' PROFIT.

The manufacturers desire to aid the jobbers in every reasonable way, for it would only be good business policy to do so. We try to protect you to that reasonable margin of profit to which you are entitled, and encourage you in every way to obtain it, for at no time is our business so satisfactory as when our friends are obtaining proper compensation for distributing our goods.

There is one point which I would like to impress upon you right here, and which so many seem to overlook-namely, that the proper place for the jobber to look for his profit is from his customer, and not from the manufacturer. It is hard enough for the latter to make his own profit, to say nothing of also making a profit for you.

I have strayed somewhat from the subject, but in doing so

have endeavored to indicate some of the reasons why the manufacturer feels compelled at times to also act as the distributer of his own goods, even although it is not the most economical way.

Let us try to get closer together, realizing that although "shrewd business," as it is improperly called, may seem to prosper at times, still it is better to give the old-fashioned definition to honesty instead of the "business" definition which sometimes prevails.

Following the collocution was the executive session of metal dealers, which took place after the morning session of the convention, the members of the concerns dealing in tin plate and metals meeting for a brief conference.

WEDNESDAY AFTERNOON SESSION,

which convened at 2:30, was entirely executive, and consisted principally of the reports of the following committees:

Report of Executive Committee.

Report of Membership Committee.

Report of Grievance Committee.
Report of Fraternal Relations Committee.

Report of Press Committee.

Report of Transportation Committee.

Report of Entertainment Committee. Report of Metal Committee.

Report of Heavy Hardware Committee.

This was succeeded by a discussion upon

THE TRUE METHOD OF COMPUTING COST.

LADIES RECEPTION AT COLONIAL CLUB.

Wednesday afternoon at 4 o'clock the visiting ladies escorted by a committee of twenty-five Cleveland ladies were taken in carriages to the Colonial Club, where they were tendered a reception and supper.

WEDNESDAY EVENING SMOKER.

At 8:30 the delegates and guests assembled in the spacious "Palm Room," on the second floor, and entered into the enjoyment of the annual smoker.

The committee in charge of the arrangements for the smoker were as follows: Wm. Bates, chairman; F. W. Davis, Geo. M. North, J. C. Brainerd, J. Williams, Geo. H. Lloyd, C. C. Paine, H. W. Caldwell.

The large room was soon crowded to its utmost capacity with as jolly a lot of fellows as one could wish to meet.

An excellent programme was rendered, many of the songs being sung by the entire gathering. Great enthusiasm prevailed during the playing of "Dixie" by the orchestra, and when they rendered the "Star Spangled Banner," all present rose to their feet and the air seemed filled with waving hand-

kerchiefs while the cheers made the windows rattle.

It was suggested that "God Save the Queen" be sung, and everyone went at it with a vim. A number of flags of Great Britain had been passed around the room and during the singing of our neighbors' national anthem they were kept waving vigorously. The cheers for the Canadian guests which followed was but another evidence of the good feeling existing between this country and our friends on any northern existing between this country and our friends on our northern boundary.

While the programme was being rendered those present enjoyed fragrant Havanas, cigarettes or the beautiful souvenir pipes, given by the committee. Liquid refreshments were also very much in evidence as were also more substantial articles of food.

THURSDAY MORNING SESSION.

The delegates assembled in the convention hall at 10 a.m. and again took up the executive business. The following programme was carried out.

Miscellaneous Business.

Discussion of Questions to be Drawn from the Question

Miscellaneous Business.

Consideration of Committee Reports.

THURSDAY AFTERNOON.

Thursday afternoon the delegates and guests, together with their ladies and the local committees were taken in carriages for a drive around the city.

The trip included beautiful Euclid Avenue, Wade Park and Gordon Park, where for some distance the driveway follows the bank of Lake Erie, the Boulevard, Crawford Road and back down Euclid Avenue to the hotel.

THURSDAY EVENING.

For Thursday evening's performance at the Empire Theater, the Lake Erie Iron Co. purchased the entire box seating capacity for the wives and daughters of the delegates and visitors, and the local ladies reception committee. The arrangements were in charge of Frank W. Davis, of the above firm, which in itself was a guarantee for a good time.

THURSDAY EVENING SESSION.

The convention was called to order shortly after 8 p. m. by President Shapleigh. The subject of the "Outlook for the approaching year: Will present range of prices probably prevail?" was ably discussed by Frank Dickerson, general sales agent of the American Tip Plate Co., and J. C. Brainerd, sales manager, The Johnson-Jennings Co.

Mr. Dickerson's speech was frequently interrupted by applause and laughter. He was followed by Mr. Brainerd, who in his usual convincing manner, spoke as follows:

Mr. President and Gentlemen:

In olden times when a nation or body of men desired to know the prospects of the future, they consulted soothsayers and astrologers who derived their power from their supposed ability to read the stars and their associations with the devil. The business man of to-day must go it alone, and when in search of like knowledge must derive it from his judgment of the condition of crops, raw material, factory capacity and domestic and foreign demand. The farmer is well known to be a large consumer of all lines of manufactured products, and the abundance of his crops and his ability to market them at a good price goes a long way toward the assurance of a prosperous year.

The agricultural reports for this year are favorable for a good wheat crop and an average corn crop in this country and for a shortage in South American and Russian cereals. This for a shortage in South American and Russian cereals. should assure the maintenance of the present prices for American food products. The reports on the cotton crop are not so favorable, and should the shortage be as heavy as some authorities claim, prices on cotton will probably be materially advanced. The past two years have been exceptionally good among our farming community and

THE FARMER IS TO-DAY A MAN OF MEANS

and is buying new tools and machinery and remodeling old, or building new buildings. The agricultural implement makers began manufacturing for the coming season fully four to six weeks in advance of the usual time and they are

making goods that are already sold.

The malleable iron trade and industry that is closely allied to the agricultural implement business and is an industry that in iron circles is considered a very good barometer of the trade, report unusual activity and large contract orders. They are pushing the furnaces for pig iron and are not getting their raw material as promptly as they desired. This shows a shortage in certain irons; in fact, as we all know, the mills, especially those that produce material used by the Hardware trade, such as pipe, wire, sheets, etc., are far behind on orders to-day. It will be months before they will be caught up so that deliveries will reach their normal conditions.

THE RECENT STRIKE

of the amalgamated association curtailed the output of tin plate, sheets, hoops, pipe, bars, etc., at least 250,000 tons and caused a very marked shortage in this line. In the case markedly of sheets and tin plates, this shortage allowed the few factories that had any stock on hand to obtain a large premium for immediate deliveries. This abnormal condition cannot exist much longer, and prices in this line must return to their normal level.

Good authorities claim that had the strike not occurred and thus curtailed consumption, certain grades of pig iron would, owing to the scarcity, certainly have advanced in price. Within the last ten days foundry pig has advanced fifty cents per ton, and I am informed on good authority that an additional advance of from fifty cents to one dollar may be expected. Two of the large furnaces in this section that make a specialty of Scotch irons are practically sold-up for the next six months, and the balance have no surplus in this grade. The stock of pig iron has been largely reduced of late, and all grades are very active.

Nearly every day large companies are being formed and contracts are being let for the construction of electric railroads. It is an accepted fact that

THE ELECTRIC RAILROAD IS THE COMING ROAD

for short distance travel, and in a short time the more thickly populated States will be covered by a net work of these lines.

connecting every city and town of any importance. These roads are a vast factor in the trade to-day and will continue to be for some years to come. They consume both in their construction and maintenance large quantities of iron and steel, both for rail, bridge and track supplies and in those lines of manufactured articles so well known to the Hardware trade.

The transition from the old style wood and iron freight car to the modern pressed steel car is going steadily forward and with increasing rapidity. One company in this line of business is alone consuming 1,600 tons of steel daily, or a yearly consumption of over a half million tons. The new steel car is one of much larger capacity than the old wooden car, and the use of these large cars has necessitated the use of heavier rails and the construction of stronger bridges.

LARGER AND MORE POWERFUL LOCOMOTIVES ARE IN ORDER, and the strictly up-to-date railroad will have engines capable of hauling as large a number of the new type cars as they

formerly hauled of the old type cars.

Steel rails are being contracted for to-day for 1902 delivery at an advance of \$2.00 per ton over present year prices, and mills report the outlook very favorable for all lines of rail-

road material.

The ship building industry throughout the country is very busy; that of the Great Lakes being taxed practically to its full capacity for the entire Winter and Spring seasons. The ore industry has been very heavy this year; in fact, larger than ever before, and it is conservatively estimated that twenty-six million tons will be brought down from the upper lake region before navigation closes, and that the amount of ore at the mines and docks will be less than for several seasons past. This, in view of the fact that it has been a year where ore users have bought for immediate use only and not on a speculative basis would tend to show the exceptionally good outlook for next year. The ore men are taking a conservative but firm view of the 1902 market, and while it is impossible for any outsider to say just what prices they will determine on for the coming year the compass points to at least as good, if not better prices than this year's.

Hardware stocks throughout the country are badly broken in many lines and must be filled up before the Spring season begins, as ability to fill orders is to-day one of the important adjuncts to success, and no line of trade more thoroughly ap-

preciates this than our Hardware friends.

concentration of industries is the order of the day, and it seems to me that this is much more of a benefit than a curse to the country at large, where the power to fix and maintain prices on a large percentage of the industries of the country is centered in the hands of a few gigantic corporations, as it now is, and those corporations continue to show the fair and conservative spirit they have maintained so far both toward the buyer and the laborer. It acts as a most reliable governor on the entire business of the country and assures a much longer season of prosperity than the old regime, where the timid manufacturer thought to fill his factory with work at just a little under the prevailing market, and by so doing carried the market down with him.

The foreign trade has fallen off quite largely, especially in the iron line. Germany, Austria and France are in the throes of one of the periodical trade depressions that sweep over a country from no seemingly explainable cause. England, who is our best market to-day, has reduced prices on her home products to meet the American competition, and Russia's retaliatory tariffs have, for the time, blocked our trade

there.

THE NEW AMERICAN POSSESSIONS

will no doubt use more of our goods next year than ever before, but this will in a very small measure make up for the large European deficit. The Oriental trade, especially that of China is bound in the near future, now that the wall has been torn down, to be a great benefit to this country, but this cannot be counted on to but a limited extent for the coming year.

We were stunned when the news of the death of our great citizen and President, Wm. McKinley, was flashed over the wires, and business stopped for the moment. Under his administration we knew a universal prosperity greater than any before in the history of the country. Under his administration our relations with foreign nations were the best and our domestic affairs in flourishing condition. The assurance given us by our present President, Theodore Roosevelt, that it is his firm intention to continue the wise and just policy mapped out by his great predecessor sets all our fears at rest, and we can move forward with confidence.

Taking the foregoing as a basis we may, I believe, safely conclude that the prices for the first six months of the coming

year will be fully up to those now ruling. This year we have not experienced the usual midsummer depression; this may be expected next year, and will not be considered unusual. The prices for the last six months of 1902 are problematic, but I am of the belief that while there may be, and probably will be an averaging up, they will continue throughout the entire year to be well maintained.

I have great confidence in the Yankee nation and its ability to maintain the position it now holds—that of the leading

commercial power of the world.

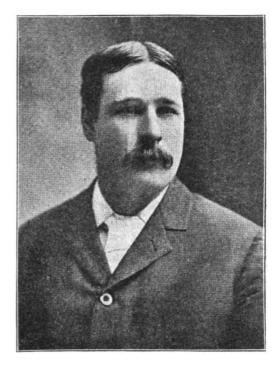

Mr. Henry R. Towne was also to speak on this subject, but he was unavoidably absent.

President Shapleigh announced that Mr. Fayette R. Plumb, President of the newly born American Hardware Manufacturers' Association, was present and would address the meeting.

Mr. Plumb said:

Mr. President and Members of the National Hardware Association—I come before you to-night as the representative of the American Hardware Manufacturers' Association, to extend greetings of that organization formed to-day and which will be perfected in the near future.

It is our desire to include in its membership all manufacturers who seek you as distributers with the distinct under-

W. STARKE, PRESIDENT CANADIAN WHOLESALE HARDWARE ASSOCIATION.

standing that manufacturers only are eligible as we wish to eliminate any misunderstanding with your association.

We are not in line as you know for membership in your company, and we think it only fair that we exclude all who claim membership here.

The manufacturers of Hardware have been very slow in these progressive days to assume that there was any necessity for concerted action, but recent developments in iron and steel have shown them that if they are anxious to correct errors in their own business the time has now arrived for concentration.

We recognize, of course, our relation with the wholesale Hardware jobbers and know that we must look to them to distribute our wares and, therefore, how necessary it is for us to work in harmony with them. Our efforts then will naturally be conducted along such lines as will meet with the approval of those whose interests are mutual.

We think you will agree with us when we say that unless there is perfect harmony between the two associations that neither of them can exist. We shall, therefore, look for cooperation and assistance in correcting any evils which may be presented.

During the last six years most of us have thought it necessary to attend your annual meetings, and while you were in executive session, which was the greater portion of the time, we have been compelled to seek amusement as best we could awaiting the termination of each session. It has, therefore, occurred to us that we could not select a better time than the dates of your meetings for our annual convention. We

shall thus be in a position to entertain any suggestions you may have to make for the general betterment of our mutual

I feel confident we shall have your cordial support and, therefore, predict a long life for the American Hardware Manufacturers' Association.

Then followed the collocution, "Trade Papers: Their relation to jobbing interests," which was discussed by R. R. Williams, editor of the Iron Age, Daniel Stern, President American Artisan, and A. Eugene Bollis, manager of Hardware.

Secretary-Treasurer Fernley read an invitation from the Berger Mfg. Co., of Canton, O., to the delegates and guests to visit their new tin plate plant. They tendered a special train to convey those who wished to accept the invitation to Canton and return to Cleveland on Saturday, Oct. 12.

FRIDAY EVENING.

The banquet tendered the convention by the manufacturers of Cleveland took place at the Cleveland Chamber of Com-

FRIDAY MORNING.

The Friday morning session was devoted to executive business and the election of officers. The officers selected for the ensuing year are as follows: President, R. A. Kirk, St. Paul; first vice-president, John C. Koch, Milwaukee, Wis.; second rist vice-president, John C. Koch, Milwaukee, Wis.; second vice-president, Brace Hayden, San Francisco; secretary-treasurer, T. James Fernley, Philadelphia; executive committee, Samuel A. Bigelow, Bigelow & Dowse Co., Boston; M. Dudley, Gray & Dudley Hardware Co., Nashville; W. S. Wright, Rector & Wilhelmy, Omaha; W. R. Belknap, W. B. Belknap & Co., Louisville; P. E. Strauss, Fitz, Dana & Co., Boston; J. D. Moore, Moore & Handley Hardware Co., Birmingham. For the place of meeting for next convention, New Orleans was selected, convention to take place on the New Orleans was selected, convention to take place on the third Wednesday in November. The usual vote of thanks was passed, and the convention was declared adjourned.

Among the many handsome souvenirs distributed during the convention by the visiting manufacturers, the following are worthy of note:

E. C. Atkins & Co., Indianapolis, Ind., silver charm pencil

sharpener, a handsome and very useful gift.

Lake Erie Iron Co., Cleveland, O., a 9 x 14 photo of our late President, Wm. McKinley. This photograph was taken in Cleveland last June.

Fayette R. Plumb, Incorporated, Philadelphia, handsome

nickel-plated paper weight, one of Plumb's hammers.

Lovell Mfg. Co., Erie, Pa., a gold-plated anchor, represent-

ing their "Anchor Brand" wringers.

Cleveland Twist Drill Co., Cleveland, O., very neat pin, gold-plated, having thereon their trade mark.

Standard Tool Co., Cleveland, O., vulcanized rubber pen

holder, representing a drill with their advertisement printed thereon in gilt letters.

American Wringer Co., toy wringer.
Standard Tool Co., gold-plated charm, made of a drill.

Reading Hardware Co., handsome clock.

Peters Cartridge Co., Cincinnati, O., a handsome paper weight, made three 30-30 cal. rifle cartridges, and a No. 12 shot cartridge, very tastily arranged.

Tower Mfg. Co., Cincinnati, O., a glass barrel, filled with

tacks and staples, to be used as a paper weight.

Champion Steel Range Co., Cleveland, O., enameled ash tray, with their advertisement printed thereon.

Lufkin Rule Co., Saginaw, Mich., pocket tape measure.

THE BANQUET.

The large banquetting hall of the Chamber of Commerce presented a beautiful appearance Friday evening, when nearly 500 delegates and guests assembled there. A profusion of flowers, fine music, a number of beautiful women, an excellent menu and noted speakers made it one of the most successful of the association's annual banquets. At the speakers' table on a raised platform sat Richard W. Shapleigh, Brace Hay-At the speakers' table den, T. Jas. Fernley, H. H. Bishop, John Bindley, Wm. Starke, Judge Francis J. Wing, Hon. M. A. Hanna, Virgil P. Kline, Esq., Rev. Dr. Geo. H. McGrew, Chas. L. Pack, S. D. Latty, E. S. Page, R. A. Kirk and John C. Koch.

A feature of the menu was the glace fantaisie made in the form of an anvil. For nearly two hours those present were engaged in partaking of the refreshments after which they

listened to addresses by the following gentlemen:
Hon. Francis J. Wing, who officiated as Toastmaster Richard W. Shapleigh, Hon. Marcus A. Hanna, Virgil P. Toastmaster Wing created much merriment by his witty manner of introducing the speakers.

When Senator Hanna stepped forward to deliver his address, the banquetters rose from their seats and the arched ceiling of the hall rang with their cheering. This was re-peated several times during the address, and when the Senator finished, the cheering was continued for several minutes. During his address the Senator said he believed in trade organizations and that a combination of mutual interests produces greatest results. The foreign policy of other nations depends on force of arms, not so in America, our development being the highest state of civilization. Young men have better chances now than ever before. American growth of in-terests have reached the point where we must look where to find a market, and this question should receive consideration in all trade organizations. It is one of two things with us, more markets or less production. Some people sneer at commercialism. This for America is a paramount consideration. We have the finest mechanics and the best business men, and we want a chance to place our products in the markets of the world. To accomplish this we must have the American ship. (Great applause.) The American people are in favor of the Ismithian canal to be open to all the world.

At the close of Senator Hanna's address a verse of America was sang with great enthusiasm.

Virgil P. Kline delivered an address on the subject, "Commercial Honesty." Toastmaster Wing then spoke as follows:

On behalf of the Hardware manufacturers of Cleveland I wish to bid you a hearty welcome. I am aware that the term middleman has come to be used, at times, in an opprobrious sense. I cannot concede that any opprobrium could possibly

attach, unless the middleman is entirely without usefulness. In the trade with which you are connected I can readily understand that there is a large field for usefulness. Were it not for the jobber, the manufacturer would require an additional capital to carry the stock which the jobber now carries, and for this reason, the middleman is a kind of a partner of the manufacturer.

I think it will be recognized as true that to the jobber of Hardware is largely due the fact that American manufacturers are to-day producing articles of greater merit and higher excellence in the Hardware line than the manufacturers of any other country in the world. Broadminded competition cannot help but be more beneficial to trade than narrow rivalry. Reliance for success in manufacture and trade upon secrecy and isolation can never produce the beneficial results which flow from a generous interchange of knowledge and experience between those engaged in similar enterprises. The standardizing of manufactured products in metal in this country is incident to the broader view taken by you gentlemen, and has grown out of just such meetings and associations as this. There are other reasons, we of course know, for the phenomenal progress which has been made in recent years in the exportation of the products with which you gentlemen have to do. You have been permitted to develop your skill and experience by wise protective laws. I feel at liberty to say this upon this occasion, because success condones fancied errors of methods, and no matter what the political beliefs of a person may have been, so long as he is an American, and gratified with American trade supremacy, he is in no sort offended by a suggestion that a protective tariff was, to some extent, the occasion of it. America, and all things American, have been enormously advertised by the astounding results achieved in the Spanish war. In conclusion, I wish to again congratulate you, the manufacturers and middlemen, upon the present opportunities in trade, and the manner in which, in your wisdom, you are taking ad-A vigorous foreign policy and an intimavantage of them. tion to the world that we not only can, but will protect our citizens, wherever they may be, tends to create and support the individual courage required as the basis of all foreign enterprises.

H. B. Ives Co.

The new plant of the H. B. Ives Co., in New Haven, Conn., has been constructed on the most improved plan for economy in operation, and productiveness in output, the latest up-todate machinery having been added to the facilities previously enjoyed by the company. It is conceded by manufacturers who have inspected it to be the most thoroughly equipped plant of its size in New England. The company have added to their line of sash locks-now admitted to be the best known window appliances specified by architects-a new wrought metal one, shown in their page advertisement in this issue, which is meeting with increasing sales throughout the trade. As will also be noticed in their announcement referred to above, they have successfully brought out a Window-stop Adjuster, which has been fully protected by patents in the United States and foreign countries. The essential feature of this adjuster is that it is practically a flush washer, and being made from one solid piece of metal in a pattern that has a thick bed, it will not bend in tightening the screw, and having a thin flange, to admit of an extremely close adjustment of screens, and which also prevents the screw from drawing it into the wood. It is extremely neat and ornamental in appearance, affording a quick and simple adjustment of the shrinkage or expansion of the windows to which it is applied, and doing away entirely with all weather-strips and other anti-rattler devices. The company issue a catalogue, illustrating their entire line of window Hardware specialties, which will be mailed free upon application, and should be in the hands of every Hardware dealer in the country.

Puller—But what ought I talk to my partner about?

Putter-Her splendid play, of course.

Puller-And if she is a regular duffer?

Putter—Tell her what lobsters the others are.—Ex.

AMERICAN HARDWARE MFRS. ASSOCIATION.

}

PRELIMINARY MEETING OF HARDWARE MANUFACTURERS.

Over ninety Hardware manufacturers met in the Banquet Hall of the Hotel Hollenden, Wednesday afternoon at 3 p. m., for the purpose of forming a Manufacturers' Association. Among those present at this meeting were the following:

Oliver Williams, president of Bryden Horse Shoe Co., Cata-

sauqua, Pa.
C. F. Carrier, the Cronk & Carrier Mfg. Co., Elmira, N. Y.
George D. Kirkham, American Steel & Wire Co., Cleveland. George D. Kirkham, American Steel & Wire Co., Cleveland.
John C. Schmidt, Standard Chain Co., Pittsburgh.
S. S. Gould, St. Louis Shovel Co., St. Louis, Mo.
J. E. Pumphrey, Standard Chain Co., Pittsburgh, Pa.
Frederick D. Mitchell, Standard Chain Co., Pittsburgh, Pa.
George S. Kellogg, Pressed Steel Rake Co., Buffalo, N. Y.
C. H. Miller, Champion Steel Range Co., Cleveland, O.
E. G. Smythe, Wiebusch & Hilger, New York.
Daniel Simonds, Simonds Mfg. Co., Fitchburg, Mass.
J. W. Brainard, American Steel Hoop Co., Cleveland.
William Brunow, Geuder & Paeschke Mfg. Co., Chicago. William Brunow, Geuder & Paeschke Mfg. Co., Chicago. C. W. Scofield, Lake Erie Iron Co., Cleveland. T. A. Musgrove, Geuder & Paeschke Mfg. Co., Milwaukee. J. L. Evans, the Brown, Hinman & Huntington Co., Columbus,

T. A. Musgrove, Geuder & Paeschke Mfg. Co., Milwaukee.

Thomas Ellis, Iver Johnson's Arms & Cycle Works, New York.

Frank M. Tobin, the Hopkins & Allen Arms Co., Norwich, Conn. Frank M. Tobin, the Hopkins & Allen Arms Co., Norwich, Conn. Joseph B. Weed, Atha Tool Co., Newark, N. J. H. W. Caldwell, the Cleveland Stone Co., Cleveland, O. Wm. R. Howell, Fayette R. Plumb Co., Philadelphia. E. Warren Smith, the Pike Mfg. Co., Pike Station, N. H. Williston B. Penfield, the Hamilton Rifle Co., Plymouth, Mich. S. Y. Buckman, the Berger Mfg. Co., St. Louis, Mo. Albert E. Hanna, Dominion Wire Mfg. Co., Montreal. Herbert T. Williams, the Iron Age, New York. R. R. Williams, the Iron Age, New York. Daniel Stern. American Artisan. Chicago. Daniel Stern, American Artisan, Chicago Sidney P. Johnson, American Artisan, Chicago.

Before the meeting was called to order Samuel D. Latty, Chairman of the Cleveland Manufacturers' Committee, requested those desiring to attend the banquet Friday or the drive Thursday to answer the postals enclosed with their tickets.

H. B. Lupton called the meeting to order and Robert Garland was elected temporary President and F. G. Mitchell temporary Secretary.

Mr. Garland opened the meeting with the following ad-

We have met here, gentlemen, in accordance with the call to consider the advisability of forming an association of Hardware Manufacturers.

Most of us here have been attending the conventions of the National and the Southern Hardware Associations, meeting the jobbers in pleasant relationship, and discussing with them at their open meetings such trade questions as would come The jobbers are organized, however; we are not.

Unquestionably much can be accomplished by organizing. If there are any matters of variance as between the manufacturer and his good friend, the jobber, we can discuss such questions at our separate sessions, and with both bodies organized we should be able to reach better results.

here as individuals, we accomplish little or nothing.

The Hardware Jobbers' Association must be successful or they would not live from year to year, constantly growing stronger. The Association of Agricultural Implement Manufacturers is a successful organization to which attention might be called. This association is in a very flourishing condition, and the members of it have been well repaid for their efforts.

It would be the idea, as I take it, for our association to meet, say, twice a year; once during the convention of the National Jobbers' Association, and again at the Southern Jobbers' convention.

Matters of important interest are being constantly brought to our attention by the jobbers; often through the executive committees of their association. Certainly, therefore, with our own organization we could reach better understandings, work out better results than by working along in a vague way as heretofore. All around us we see trade organizations. Jobbers and retailers, working for the betterment of their business; but we manufactures go along as we best know how. All kinds of different contracts are made covering such important matters as quantities, term of contract, privilege of increase, guarantee of price, etc. Some of us have, of course, remedied such abuses very materially, but there is still room for general improvement. Some men, for instance, new in business, will be glad to make any kind of a contract, give anything in the way of a guarantee, or a long term contract for an indefinite quantity, simply for the glory of selling one of our large jobbers. He is simply buying experience, and he can figure what it cost him when at the close of his business year he examines his balance sheet. Manufacturers of this kind are a menace to the manufacturing business; they are a menace to the jobbing trade as a whole, and just as the jobber, perhaps new in the business, or with wrong ideas or little experience, has been benefited by being taken into the counsels of his organization, so can we attain more uniformity in our dealings with the trade by a general discussion of leading trade questions.

We are all, of course, aware that action taken by our association (should we perfect one) would not bind all our members, but certain measures could be recommended, and various abuses could be eradicated, which would certainly be taken up.

by a sufficient number of manufacturers to be of lasting benefit to the trade at large.

It is unnecessary, however, to further expatiate on these matters, and while it just occurs to me that our object here is to form a "Union," yet we can say to our jobbing friends that this is not intended to be one of the tyrannical unions to which Mr. J. Pierpont Morgan says "Incorporate." We don't need to incorporate; there need be no special frills, simply a modest organization to meet with our buying friends now and then, and jointly do all in our power to make the "rough" places smooth.

C. S. Van Wagoner, of Cleveland, pointed out that such an Association would be a success if they could get a man as President who would do as much for the manufacturers as William W. Supplee, of Philadelphia, had done for the Hardware jobbers during the three years that he had been President of that organization.

J. Hardy, Secretary Canadian Wholesale Association; R. R. Williams of the *Iron Age*, and Oliver Williams of the Bryden Horse Shoe Co., made valuable suggestions of the *modus operandi* of forming such an association.

Mr. Williams, of the Bryden Horse Shoe Co., Catasauqua, Pa., said that by forming organizations manufacturers get to know each other, and knowing each other trust each other. He told of the immense value accruing from an association in his line, and while some of his brother competitors formerly had elastic consciences he believed he had not found one of them in a lie in a year, and is confident that if an association is formed it will be successful.

Ex-Governor Goodell said that through organization all important enterprises are carried through, that enterprise combined with brains and capital were usually successful, that frequently we make blunders because we do not understand and know our competitors, that individual effort may not succeed, that individuals do not know all, but altogether may know all; that all successful business men first made failures, and young men fail before their business wits are sharpened.

John C. Schmidt, President of the Standard Chain Co., stated that as part of his creed is the spirit of getting together, and recalled in the recent labor difficulty the united action of the manufacturers. He told how at previous conventions at which the manufacturers had been attending as guests they usually had plenty of time hanging on their hands and did nothing, and did nothing badly; that during the executive session of the jobbers the manufacturers could meet comfortably and learn to know one another; that they then could meet persons and individuals and know their personality and not their name on a letter head. There would be no additional expense to attend the meeting of manufacturers while attending the meetings of the jobbers.

Mr. Irby Bennett, of the Winchester Repeating Arms Co., told of the advantages of the Ammunition Association, and was confident that if the manufacturers organized they would reap a benefit.

General Withington, of Withington & Cooley, Jackson, Mich., told of the advantages of the organization of which he is a member; that they regulate deliveries and freight allowances. They made a definition of the meaning of terms which has shortened the time and made the limitation as to the meeting of the guarantee. On motion the committee was appointed to formulate a plan for an organization about the meeting to be held to-morrow, after which they adjourned to meet at 9:30 to-morrow. The committee is as follows:

H. B. Lupton, N. A. Gladding, E. G. Buckwell, Fayette R. Plumb, C. S. Van Wagoner, W. H. Withington, F. S. Kretsinger, Thomas C. Coles (Am. S. & W. Co.), Fred S. Merrick and Oliver Williams.

THURSDAY MORNING SESSION.

The Hardware Manufacturers were called to order at 10:30 a.m., Thursday, by Chairman Garland, who for the benefit of those who were not present at Wednesday's session, explained the object of calling the meeting.

In response to the call of the chairman the following report of the committee appointed Wednesday was submitted by Mr. C. S. Van Wagoner.

Mr. Chairman—Your Committee appointed for the purpose of formulating plans for a permanent organization, begs to report as follows:

That this Association shall be known as the American Hardware Manufacturers' Association.

Object—To further the interests of the manufacturers and promote cordial relations with the distributers.

It is recommended that a permanent organization be effected, consisting of the following officers:

President, Fayette R. Plumb, of Fayette R. Plumb, Incorporated.

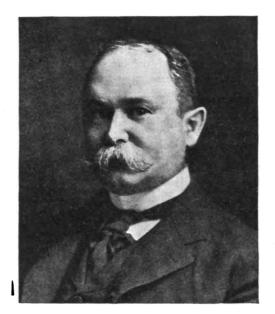

First Vice-President, Samuel M. Nicholson, of Nicholson File Co.

Second Vice-President, C. S. Van Wagoner, The Van Wagoner Co.

Third Vice-President, F. S. Kretsinger, Iowa Farming Tool Co.

Secretary-Treasurer, F. D. Mitchell.

Executive Committee—Robert Garland, Chairman, Standard Chain Co.; Henry B. Lupton, Oliver Iron and Steel Co.;

FAYETTE R. PLUMB.

N. A. Gladding, E. C. Atkins & Co.; W. S. McKinney, McKinney Mfg. Co.; Samuel Disston, Henry Disston & Sons; C. E. Adams, Cleveland Hardware Co.; Jas. Kelly, Kelly Axe Co.; J. C. Birge, St. Louis Shovel Co.

The committee recommends that the annual dues be \$10. On motion of Mr. Reitz the report was adopted.

W. H. Cole said he felt deeply interested in the matter of the forming of the association; that it should have been formed years ago. In forming the association there should be no sectional lines; all should be on equal grounds. He warned those present against the possibility of cliques controlling the association and suggested that the Executive Committee be enlarged in number so that every interest be represented.

Mr. Garland said that as far as his knowledge extended there was not even a suspicion of a clique and that such a condition should be guarded against.

H. B. Lupton said that the idea of the association was first presented by W. S. McKinney, of Pittsburgh, and he (Mr. Lupton), Mr. McKinney and Mr. Garland had sent out the invitations for the present meeting.

Oliver Williams next secured the floor and said that in making the nominations the committee had endeavored to select the best men from all parts of the country. He suggested that much time would be saved if the nominations of the committee were accepted at once.

In response to a question from G. E. Needham, Mr. Garland stated that the membership would include manufacturers of Hardware and allied lines. That a membership committee would be appointed later and would decide on all applications for membership.

In response to calls Mr. Garland then placed the report before the house and it was unanimously adopted.

Mr. Plumb came forward to take the chair and spoke briefly, first thanking those present for the honor conferred upon him. He said that he recognized the responsibility of the position and was confident that the Executive Committee would be able to transact the business of the association and promised to do his part.

He called attention to three questions deserving considera-

Cash Discounts—Nearly all manufacturers have adopted 60 days or two per cent. off in 10 days. That some jobbers seemed to think that this meant two per cent. off in 30 days. The steel manufacturers having withdrawn all cash discounts, it placed the Hardware manufacturer in a disagreeable posi-

Contracts-With steel manufacturers a contract is in black and white, and they always see that it is carried out to the

Special Brands—So many jobbers are demanding that their own brand be placed on goods, that if the practice continues the name of the manufacturer will be completely lost sight of and his money spent for advertising his goods be wasted.

Mr. Plumb then announced that the Executive Committee would draft articles of incorporation, name various committees and report to members at earliest possible moment. Mr. Plumb also warned those present against government by clique.

Mr. Garland moved that the president carry to the National Hardware Association at Thursday evening session the greetings of the new organization and convey to them something of what had been done. This motion was carried.

H. B. Lupton suggested that all present sign a temporary roll not to be binding until final organization had been pre-

Mr. Plumb stated that, of course, the membership committee would act on all names presented before they would be considered members.

Oliver Williams stated that while he did not wish to talk politics, he wished to say that he believed the policy of protection had been chiefly instrumental in assisting this country to gain its present position as an exporting country. He has been lately investigating foreign trade and finds that foreign buyers receive the American manufacturer now with open arms, a manner widely different from the reception given them up to a few years ago. He asked that the new association join with the National Association of Manufacturers in their effort to promote the cause of protection.

On the suggestion of Oliver Williams, the President called on Mr. Hobson, the London representative of the Iron Age, who spoke for several minutes on American trade in England and India.

The following resolution was then offered by Oliver Williams, of the Bryden Horse Shoe Co.:

Resolved, "That the American Hardware Manufacturers' Association be composed exclusively and strictly of manufacturers of goods handled by the Hardware trade."

The resolution was adopted without a dissenting vote. After the announcement by the President that the Executive Committee would at once take up the business at hand, the meeting was adjourned.

She—Is it true, dear, that when you proposed to me you didn't know whether I was worth a penny?

He-Absolutely. But I always was willing to take chances.

Noises and the Law.

Some decisions of the courts as to when a noise is a nuisance.

How to deal with the sounds which come within the nuisance classification will probably be one of the puzzling problems demanding solution at the hands of modern jurists and modern legislators. The petition filed in the Civil District Court yesterday in this city by Henry Denis, a prominent member of the New Orleans bar, against the Discalceated Carmelite Nuns to stop the almost continuous ringing of bells at the convent, at North Rampart and Barracks Streets, on the ground that the practice constitutes an actionable nuisance, again calls attention to the almost endless variety of sounds which are ceaselessly hammering on the eardrum of the man in the ctiy.

Among the bitterest and most vitriolic utterances Schopenhauer ever indulged in his gloomy quarrel with the world was the broadside which he hurled at the man who persisted in cracking his whip as he drove through the streets. Consistent with his erratic temperament, he gave the utterance a conspicuous place in one of his most learned essays. Other men of genius have shown similar antipathies, even unto the musicians who have died leaving behind them a mass of split notes and syncopated sounds to harass the hearing of those who survive them.

Art has played no inconspicuous part in the sound nuisances which have come into existence on account of the augmentation of population, and probably some of the many cases found in the law books grew out of the rendition of some of the world's masterpieces in music. At any rate, frequent complaint has been made of sounds of this character on the ground that they constituted an actionable nuisance, and the courts have been asked to suppress them. And in many instances they have been suppressed.

The courts have gone so far in some instances as to hold that the noise incident to an ordinary business may be a nuisance. In 1882 the question was raised in a Massachusetts case with reference to a factory bell, and the Court declared the ringing of the bell to be a nuisance within the meaning of the law. A similar conclusion was reached in another case where objection was made to the noise in a blacksmith shop, the hammering on the anvil and other noise incident to a blacksmith's work. But the courts have been as prudent as possible in cases where objection has been made to sounds arising in the ordinary course of business. They have been forced to observe more than ordinary prudence in dealing with this phase of the question, because of the increase in the amount of noise incident to business methods.

But the bell has probably played a more conspicuous part in jurisprudence than any other instrument of sound, and in many instances the learned judges have yielded to the alluring opportunities to humor the sentimental side of their nature in dealing with these cases. In the early English case, in 1851, Kindersley, who rendered the decision, took occasion to make a philosophic reference to the bell, touching upon the pleasurable sensations of the sound, as well as the disagreeable part of it. He said:

"Now, a chime of bells may be, and no doubt is, an extreme nuisance to a person who lives within a few feet or a few yards of those bells; but to a person who lives at a distance from them, although he is within reach of the sound, though he is within the sphere of their operations, within the influence of their effect, so far from being a nuisance, an in-

convenience, it may be a positive pleasure."

The test laid down in the books is that any "noise which constitutes an annoyance to a person of ordinary sensibility to sound, such as materially to interfere with the ordinary comfort of life, and impair the reasonable enjoyment of his habitation, is a nuisance to him." This is the doctrine applied in American cases, and it was even applied in a New York case where objection was made to the noise of a trade, and while holding that the noise of a trade was not a nuisance per se, the Court concluded that it might become so on account of the manner of conducting the business.

The problem in the future will probably be dealt with scientifically. Specialism in medicine has already blazed the way for a more careful attention to the senses, and the injury to the hearing capacity consequent upon unusual noise has already been suggested. It destroys that discriminating nicety in hearing which the artists in music are so much interested in, and the scientific man may call a halt lest the time come when one may not catch the softer sounds of the world.—New Orleans Times-Democrat.

THE JEWETT DRY AIR REFRIGERATORS The "QUEEN" Double Door WITH PATENT REMOVABLE ICE CHAMBER
Patented October 21, 1884

OUTSIDE—Ash, Antique Finish. INSIDE—Zinc, with Wood Backing. WALLS—Packed with Charcoal, with Heavy Paper each side. ICE CHAMBER—Heavy Galvanized Iron, with Corrugated Ice Rack. SHELVES—Galvanized Iron, Slatted. TRIMMINGS—Polished Brass. CASTERS—Maple, with Patent Spring Socket.

POINTS IN THIS REFRIGERATOR

FIRST—The Ice Chamber is removable. SECOND—Ice Chamber and Shelves removed, the entire inside is exposed for cleaning. Third—The four sides of the Ice Chamber are exposed to the air, answering the double purpose of throwing off cold and condensing the moisture, rendering the air DRY AND VERY COLD. FOURTH—OUR PATENT COLD BLAST—the system of circulation and rotation of air—forces a constant stream of ice-cold air into the provision compartment. Fifth—The simple construction of this Refrigerator reduces the cost for repairs to a minimum.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Albany, N. Y.—The Graham-Fox Motor Co., of New York City, has been incorporated to manufacture motors and automobiles. The company has a capital of \$500,-200, and the directors are Frank A. Fox and David F. Graham, of Stamford, Conn.; James J. Thornley, Jr., of Brooklyn; C. G. Weaver, of New York City, and W. D. Blake, of Richmond Hill, Long Island.

Camden, N. J.—Punctnot Tire Co., with \$1,000,000 capital, has been incorporated to manufacture non-puncturable tires. Incorporators, L. C. Wirth, C. S. Bisworth, William F. Eddell.

Chicopee, Mass.—Sam Kelley has opened a bicycle repair shop on Mortgomery Street.

East Hartford, Conn.—James Lester has opened a bicycle repair shop at 86 Hartford Avenue.

Jersey City, N. J.-American Rubber Works have been incorporated with principal office, New Jersey, Registration & Trust Co. building, 525 Main Street, East Orange, N. J. Objects, manufacturing rubber tires, etc. Capital, \$1,000,000. Incorporators, G. H. Huntington, I. S. McGiehan and John W. Wilcox.

Tuckahoe, N. Y .-- Herman Mester.

Changes and Improvements.

Cadillac, Mich.—C. D. Shepard has removed to the Olson Building, on South Mitchell Street.

are branching out somewhat and have now established a branch store at the corner of East Green and Wright Streets. The stock consists of a general supply of photographic, golf and the various athletic supplies. Andrew J. Creighton is in charge of the new store.

Greenwich, Conn.—C. J. Ferris has moved Kirkpatrick Saddle Co. his bicycle business into the store recently occupied by Adam Zink, who has moved to Stamford.

Islip, N. Y.-Joseph Downs has removed Powers' interest. to larger quarters.

Haynes-Apperson moto-cycle manufactory has been determined upon, and it will probdoubling the capacity.

removed to Tifz Block.

Nashua, N. H.-Lintott & Buswell have dissolved partnership; Mr. Lintott will continue business.

Penn Yan, N. Y.-Wilkins & Ellis have purchased repair business of Reed Bailey.

for the stock which he carries.

Rome, N. Y.—A new factory building for the manufacture of fishing rods and sporting goods will be erected this fall on the old tannery site on Jasper Street. The building will be as large as the premises will accommodate and twenty-five workmen will be employed on the start. The new industry will be established and operated under the management of Clark, Horricks & Co., a sporting goods firm which has been engaged in business in Utica during the past fifty years. John F. Pepper, of this city, who has had considerable experience with this line of manufactures, has accepted the position as superintendent of the new concern.

St. Catherines, Ont.—The Co-Operative Cycle and Motor Co. has not proved to be a success. An order has been granted at Toronto winding up the concern upon the application of the Dunlop Tire Co., of Toronto, creditor for \$5,000. The total liabilities are estimated at \$50,000. Justice Lount subsequently appointed the National Trust Co., of Toronto, liquidator. The company made an assignment to the Trusts and Guarantee Co. recently, but this is now void.

St. Paul, Minn.-C. J. Smith & Co. is the new title under which the business of the C. J. & F. E. Smith Co. will hereafter be conducted. The interest of F. E. Smith has been purchased by C. J. Smith.

Spencer, Ia.-A. Wilkins sells half interest to M. Vanitor.

Springfield, O. - Charles McCutcheon, Champaign, Ill.—Cunningham Brothers formerly with the American Saddle Co., and Thomas J. Wetzel, who was connected with the Kirkpatrick Saddle Co., have joined forces and will open offices in Chicago as manufacturers' agents. They have a number of desirable lines of goods about closed for, and are looking for others. Their temporary address is care of the

Doubleday Co. and the Frontenac Cycle 124.62, and his assets \$1,014.67.

Pittsfield, Mass.-W. J. Devall, the Bank Co. has been amalgamated, and the com Row bicycle dealer, has leased the vacant panies have moved into the same quarters. store in the Burns Block. He has had the The W. A. Doubleday Co. did a jobbing store fixed over, and has moved his stock and retail bicycle business at 315 South there. His former quarters were too small Warren Street, and the Frontenac Co. was located at 325 South Warren Street. Both are now at the latter place, additional room having been provided. The change has already gone into effect. At the annual meeting of the Doubleday Co., before the change was brought about, a dividend was declared on the stock. W. A. Doubleday, E. P. Black and G. E. Hancock were elected directors. They elected Mr. Doubleday president; Mr. Black vice-president, and Mr. Hancock secretary. The new concern will do a jobbing and retail business in bicycles and sundries. They will also job automobiles. Those made by the Stearns Steam Carriage Co., in this city, will be handled at first, and possibly others later. W. A. Potter, who was manager of the Frontenac Cycle Co., will have charge of the retail department, and Mr. Doubleday of the wholesale department.

> Syracuse, N. Y.-Frank Land, former secretary of the I. A. Weston Cycle Co., has sold has interest in that company to H. Romeyn Smith, who has been elected secretary and treasurer. I. A. Weston retains the office of president. The Weston Co. manufactures parts for bicycles and motor vehicles.

Toledo, O.-Norman DeVaux has purchased the retail business of E. G. Eager & Co., 324 and 326 Superior Street, and will make the latter place his headquarters, closing his Jefferson Street and East Side stores.

Wellsboro, Pa.-J. W. Butts, who, during the past few years, had built up an excellent business in selling bicycles and sporting goods, has sold his store in the Coles House Block, to Hon. W. E. Champaign, who took immediate possession.

Westfield, Mass.-Fred H. Cooley, the bicycle dealer, has decided to add to his store at 22 Arnold Street, a full line of rubber goods and has a stock of them already in.

THE BURR PATENT STEEL

SAFETY LIFT BLOCK.

A Perfect Self-Locking Rope Tackle Block.

Runs as freely as an ordinary rope tackle block.
Holds more securely than a chain block.
Locks instantly and does not cut the rope.
Allows the load to be lowered safely and slowly,
the operator using only one hand.
Cannot stick nor jam when the load is to be
lowered.
Adopted better

lowered.
Adopted by the Penna. R. R. Co., Western Union Tel. Co., and many others.

Length of Block,
Rope best suited for use, 4 3 4 5 6
Rope best suited for use, 4 36 4 5 6
Rope best suited for use, 4 36 4 5 6 Triple,

THE BURR MANUFACTURING CO.,

Viaduct Block, Cleveland, Ohio, U. S. A.

" Hold Fast " Wire Grip.

The above cut represents the "Hold Fast" Wire Grip, for wire stretching, manufactured by us exclusively. This simple, durable, practicable and cheap device fills the place of a long desired tool for that purpose. The eccentric part being made from the very best 1½ inch round steel, knurled on its surface to just such an extent as to not injure the material handled by it, and then tempered in oil to such a degree as not to be easily torn, it readily takes the place of the more expensive wire grips in the market at the present time. This Grip will take from Nos. 2 to 13 wire, Brown and Sharpe Standard Wire Gauge.

Means time saved, trouble saved, temper saved and, consequently, money saved.

Assures accuracy, thereby saving you the necessity of apologizing to yourself or to some one else for errors.

Comprises 200 pages of conveniently arranged tables, embracing 120,000 computations, giving the net of any sum at almost any combination of complex discounts.

REGULAR EDITION, - - \$3.00. DOUBLE INDEXED, - - 4.00.

Sent post-paid on receipt of price by_

Digitized by Google

THIS shows the construction of the ROCHESTER (stove-pipe) RADIATOR.

THIS has been extensively advertised for years.

THIS is the one your customers have frequently asked you about.

THIS is built like a steam boiler.

THIS has nine-tenths of its radiating surface directly over the hot current where every square inch of surface is as effective as six at the side.

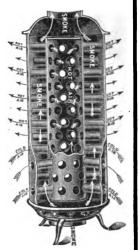

THIS gives the results that have so surprised those who have used them and induced our patrons to do so much missionary work for us. Your patrons will gladly do it for you, if you give them the opportunity.

Get a few started and after that they will almost sell themselves.

ROCHESTER RADIATOR CO.,

A Silent Partner.

A prominent business man, whose opinion is held in high repute, discussed the trade press with a writer in *Electricity* recently, and his observations are interesting and instructive.

"Trade journalism," said he, "is to the trader an index, educator, informant, teacher, profit-gatherer, counsel — in short, the prized silent partner. The trade paper is an insurance against the dishonest, tricky salesman; is the champion of the trader against unjust charges or rules, whether attempted by a railway organization or an individual; it is the advocate of organization, the mouthpiece of associations; their champion and defender—therefore, worthy of the support of every one interested in co-operative effort.

"Primarily, the trade journal is for the dealer, the man so anxious to concentrate all his energy upon his business that he seeks all aids, and is willing to pay for news or information that is calculated to push him forward to success.

"The trade journal is a tool of business. If the tool is poorly tempered, of weak constitution and untidy appearance, it will exert no influence, do more harm than good; turn traders into blunderers and live a short life. If, on the other hand, this tool of trade is well tempered, put together in attractive style, has force, a moral tone, and puis character first, it will live and thrive, and as it grows older exert more and more influence-secure respect for its opinion. The trade journal, then, to be a power, to have merit, to become the trader's tool, must be worth paying for. It must have individuality of its own, for in this world men count for more than method.

"By taking a trade paper you become an associate worker for your own and other's benefit, and thus carry out the highest ideals of conduct. You should ever keep in mind the old proverb, 'A man of knowledge increaseth in strength.'"

THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior qualityensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

The checking medium is an oil which is practically non-freezing, and which can readily be renewed when needed without removing

HARDWARE

Davis & Davis, who have been advantageously located at 709 G Street, N. W., Washington, D. C., where they have achieved a reputation as expert patent lawyers, and prominent in their line, have recently established a New York office in the St. Paul Building, corner Broadway and Ann Street, where one member of the firm may always be communicated with, remaining constantly in that location. The Washington member of the firm gives his personal attention to all matters connected with the Patent Office modes of procedure.

The Cleveland Twist Drill Co. announce having received the highest award at the Pan American Exposition. The gold medal so worthily bestowed, gives great satisfaction to their many friends in this vicinity.

F. E. Myers & Bro., Ashland, Ohio, whose pumps have a world-wide reputation, humorously state that the Committee on Awards of the Pan American Exposition have undoubtedly agreed to "Take off your hat to the Myers" by awarding them the only gold medal awarded on pumps, thus acknowledging a meritorious construction and adaptability worthy of commendation. This ought to prove quite a feather in the Myers hat.

The Magnolia Metal Co., on account of a fire next door to their old offices in West Street, New York, were compelled by damage done through falling walls, to move to other quarters. Their office is now located in the Wool Exchange Building, corner of West Broadway and Beach Street.

At the distribution of Pan American awards, we notice the "Fort Madison" steel goods of the Iowa Farming Tool Co., Fort Madison, Iowa, received the gold medal, the highest award given for superior merit.

The Youngstown Iron Sheet and Tube Co. announce that they will have in operation by January 1, 1902, their new sheet mills, so that orders for delivery during the four early months of 1902 are now being entered for specified delivery during those months. Orders are solicited for Double refined puddle iron sheets, Common iron sheets, Steel sheets, Black and Galvanized.

Keuffel & Esser Co., 127 Fulton Street, New York, the well-known manufacturers and importers of drawing materials and manufacturers of measuring tapes, have been awarded the gold medal by the Pan American Exposition, and which they state was the only gold medal awarded to their especial line of business. It is a matter of sincere congratulation by their many friends and customers that superior merit is thus consistently recognized.

C. S. Van Wagoner, formerly of the Van Wagoner & Williams Co., has formed a new company under the name of the Van Wagoner Co., of which he is president, for the manufacture of a line of popular Hardware specialties similar to those made by his old firm. A large number of new specialties will also be included. He expects to be able to start manufacturing in Cleveland on or before January first next. The offices of the Van Wagoner Co. will be situated in Cleveland and New York. Mr. Van Wagoner has always been popular with the jobbing trade, whose value as the proper distributers of leading lines of goods he has invariably recognized. They express every confidence in the success of his new venture.

O. L. Millard, president of Millard Bros., Ltd., 123-124 Houndsditch, London, E. C., England, who sailed on the Etruria, October 12th, for New York, will make his head-quarters here at the Fifth Avenue Hotel during his brief stay, as he expects to return by the Campania sailing November 2. The principal object of the trip is to conclude contracts for 1902, and establish connections for the sale of new lines in the Hardware and bicycle trade. The firm he represents are direct importers of American and Continental Mechanics' Tools, Skates, Cutlery, Hardware and Bicycles.

Manufacturers' Advertising Bureau, 126 Liberty Street, New York, Benjamin Romaine Western, proprietor, have recently distributed a very interesting booklet of 26 pages having reference to their business. It is oblong in shape, and gives a very clear idea of the improved methods which they are bringing to bear in the advertising field. This old agency was established in 1877, and have ever since been large users of advertising space in trade journals. The Bureau is in business to "take entire charge of newspaper work and advertising of manufacturers who desire to have that department of their business run systematically and profitably, and who have themselves not the time or experience necessary to bring about the desired result." Mr. Western has long been well known in the advertising field, having served as a trade journalist before entering upon his present extensive business. Included in the contents of the book are a number of testimonials of clients of the Bureau, and also a list of the important concerns for whom they have acted in placing advertising.

Caldwell Mfg. Co., Rochester, N. Y., have recently issued an extremely artistic publication referring entirely to Marine Window Hardware, Sash Balances and Sash Locks, used in marine construction, and although composed of but a few pages, they are prepared and executed in such a manner as to leave an impression that could scarcely have been made in any other way. Everything about the publication is of an asthetic character, a great deal of care having been taken in the preparation of this brochure. The illustrations are handsomely printed on coated paper, and mounted on gray mounting paper, and show off to the best advantage. List prices accompany the text, in which the trade number of the Marine Balance is given, the price per pair and the weight of sash that is applicable to each particular size, the length of run, the width of face plate, and the depth of mortise necessary for their proper adjustment.

Simmons Hardware Co., St. Louis, Mo., have recently distributed to the trade their "Catalogue 403" representing the Clock and Art Goods department of that large concern. is in pamphlet form with a very attractive cover, printed in purple and bronze, making a volume of 370 pages, and embodying in its contents an extremely large variety of goods thoroughly suitable for the holiday trade, including Sterling Silver, Silver-Plated Ware, Cut Glass and Cutlery generally. The assortment of each of these special lines is very elaborate, large in extent, handsomely illustrated and fully described. It is certainly one of the most useful catalogues of the kind that we have seen, many of the pages being printed by the three-color process in a handsome and attractive manner, showing their fine decorated Vases, Clock Sets and Metal Urns and Imported Decorated Urns, Reception Lamps, etc., etc. These represent in their pictorial illustration some of the handsomest designs in colors that this concern has ever distributed to the trade.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

Reports continue most favorable from all quarters. Travelers' orders come along regularly, and are of respectable dimensions, the dealers' stocks being kept in satisfactory condition so that no sales of importance shall be without a shipment. Holiday goods that promise a popular distribution are eagerly inquired for, the indications for a lively holiday business being excellent. Few except those catering to this class of trade realize how great a volume of such goods is called for and secured, to be disposed of at fair profits in the short season centering about Christmas. As the prophets are anticipating an old-fashioned Winter, with plenty of ice and snow, the specifications are already including goods suitable for such a season.

Prices throughout all channels indicate commendable firmness, all heavy goods especially being marked up to some extent, based on the inability to get full supplies of raw material, notwithstanding the mills supplying such a demand are doing their level best to overcome the handicap which the long-continued strike created as to a seasonable delivery of their production.

A number of lines of goods are reported in scant supply, which include Cross-cut Saws, Skates, Axes, Plain and Barb Wire and Sheet Steel generally. Orders given last Spring for special lines wanted for the current sales at this time, have by no means been completed in all respects, and the active trade which is a noticeable feature in all leading business centres, makes such limited deliveries seem inconsistently slow.

The Rope market has been in an excited state for several weeks, the continued advances in regular quotations making an unsettled and uncertain market. Present indications point to a future of high prices with little prospect of any immediate decline of striking importance. The Steel goods market is now an open one, and the carefully kept agreement on regular quotations having been sustained for a much longer period than was deemed possible, now gives way to a change that makes the market more uncertain in its character.

Outside competition is beginning to show sufficient importance in such goods which like scythes and shovels have created a demand for new factories, the older conditions indicating profits beyond the ordinary comprehension, giving opportunities for idle capital to embark in new enterprises.

The Wire Nail plants which have been springing up in so many directions prove beyond a doubt that present quotations are profitable. The slight cut in prices on so limited an output is calculated to have but little effect on the quotations from the main source of supply. The American Steel and Wire Co., still behind orders, preventing promptness in delivery, are already on record as declining to meet the quotations made by the small producers.

So much activity in building is developed in all sections of the country, the demand for Builders' Hardware continues excellent. During these prosperous times a growing inquiry is noticeable from the well-paid employes for houses of a moderate rental; and unimproved property is being largely improved by the erection of a class of dwellings which promise to pay good dividends on the investment.

Collections are reported as being above the average, and in every direction the word is passed that there is no cloud upon the horizon, everything pointing to a continuance of the sunshine of National prosperity.

The Commerce of the United States with the Territory at the South.

The recent departure from Washington of the special train carrying the United States and numerous other delegates to the approaching Pan American Conference, to be held at the city of Mexico, lends especial interest to some figures on the commerce of the United States with the territory at the South, which the Treasury Bureau of Statistics has compiled for the convenience of the United States members of that congress. The importance of development of our commerce in this particular direction is pointed out by this publication, which shows that our exports have shown less growth to the countries of Central and South America than to any other parts of the world.

"The commerce of the United States with the American countries lying south of her borders," says the opening page of this discussion, "has long been an object of solicitude to her statesmen, economists and business men. With the English-speaking people of American territory lying upon the north, her commercial relations have rapidly grown and proven mutually satisfactory. With those of another language, occupying the contiguous territory at the south, the growth has been slower and less satisfactory, and as the distance increases the growth decreases. To British North America the United States supplies 52 per cent. of the total imports for consumption; to Mexico, equally adjacent, but speaking another language than our own, 40 per cent.; to the Central American States, next removed by distance, though readily reached by water and now being tapped by railways, 35 per cent.; to Colombia, a trifle farther removed, but equally accessible by direct water communication, 33 per cent.; to Venezuela, equally accessible, 27 per cent.; to the West Indies, which lie in close proximity, but which have been up to the present time controlled by commercial nations whose policy in many cases has been to retain their commerce for their own people, 20 per cent.; to the Guianas, also readily reached by water, 25 per cent. of the imports of British Guiana, 17 per cent. of those of Dutch Guiana, and but less than 6 per cent. of those of French Guiana.

"Up to this point the study of the growth of commerce between the United States and other American countries is fairly satisfactory. Beginning with 52 per cent. of the import trade of Canada, 40 per cent. of that of Mexico, and ranging on downward along the Gulf of Mexico and Caribbean Sea, a fairly satisfactory share of the commerce of those countries is enjoyed by the people of the United States; though it will be conceded that her people have a right to expect a larger share of the commerce of the countries lying so near at hand, especially in view of the fact that our purchases from them are much larger than our sales to them. Even this somewhat unsatisfactory condition of trade with the countries bordering upon the Gulf of Mexico and the Caribbean Sea is, however, gratifying when compared with the traffic relations of the United States with the countries of South America bordering upon the Atlantic and Pacific oceans. Of the total imports of all South America, 87 per cent. is taken by the countries bordering upon the two oceans, and but 13 per cent. by those upon the Caribbean. On the eastern coast of South America we find Brazil importing in 1899 goods to the value of over \$105,000,000, of which the United States supplied about 10 per cent.; Uruguay and Paraguay, \$26,000,000, of which our share was less than 7 per cent.; and Argentine, \$112,000,000, of which about 10 per cent. was from the United States; while a tour of the Pacific coast shows imports into Chile of \$33,000,000, Peru \$8,500,000, Bolivia \$11,600,000, and Ecuador \$7,000,000; the proportion from the United States averaging about 10 per cent. Thus the northern coast of South America, fronting on the Caribbean Sea, imports goods to the value of \$26,000,000, of which we supply an average of 25 per cent.; the eastern coast, fronting upon the Atlantic, \$275,000,000, and the Pacific coast, \$60,000,000, of which our proportion is in each case about 10 per cent.

"Nor can it be urged that this condition is a temporary one. While exports from the United States to Mexico have grown rapidly, especially since the opening of railway communication, and have experienced a moderate development in the case of the countries bordering upon the Caribbean, the total sales to the south of us have not grown with the rapidity which has characterized those to the world at large. In 1868, our sales to the countries lying south of us were 205 of our total exports; in 1878, a little less than 10 per cent.; in 1888, a fraction above 10 per cent.; in 1898, but 7 per cent.; and in 1901, about 9 per cent. of our total exports.

"An examination of our list of purchases from Central and South America seems to increase the anomaly presented by their small purchases from us. Of Brazil, we are by far the largest customer in her chief articles of export—coffee and rubber—while from Argentina and Chile our purchases of wool and hides are also heavy; and for the tropical products of other countries of South America—sugar, spices, fruits, dyewoods, cabinet woods, textiles and chemicals—the United States offers a constant and rapidly increasing market. From the countries of South America the United States in 1901 purchased goods valued at \$110,329,667, while her sales to them in that year were but \$44,770,888, less than one-half of her purchases from them.

"A study of the map of the world seems to offer a partial explanation of the anomalous conditions with reference to the

trade of all the countries lying south of the easternmost point of South America. The commerce of the world reaching Brazil (south of the Amazon), Uruguay, Paraguay and Argentina, on the Atlantic coast; and Chile, Peru, Ecuador and the interior State of Bolivia, on the west, must reach them by water, and their sales to other parts of the world also go by water. It will be seen that the markets of Europe are practically as near to all South America fronting on the Atlantic and Pacific as are those of the United States. An examination of the map and of the distances actually traveled by the great steamships following the usual course of commerce sustains this assertion. The easternmost point of South America extends 2,600 miles farther east than New York, and the sailing distance from that point to New York is actually greater than to the cities of southern Europe, and but slightly less than to the commercial cities of England and Germany, our greatest commercial rivals. This fact alone places the United States upon an equal footing with Europe in the matter of distance; but in view of the fact that nearly all of the steamship lines entering South American ports are controlled by European capital and European interests, it is not surprising that a large share of the commerce of those countries should be diverted to Europe. Naturally a considerable share of their exports go direct to Europe, and to that extent it would be quite reasonable to expect that their purchases would be from that part of the world.

"The fact that exports from the United States to Europe greatly exceed her imports from Europe make it practicable for the vessels which bring the rubber, coffee, hides and wool of South America to the United States to readily load at our ports with grain or provisions for Europe, and there load again with goods for the South American markets, thus making the tour of the triangle of which the line from New York to Liverpool forms the base, and the ports of Brazil and Argentina the apex. That this should occur under ordinary conditions would not be surprising, and that it should occur with lines of steamships controlled almost exclusively in the interests of European capital and European trade is to be expected. Added to this is the lack of banking and business facilities for direct intercommunication with the United States, neglect of American merchants to closely study the trade methods and requirements of the countries in question, the absence of direct solicitation of trade in the language of the country where business is sought, all of which are valuable aids in increasing the commercial relationship, and especially in increasing our sales to the countries in question."

| Eighth Annual Sportsmen's Show.

The first Sportsmen's Show was held in 1895, since which time improvements have been made annuallly, and the 1902 show, which will open March 5th, will be no exception to this rule. The arrangements now being made will make it a most picturesque show, and one complete in every feature that attracts the attention of the sportsman and every lover of outdoor sports. Particular attention is called to a Fly Casting Contest which will be an additional feature of the show this year. This will appeal strongly to the many fishermen in and around New York City, as well as those from a distance, as this is a matter regarding which they are very Rifles and Revolver Contests will also be enthusiastic. given. The trade exhibits will occupy space in the gallery, the main floor being taken up with exhibits of camps, guides, woodsmen and trappers, live game animals, game birds and game fishes, railroads and hotels from fishing and hunting sections, log cabins, and new features of life in the woods, which promise to prove popular features. Those desiring to make exhibits are requested to make early application in order to secure a good location. A diagram giving details as to space and general arrangements has been issued by the National Sportsmen's Association under whose auspices the show will be given, and this, in addition to full particulars. will be forwarded on application to the general manager, J. A. H. Dressel, P. O. Box 1353, New York City.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to sek any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. '277 Broadway, New York City.

Appointment of Receiver.

QUESTION: I am a creditor of a man having quite a large business, which business is being ruined through his inattention, and for this reason the interests of his creditors are being impaired. I am a creditor to a large amount, and should like to know in what case a receiver could be appointed by the court to take charge of this man's property, as, if he continues to control it, I greatly fear that I will not receive anything on my claim.

REPLY: We are of the opinion that under such circumstances you would be able to have a receiver appointed of your debtor's business. Section 713 of the N. Y. Code of Civil Procedure provides that, in addition to the cases where the appointment of a receiver is especially provided for by law, a receiver of property, which is the subject of an action in the Supreme Court or county court, may be appointed, before final judgment, on the application of a party who establishes an apparent right to or interest in the property where it is in the possession of an adverse party and there is danger that it will be removed beyond the jurisdiction of the court or lost, materially injured, or destroyed. Other provisions are also made for the appointment of a receiver. We would advise you to consult a lawyer and commence an action against your debtor with the view of obtaining a receiver of his property.

Statute of Limitations for Actions for Libel.

QUESTION: About two years ago an enemy of mine published an article concerning me and my business which was grossly false and which injured my trade a great deal. I did not desire at the time to sue him for libel for various reasons, and I should now like to be informed whether I still have my right to bring an action or whether I have waited too long.

REPLY: The statute of limitations in New York State provides that an action for libel must be brought within two years after the action has accrued. If, therefore, two years have not expired since this letter or article was written, you will still have your action. If, on the other hand, you have waited more than two years, your action would be barred by the statute in question.

Effect of Violation of Clause in Insurance Policy.

QUESTION: I had an insurance policy on my house and barn for the amount of \$2,000. There is a clause in the policy of insurance which provides that the policy shall be void if mechanics or workmen are employed on the premises for more than fifteen days at one time. I was not aware of this clause being in the policy until it was called to my attention by the insurance agent after a fire had occurred totally destroying my house and barn. I had been having certain alterations made in the house and the repairs had consumed about twenty days. I should like to be informed whether, in your opinion, the mere fact that I had employed workmen for about twenty days without notifying the insurance company and obtaining their consent, is any reason why I should not be entitled to collect my insurance.

REPLY: The clause which you mentioned is one which is usually inserted in fire insurance policies. We are of the opinion that the courts of this State would regard this clause as a condition in the policy which, if violated, would render the policy void. The Court of Appeals of this State, however, recently took this view of a similar clause in an insurance policy, in a case recorded in 57 N. E. R. 475. In this case painters and carpenters had been employed by the insured for slightly over fifteen days, making a few alterations upon the insured premises. The consent, in writing, of the company was not obtained, and, after a fire had occurred, the insurance company refused to pay the loss, upon the ground

that this condition in the policy had been violated. The insured brought suit against the company and his suit was dismissed by the trial court and the action of the trial court in so doing was upheld by the Court of Appeals.

Evidences of Oral Agreement Contradicting Written Contract Inadmissible.

QUESTION: About five years ago I made a contract with certain manufacturers to act as their general agent throughout the State of New York. The contract provided that either party should have the privilege of terminating it upon notice being given. At the time the contract was made I had a long talk with the president of the manufacturing company, in which I stated that I would under no circumstances consider making the contract unless the company would agree, if they decided to terminate the contract, not to interfere in any way with the business that I had established. This the president assented to and stated that the company would certainly not interfere with any business I had established if they decided to terminate the contract. Relying upon this, I entered into the contract. The company recently decided to terminate the contract and they have in every way violated the agreement I had with the president of the company, and have interfered with the business I have established. Have I not the right to sue the company for damages for their violation of their contract?

REPLY: We are of the opinion that you have no cause of action against the company upon the facts stated. On a certain day you entered into a written contract with the corporation, the terms of which were definite and complete in themselves. There was no provision in the contract by which the company agreed not to interfere with the business established by you on their termination of the contract. If you were allowed to prove this oral agreement you would contradict the terms of the written contract, which the courts have repeatedly held to be improper. This oral contract was a part of the written contract, but did not constitute an independent and collateral contract. We are of the opinion, therefore, that evidence of this would would be inadmissible. This view is sustained by the Court of Appeals in 57 N. E. R. 470.

The South British Trading Co.

At the Hardware exhibition, a representative of The Hardwareman came across the stall of the South British Trading Co., and was fortunate enough to meet the managing director, J. Friedenstein. Having heard that this company conducts its business on novel and unique lines, and knowing that its methods had somewhat puzzled the retail trade of this country, our representative determined to get at the truth of the matter. He found Mr. Friedenstein enthusiastic and both willing and able to talk frankly upon the whole subject. Although interrupted every now and again by passers-by, the following is the gist of Mr. Friedenstein's remarks:

"Yes, it is quite true that we are not yet quite understood either by the retailer or, for the matter of that, by some of the factors. It is equally true that we have eight travelers spending the whole of their time doing missionary work amongst the retailers of this country, and yet we do not sell a pennyworth of goods to any of them! You look surprised. Then I will explain. The South British Trading Co. does an exclusively agency business. We represent about thirty American manufacturing firms, all of whom have some specialty of one sort or another, and all of whom, in our opinion, have something worth selling in this country. Look around here and see what we have got. Here are the Griffin pressed steel shelf brackets, both fixed and folding. There you see a variety of the Bardsley door checks and springs. Here is a line of Payson's signal sash locks. Over there you will find some high-class wood door furniture. Come in here, and just round the corner are some oil and gas stoves, whilst in that show-case there are some lovely tool grinders. We have wrenches and saw sets, hack saw blades and frames, Fox's combined square and mitre, household specialties, including

pokers, shovels, frying pans, glue-pots, hatchets, hammers, not to mention that show-case containing a beautiful selection of the Cincinnati Tool Co.'s goods. I could talk about those tools for half an hour. We also have the complete line of padlocks and cabinet locks as manufactured by the Corbin Cabinet Lock Co. Well, our travelers are around all the time showing samples of these various goods to possible buyers in England, Scotland, Wales and Ireland, and I am just off to the Continent to do a very thorough European tour. And yet we do not sell a pennyworth to the retailer. How, then, do we do it? Every order we receive we turn over to some factor to whom we have sold some of our goods in bulk. The goods our travelers have sold are at a fixed price, always allowing a recognized discount which enables the factor to sell our principals' goods at a satisfactory profit. You see, it is another variation of the prices maintenance scheme, about which The Hardwareman has already waxed enthusiastic. Those factors who are our clients know perfectly well that our travelers sell at prices which will enable them to supply the goods at a reasonable profit, whilst upon the other hand, the factors agree with us to sell at certain specified prices and rates of discounts. It all works like a machine, you see. When one of our travelers has shown his goods, the retailer will want, perhaps, to make up a sample order. So said, so done. Then our traveler produces a list of factors, and it is ten to one that the customer is in the habit of dealing with one or other of them. The next thing is for the customer to decide through what factor the goods shall be delivered. The order may go complete through one factor, or it may be distributed amongst two or three. On the order sheets which come in from our travelers, provision is always made for stating the names of the factors who are to do the business. When we receive the orders every morning, we always turn them over to the factors specified on the order sheets. Sometimes no factor is specified, in which case we use our own discretion. Sometimes we have orders which no factor will execute, in which case, I am sorry to say, the order remains upon our books waiting for the time when either the factor will change his mind or some other factor will come along. 'Very pretty,' you say, 'but where do we come in? We come in when the accounts are made up by our principals. We will not undertake to sell any goods in this country unless we have the exclusive agency, so that our commission is secure at that end when the books are made up, and the full extent of the British business is disclosed. Yes, it works out excellently. The factors are pleased; our principals are pleased, for they get their cash promptly; we are pleased, for we get our commission; the retailer is pleased, because he has not to open up new accounts; our travelers are pleased, because they have something novel to talk about, and a good talking line is half a battle, as you know. Make it quite clear, then, to your readers that we transact all our business through the prominent factors of this country. Our methods are gradually becoming known, and I may tell you, are much appreciated by factors and merchants, particularly in the Midlands. We are in the third year of our existence, and I may tell you that I am entirely gratified with the results. It is curious, certainly, that every now and again a factor will refuse to execute an order, even when the customer is worth the credit. The other day I handed an order over to a firm of merchants. It was refused for the curious reason that they did not do business in that part of the country. Queer, isn't it? I never heard of an American firm refusing orders on those grounds. However, every firm knows its own business best, although sometimes they have little idiosyncrasies which would make you smile. Yes, I like doing business with Englishmen; and Englishmen have a growing predilection for American goods. It is we American agents who are the real ambassadors of peace. We promote good will and strengthen what Carlyle called the 'cash nexus." "-The Hardwareman, (England).

Synopsis of an Address Delivered by A. C. Rulofson, to the San Francisco and Oakland Retail Hardware Dealers' Association.

It is some thirty-two years since I entered the employ of the Russell & Erwin Mfg. Co.'s branch house at San Francisco. During all of these years I have had many experiences. I cannot call to mind a pleasanter one than that of this evening, in meeting for the first time, the members of the Retail Hardware Dealers' Association of San Francisco and Oakland, but I cannot but feel a certain degree of sadness when I look over this assemblage and miss the familiar faces of those who have gone across the river, having laid aside the trials and tribulations attending the conduct of a retail Hardware business.

I have fondly imagined that I knew intimately every retail Hardware merchant in San Francisco, basing this belief on my long experience in the trade. It is evident that I have overlooked the fact that a quarter of a century has hurried by, and the reaper has been busy among my friends in the retail Hardware business, and as I glance about me I see now only a few—less than a half a dozen—of those who were engaged in the Hardware business when I entered it, and they, like myself, were small boys, just entering their teens.

It may be interesting to many of you younger men to have a short history of the Hardware business in San Francisco.

In 1868 there were twelve or fifteen large wholesale Hardware houses in this city; comparatively very few retail houses.

The wholesalers were wholesalers in name only. They would sell you anything from a steam engine to a paper of tacks, consequently there was no room for the small dealer. These large houses, however, were conducted very much on the "go as you please plan"—were not only engaged in the wholesale and retail Hardware business, but were also endeavoring with might and main to wipe each other out. While the profits were liberal and the condition of the country was prosperous and growing, these houses have all passed away, one after the other, and if you would take the names from the tombstones in the Commercial Graveyard, you would find every wholesale Hardware concern established in this city, with the exceptions of the firms of Conroy & O'Connor, now Dunham, Carrigan & Hayden Co., Huntington & Hopkins Co., known now as Miller, Sloss & Scott, and the firm of Baker & Hamilton, whose name has never been changed, and whom I have the pleasure of representing this evening.

Naturally you would ask what was the cause of the disaster that overcame all of these houses. I can say conscientiously that I believe that each of these houses thought that they could sell "just a little cheaper than the other fellow," and in carrying out that rule they lost sight of the expenses of doing business, and before they were aware of it, they were selling goods at a profit below what it cost them to sell the goods; hence, when dull times came, and shrinkage in values, they had no accumulated profits, no reserve fund, no resources, and the result was inevitable—failure.

I am glad that the wholesale dealers of the United States are doing business to-day under a different policy. I am glad that the retail dealers have also come together to consult and abolish the abuses that have absorbed the profits of their business, and I wish to congratulate you, gentlemen, on coming together and forming an association that will undoubtedly be of great benefit to you, not only in connection with your relations with each other, but your relations with the jobbers of this city, and the manufacturers of the entire country. It is through your influence that the wholesale Hardware houses of San Francisco are strictly wholesale; that each one of these jobbing houses now becomes a supporter of the retail merchant rather than a competitor, and such relations must necessarily redound to the benefit of both classes.

Accept my assurance that the jobbers of this city wish your association every success; will gladly co-operate with you in the carrying out of any of your plans that are expedient and equitable.

I could talk to you at much greater length, but I hope to have the pleasure of again meeting with you, and therefore do not care to exhaust all the subjects that I would like to talk over with you, and therefore shall adopt the rule of giving you my ideas in homeopathic, but frequent doses.

Thanking you very kindly for your invitation to address you and for the very kind reception which you have extended to me, I will bid you good-night.

Pennsylvania Wholesale Hardware & Supply Association.

Representative Hardwaremen from points throughout the State of Pennsylvania were in attendance at the annual convention of the Pennsylvania Wholesale Hardware & Supply Association, which was held in the Bourse on Thursday and Friday, October 24 and 25, under the auspices of the Hardware Merchants' and Manufacturers' Association of Philadelphia.

Questions of interest to the trade of the State will be taken up and thoroughly discussed by the delegates who represent the Hardware industry of Reading, Scranton, Allentown, Wilkesbarre, Hazleton, Pottsville, Lebanon, Kingston, York, Danville, Lewisburg, Easton and Ashland.

The Pennsylvania association was organized in March, 1901, by T. James Fernley, of Philadelphia, secretary of the National Hardware Association, and secretary and treasurer of the local organization. At present it has thirty-five members. The officers are: President, J. M. Kemmerer, of Scranton; first vice-president, George Bard, of Reading; second vice-president, A. J. Roat, of Kingston; secretary-treasurer, H. V. Raub, of Lancaster.

The programme of the convention was as follows: On Thursday, October, 24, at 1 o'clock, luncheon will be prepared for the visiting delegates by the Philadelphia Association, in the Bourse. At 3 P. M., the association will go into executive session. At 7 P. M., a smoker and entertainment will be held in honor of the delegates.

On Friday, October 25, the delegates will be conducted through the various industrial establishments in the city, including the Disston Saw Works, the Plumb Tool Works, and the Miller Lock Co., of Frankford; the Enterprise Mfg. Co., of Philadelphia, and the File Factory of Hugh Mc-Caffrey & Co. At 3 P. M. the delegates will take luncheon at the Manufacturers' Club.

The officers of the Philadelphia Hardware Merchants' and Manufacturers' Association are: President, Hugh McCaffrey; vice-president, William C. Peters; secretary-treasurer, T. James Fernley.

The Roofing, Cornice and Skylight Manual.

David Williams Co., 232-238 William Street, New York, have recently issued a volume that is worthy of a large circulation among the stove and tinware dealers among our subscribers. It is entitled "The Roofing, Cornice and Skylight Manual." and is designed as a shop companion as well as a reference book and guide to young mechanics who are following any or all of these branches of work. In this work are presented three articles on as many subjects, viz.: Tin Roofing, Cornice Work and Skylight Construction, the book being prepared to comprehend all three branches of work, both on account of their close relationship and of a lack of reliable literature on these several subjects. The article on Roofing, which was prepared especially for this book by an expert mechanic, gives plain directions for laying flat and standard seam roofing. In addition to this, a table is given which will be found exceedingly useful to many, enabling them to estimate the quantity of tin required for roofs of any size. The second section of the volume is given to an article entitled, "The Country Cornice Shop." This forms an extended treatise on cornice making and equipment, well adapted for country shops, and is compiled from the columns of The Metal Worker, having been published serially in that The third and concluding section of the book, pages 141 to 172, consists of two articles on Skylight Design and Construction, which were originally the first and second prize essays of a competitive series of articles on this branch of mechanical work originally published in The Metal These articles are of an exceptionally complete Worker. and valuable character, and as the book as a whole is freely

illustrated with diagrams and folding plates, its utility to tinsmiths and cornice-makers is unquestionable. The price of the book is \$1.50, at which price it may be ordered from *Hardware* or direct from the publishers.

New Corn Harvester.

A corn harvester, for which great things are claimed, has been invented and put on the market by David Binns, of Camp Chase, O. Some idea of the device may be obtained when we say 100 hills have been cut, tied and finished in one minute and a half. The machine is drawn by two or three horses hitched tandem and walking between any two rows of corn. As the machine advances the corn stalks on either side are caught by the prongs and fed back to the knives which are all the time in rapid motion. When the stalk is cut it is carried back by machinery to a moving platform where it is tied with other stalks and properly disposed of for shocking. Manufacturers of farm implements have examined the harvester and pronounced it good.

Don't Hold Another Man's Letters.

Those of us who are so unfortunate as to have names not out of the ordinary have suffered from the annoyance of having our letters delivered to persons bearing similar names; and often letters intended for one firm are delivered to another having a name nearly in common.

As a rule, it is the carelessness of a clerk which is responsible for the delay in the letter reaching its proper destination, but sometimes the delay is intentional. No matter what the cause, a precedent is established in the case of Cohen vs. Cohen recently decided by the Texas Court of Civil Appeals for recovering damages for delay on the part of the receiver of an erroneously delivered letter in its transmission to the party for whom it is intended.

A certain A. Cohen, of San Antonio, Tex., should have received a letter addressed to him referring to the sale of some real estate at Houston. Another A. Cohen got the letter and was the cause of several days' delay in having it reach the proper addressee, who in the meantime lost an opportunity to sell his property.

He thereupon brought a suit against the wrong A. Cohen, winning his case in the lower court, which judgment was affirmed on appeal, on the ground that under section 3892 of the Revised Statutes the appellant owed a duty to the appellee not to obstruct his mail, and that by failing promptly to return the letter he had violated that duty and was liable for the damages approximately resulting therefrom.—The Credit Man

American Bicycle Co.

It has been officially announced that the directors of the American Bicycle Co. have resolved to recommend to the stockholders a reduction in the authorized capital stock of the company, amounting to \$80,000,000, to \$26,996,400. Of the authorized capital stock, something like \$300,000,000 has been issued. About \$3,000,000 is held in the treasury.

Vice-President Pope stated that the scheme was to reduce the authorized capital to the actual stock outstanding, which amounts to nearly \$27,000,000. A special meeting of the stockholders will be held on Oct. 30 to act upon the resolution. All the large shareholders have already signified their willingness to vote in favor of the reduction.

Dumleigh—I should like to know what Synnex meant this morning?

Littleton-What was it he said?

Dumleigh—I happened to say I didn't tell all I know, and he said he should think it impossible for me to tell any part of it.—Boston Transcript.

CONSULAR COMMERCIAL COMMENTS.

CORUNDUM DEPOSITS OF CANADA.

Consul-General Bittinger, of Montreal, sends the following:

Corundum is an article of great use in the industrial world, for its very high abrasive powers, being used instead of emery as a grinding material. Emery is, in fact, but an impure and, consequently, much inferior grade of corundum.

Corundum, until recently, was very little used, as the expense of its mining and its rarity kept its price too high for general use. But the deposits in Ontario are of such value and are so easily worked that it is expected it will henceforth be placed on the market at a more reasonable price. Corundum is a compound of aluminum, and is of the same material as the sapphire and ruby, merely lacking their brilliant colors.

The Ontario deposits lie north of Kingston, and cover a large area. The corundum occurs along with mica and other substances. It is tamped up into powder and separated from the rest of the rock by washing, its weight being much greater than that of the other constituents of the rock. The deposits have only recently been discovered, and are as yet almost undeveloped.

A company is starting to work some of the deposits purchased from the government. The specimens so far tested have proven rich, and the extent of the deposits is probably quite large, though that has not been thoroughly investigated. There is no impediment in the development of these mines at present. They are easily worked, rich in the mineral, and conveniently situated, so that transportation will be cheap.

With the discovery of the corundum deposits in such pure condition has arisen the somewhat vague hope that its more precious relations, the ruby and the sapphire, might also be found in the same region, and this has led to considerable investigation. In some places corundum has been found which shows plainly the blue line of the sapphire, but as yet no real gems have been discovered.

Corundum of a very high grade—viz., 95 per cent. pure—is now being produced at Combernere by the Canada Corundum Co. When it is remembered that manufacturers have heretofore been satisfied with an 80 per cent. product, the outlook for the Canadian industry seems bright.

The Canadian deposit is found in the Appalachian Mountain range, which runs through the eastern townships of Quebec, and as the rock formation is the same as in North Carolina, there is every reason to believe that corundum exists there also.

DETONATING DEVICE IN FRANCE.

M. Aubert, a local inventor, has produced a successful apparatus for exploding dynamite with safety in coal mines where gas is present in dangerous volume, without the use of electricity, the installation of which is always costly and subject to disarrangement.

The instrument seems to cover the exposed end of the safety fuse, to fire it, and to receive all flame and sparks thrown off without allowing any communication with the atmosphere.

A copper tube receives the end of the fuse to a depth of several inches. At the other end of the tube is fixed a percussion cap, similar to those used in toy pistols and lying against the side of the tube, which is pierced in its turn by a small hole. The distance between the extending end of the fuse and the percussion cap is only 2 millimeters (0.07 inch). The end of the tube with the percussion cap is introduced

into another cylinder, also of copper, which contains the firing mechanism. To operate the apparatus, the tube containing the fuse is held in the left hand while with the palm of the right a smart blow is truck on the bottom of the percutient, when the cap explodes.

The gas produced by the fuse fills the cylinder, but cannot escape outside, unless extinguished, as the holes in the cylinder are covered with metallic gauze. In practice, the tubes are prepared outside, in the daytime, by the lampeleaner, so that no stray percussion caps may be brought into the mine.

Each foreman whose business it is to supervise the blasting takes into the mine a case containing the number of tubes required for the day, and brings them back at night to be recharged.

This simple apparatus has been in use for the last few months in one of the St. Etienne mines, as well as in the north of France. It is reported to be giving much satisfaction, being both economical and sure in its working.

HILARY S. BRUNOT,

St. Etienne, September 25, 1901.

Consul

ENGLISH CONTROL OF RUSSIAN INDUSTRIES.

Consul Mahin reports from Reichenberg, August 8, 1901: English companies are taking a very important part in the management of Russian industries. According to a late Russian publication, forty-five different British corporations are thus engaged, mainly in southern Russia. Of these, sixteen operate in the petroleum industry, eight in coal, iron and steel production, twelve are developing mines yielding metals and precious stones, while the remaining nine are engaged in textile industries, bicycle making, and constructing waterworks and mills of different kinds.

Ashland Emery and Corundum Co.

With the formation of the Ashland Emery and Corundum Co. recently, the affiliation of the emery manufacturing interests of the United States was completed. There are only three large emery manufacturers in the United States, and, while no trust or parent corporation has been formed, the production of the commercial emery is practically under control of one body.

In the new Ashland company there are representatives of the other concerns, and the Ashland mills, which are located in Perth Amboy, N. J., have an interest in them also. The capital stock of the local corporation is \$3,000,000. The plant in Perth Amboy is extremely valuable, being the largest in the United States. It was moved there twenty-five years ago from Ashland, Mass.

The ore used is mostly mined in Turkey, Asia Minor. It is brought to New York as ballast in ships sailing from Mediterranean ports, and then reaches Perth Amboy on lighters. There are about 2,000 tons of the raw material now on hand here and the mill is being worked to its full capacity.

Cooke—It's surprising how unpractical some men are. Brooke—Why, how's that?

Cooke—Well, there's Prof. Linguist, for example. He spent the best part of his life in acquiring fluency in nine or ten different languages, and then went and married a wife who never gives him a chance to get a word in edgeways.—Tit-Rits.

Stowell Mfg. & Foundry Co., So. Milwaukee, Wis.
Van Wagener Co., Cleveland, Ohio. Van Wagoner Co., Cleveland, Ohio. Withington & Cooley Mfg. Co., Jackson, Mich. Wabash Screen Door Co., Chicago, Ill. Wilcox Mfg. Co., Aurora, Ill.

COMMITTEE OF MEMBERSHIP.

The Committee on Membership, to whom the eligibility of applicants for membership will be referred, is constituted as follows:

William H. Hays, Iron City Tool Works, Pittsburgh, Pa. George O. Hart, Stanley Works, New Britain, Conn. Arthur B. Clarke, Old Dominion Iron & Nail Works Co., Richmond, Pa.

Edward Ingalls, Atha Tool Co., Newark, N. J.

Thomas Almgill, G. & H. Barnett Co., Philadelphia, Pa. D. W. Simpson, Wilcox Mfg. Co., Aurora, Ill.

Edward Kemp, Wabash Screen Door Co., Rhinelander, Wis.

F. E. Buckwell, Cleveland Twist Drill Co., Cleveland, Ohio. W. H. Withington, Withington & Cooley Mfg. Co., Jackson, Mich.

We take pleasure in presenting herewith the full report of the address made to the meeting by Fayette R. Plumb when he was installed as the first president of the American Hardware Manufacturers' Association, at its organization.

ADDRESS OF FAYETTE R. PLUMB.

I desire to thank each one of you personally for the great honor conferred in selecting me as the first president of the American Hardware Manufacturers' Association. While I greatly appreciate the compliment extended, I am fully aware of the grave responsibilities it entails; but feel greatly encouraged when I review the names of the Executive Committee, as I know the work of organization will be entrusted to able hands.

There are three points that present themselves to my mind at the present time that deserve your consideration:

First. Cash Discount. Second. Contracts. Third. Special Brands.

THE CASH DISCOUNTS.

The cash discounts were conceded by nearly all the manufacturers in their desire to meet the wishes of the jobbers; but it should be understood that when terms of 60 days or 2 per cent. cash, 10 days, are granted that the bills should be paid in ten days and not in twenty or thirty. It is customary, however, for some to take their own time while others have demanded that they be allowed to settle their account on the tenth of the next month following purchases, thus securing thirty days for settlement. Therefore, by conceding the 2 per cent. under these conditions, we are allowing nearly 2 per cent. per month for money which we all recognize as a high rate of interest. There was a time not long distant when all the steel manufacturers granted us a cash discount of 3 per cent., but owing to improved conditions and the consolidating of interests, they have thought it wise to make their terms 30 days net. It, therefore, makes it doubly hard for us when our terms are not complied with.

THE QUESTION OF CONTRACTS.

Coming now to the question of contracts, I wish again to refer to the steel manufacturers who not only know how to make contracts, but insist on their observance. These contracts state distinctly the terms, price, time of delivery and quantity, and if the manufacturer who makes a contract studies his own interest, he will soon know that it is to his advantage to comply with all the conditions mentioned in the agreement. On the other hand, we are confronted with the fact that a contract made with a jobber means nothing but his protection. If the price declines or another manufacturer makes a lower quotation or the demand falls off or he thinks it is inconvenient to take the goods, he simply cancels the order and the manufacturer has no redress. I do not wish to infer that this condition has been brought about by the jobbers alone; on the contrary, the manufacturer must shoulder part of it. Owing largely to the loose methods of doing business, pursued by nearly all makers, one will endeavor to outstrip another by offering additional inducements.

IN REGARD TO SPECIAL BRANDS.

In referring to special brands, I wish to impress upon you the fact that a few years ago it was the exception for any of our jobbing friends to ask for brands other than those mentioned in the manufacturers' catalogues; but now the demand seems to be increasing steadily, especially since the organization of the National Hardware Association, and if this demand continues, manufacturers' brands will soon be eliminated from the market and in a few years those who have worked a life time to build up a business, will lose their identity and brands that have become famous because of quality and finish will be unknown.

quality and finish will be unknown.

I have taken the liberty of presenting these three points for your consideration and hope you will come prepared to

discuss them at our next meeting.

Our organization, formed here to-day, must be harmonious to be successful. The formation of cliques referred to by one of the gentlemen during the discussion this morning, would be disastrous to any organization.

SUCCESS IS ASSURED.

If the National Hardware Association can be made a success, I believe the Hardware manufacturers are capable of competing and maintaining a similar organization. I am, therefore, perfectly safe in predicting a bright and prosperous future for the American Hardware Manufacturers' Association.

Before taking my seat, I must again thank you for the compliment paid me and shall endeavor by strict attention to duty to merit your confidence and esteem.

The address met with the marked approval of the gentlemen present, being received with fervent applause and every token of appreciation.

Gray & Dudley Hardware Co's. Anniversary.

Nashville, Tenn., has the distinction of having one of the largest and most complete Hardware stores in the world. The mammoth establishment referred to is the one conducted by the Gray & Dudley Hardware Co. This company has just reached a triumphal close of its first year in its new building on College and Market Streets and has just been celebrating the first anniversary of the event.

The Gray & Dudley Hardware Co. was organized six years ago by a consolidation of Gray, Fall & Co. and Dudley Bros. & Black, two of Nashville's oldest and strongest Hardware firms. The officers of the company are R. M. Dudley, president; John M. Gray, vice-president; R. H. Dudley, Jr., secretary, and J. T. Jenkins, treasurer.

COL. R. M. DUDLEY, OF GRAY & DUDLEY HARDWARE CO., AND EXECUTIVE COMMITTEE, N. H. A.

One year and a half ago the company began the erection of the largest store ever built in Nashville, and the building was completed in six months. It is seven stories in height and fronts seventy-five feet on Market Street and fifty-five feet on College Street. The length of the building is 226 feet. On the day of the formal opening one year ago, the building was visited by over 40,000 people.

The retail department is on the first floor of the building and the wholesale departments are on the other floors. There are fourteen separate departments, and the fixtures are said to be the most costly of any building of the kind in the United States. There are 300 employees in the building, and the company has thirty-five traveling men representing it in all of the Southern States. The company operates its own system of telephones in the building, having forty telephones and employing an operator.

This company has introduced many innovations unknown to many of the other large Hardware stores of the country. They keep employed a man whose only work is to dress and decorate the windows, and the beautiful displays show that the decorator is an adept artist. Another man is employed to write the advertisements of the firm for the daily papers.

The store is beautifully decorated with natural and artificial palms, and Southern smilax has been placed on the columns reaching the ceiling. With the handsome displays in the different departments, the store presents a beautiful scene. During the anniversary celebration the company made reduced prices for its customers. Ten thousand souvenir spoons were purchased by the company to be given to customers and friends.

During the celebration the company had band concerts in the afternoons between 4 and 6 o'clock by its own band. The concert and the attractive beauty of the store was drawing many people throughout the day, and many visitors came on the day following.

This company also has a saddle and harness factory, occupying the five-story building on Market Street adjoining the Hardware store, and it operates a trunk factory and handle factory in other parts of the city. These factories also do an immense business.

National Association of Credit Men.

Under the new rule, each of the standing committees of the N. A. C. M. consists of one hundred and fifty members, five being appointed by each local branch. Only the chairman is appointed by the president of the national body. Chairmen for the year 1901-2 are as follows:

Business Literature—Malcolm Graham, Jr., F. O. Pierce Co., New York.

Membership-J. Harry Tregoe, Carroll, Adams & Co., Baltimore, Md.

Credit Department Methods—F. H. McAdow, Staver Carriage Co., Chicago, Ill.

Investigation and Prosecution—Daniel B. Murphy, Burke, Fitz Simons, Home & Co., Rochester, N. Y.

Legislative—C. S. Foster, Louisiana Tobacco Co., Limited, New Orleans, La.

Improvement of Mercantile Agency Service—C. B. Nordeman, J. M. Robinson, Norton & Co., Louisville, Ky.

Lancaster Machine and Knife Works.

Lancaster, N. Y., has been highly honored through the awarding of prizes at the Exposition, as the Lancaster Machine & Knife Works have been awarded the gold medal on their entire line of machine knives and a silver medal on their line of bit braces, being the highest award on similar lines of mechanics' tools.

The progress and growth of the above concern has been remarkable, having started but seven years ago, and in the face of the keenest of competition they have built up a vast trade throughout the world on their goods. This concern makes a specialty of knives for all kinds of wood-working establishments, such as veneer, barrel, stave and hoop, planing, excelsior, etc., etc., and on paper mill work their trade is very heavy, turning out all kinds of chipper, barker, rag, paper trimmers, etc., etc., also a great variety of special knives, together with tobacco, meat cutting, leather cutting, etc. The award on knives covers their full line.

Three years ago they added to their line bit braces, and in this they have been equally successful, as their goods have not only a large sale through this country and Canada, but are shipped in large quantities to almost every country on the globe.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interests to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

HARDWARE PATENTS EXPIRED OOT. 7, 1901.

306,052. Bench-Clamp, J. Birch, Dayton, O., assignor of one-half to W. E. Sparks, same place.

306,066. ROLLER-SKATE, J. A. Dodge, Somerville, Mass.

306,079. Door-Hanger, E. N. Hutchins, Lawrence, Mass., assignor by mesne assignments to himself and W. H. Hutchinson, same place.

306,093. Can for Ashes, Garbage, etc., T. W. McKeever, Brooklyn, N. Y.

306,096. SCREW-DRIVER, C. H. Olson, Decatur, Ill.

306,191. Tool-Head Eye, H. H. Trenor, New York, N. Y.

306,192. Tool-Head Eye, H. H. Trenor, New York, N. Y.

306,203. Bench-Stop, John Adams, Hancock, N. Y.

HARDWARE PATENTS ISSUED OCT. 8, 1901.

683,931. VISE, J. Goodrich, Chicago, Ill.

683,972. Liquid Door Check, J. Nordqvist, Stockholm,

and P. E. Nordqvist, Sundbyberg, Sweden.

684,000. Door Securer, A. L. Shore, Minneapolis, Minn.

684,015. PARALLEL PLIER NIPPERS, H. G. Weibezahl, New York, N. Y.

684,017. SASH LOCK AND FASTENER, S. G. Wellman, Corry, Pa.

684,082. Combination Lock, W. E. H. Morse and O. H. Bemis, Algona, Iowa.

PATENTS EXPIRED OCT. 14, 1901.

306,376. RATCHET-DRILL, W. J. Armstrong, Indianapolis, Ind., assignor of one-half to J. A. Wilson, Nashville, Tenn.

806,400. FASTENER FOR DOOR KNOBS, A. D. Hoffman, Chicago, Ill., assignor to G. G. Calkins, same place.

306,439. WRENCH, B. F. Stockford, Sturgis, Mich.

306,480. SASH FASTENER, B. J. Goldsmith, Saratoga Springs, N. Y.

806,491. Screw Driver, G. W. Jackman, Littleton, N. H.

306,507. Plane, C. A. Meekins, Pine Meadow, Conn.

806,539. Combination Tool Holder, O. B. Shine, Covert, Mich.

PATENTS ISSUED OCT. 15, 1901.

684,405. CLOSING ABOVE SLIDING DOOR, A. and M. C. J. Bille, Spokane, Wash.

684,443. Vise, J. R. Long, Akron, Ohio.

684,722. Brace for Auger Bits and Augers, E. S. Rose, Stockbridge, Mich.

A New Self-Locking Bolt and Nut.

H. Clay Jordan, of Seattle, Wash., has received a patent for a nut lock and bolt, which is said to be a departure from previous methods of making bolts. It is exceedingly simple and the cost of manufacture is said to be less than that of the ordinary bolt and nut.

Its ingenious feature is in the use of a spring washer which is also the lock, and on the outer surface of which is a lug located at the end of a spring tongue. The nut is supplied with grooves into which the lug engages, thus holding the nut immovable even though the machinery, or whatever it is an attachment of, may endure constant vibration. While it is claimed that the nut is securely locked, it requires nothing more than an ordinary wrench to remove it.

It is applicable to any kind of work in which bolts and nuts are used. On marine engines where there is constant jar they are especially applicable, and will also be useful on rail joints, saving the work of the trackwalker.

A company has been organized in Seattle for the manufacture of the new device with a capital stock of \$200,000. George N. Gilson is president of the new concern; H. Clay Jordan, the inventor, is vice-president and general manager;

George B. Cole is treasurer, and W. Pope Jordan is secretary.

The company has not yet decided upon a site. It is expected that by the middle of next Summer the factory will employ about 300 men. It is stated that a number of orders for the device have already been received, to be filled as soon as the factory begins operation.

Invented for the Barber's use.

Heretofore it has been customary for a barber when cutting hair to first use a comb in bringing the hair to an upright position, then grasping the hair between the first and second fingers of the left hand, disposing of the comb in one hand or the other, and finally cutting off the tops of the hairs held In this operation, obviously, considerable in the fingers. time is lost in transferring the comb from one hand to the other each time the scissors are brought into action, inasmuch as the comb and scissors are alternately used in the process. The object of a new invention is to provide a pair of scissors with a comb attached to stand in a position most convenient for use in lifting the hair, without being in the way while the shears are cutting it. Thus, there is no necessity for transferring the two implements from one hand to the other during the operation. The patent on this device has been granted to Joseph Sansome, of Des Moines, Ia.

The Mending of Pocket Knives.

A man of an inquiring turn, says a writer in the New York Sun, who had read on the front of a cutler's shop the sign "Pocket Knives Rebladed and Rehandled," and who recalled the fact that, when he was a boy, he used to get a new blade put in sometimes when he broke one out of his knife, found, upon inquiry, that boys still get new blades put in knives just as they used to, but that, as a matter of fact, the people who have pocket knives repaired are mostly older persons, and that the knives are likely to be valued for their associations.

"I've carried that knife for fifty years," says one gentleman, and he hands over a knife that he's carried since he was a boy, and that he'd hate to lose.

Many knives brought in for repairs are prized because they are gifts; or they were bought in some foreign country, or they just suit the hand of the man that uses them. There are various more or less sentimental reasons why a man may prefer to keep the old knife rather than discard it for a new one. Then it may be that in some other cases, the knife is too valuable to be thrown away. So that first and last and for one reason and another out of the vast number of pocket knives carried a good many come in to be mended.

The repairs made to pocket knives are of a varied character. They may consist, for example, in the putting on of one new pearl side on a pearl-handled knife to replace a side cracked or flawed. With long use the blade at the hinged end or the spring in the handle or the rivet by which the blade is held may get worn so that the knife blade won't close properly, or may be the spring is no longer as it should be, flush with the back of the knife. In fact, a great many things can happen to a pocket knife and of course the more blades the more things can happen, but the cutler repairs them all.

The phrase "rebladed and rehandled" suggested, of course, the idea of a complete renewal, and the inquirer wondered if it might not be possible that with the repair of a knife in one part and another such a renewal might occur. And the cutler said that not only was it possible, but that sometimes it actually did happen that with successive renewals of its various parts the whole knife came sometimes to be entirely renewed, and nothing was left of the original knife.

Justice—Will you swear that you saw the accused smoking a cigarette?

Witness—I don't swear, your Honor, but I'll bet you \$10 to \$5 that he was.—Ex.

CHARLES CONTROLLES CON

CONTROLLE C

RECENT TRADE PUBLICATIONS.

Iowa Farming Tool Co., Fort Madison, Iowa, are distributing to the trade a leaflet on Walk Cleaning Tools, embracing in its contents the Star Socket Cleaner, Star Shank Cleaner, the "Iowa" Ice Chisel and a Walk and Street Scraper, which form a portion of their popular Winter products. In common with all the stationery emanating from the advertising department of this company, this leaflet is gotten up in as tasteful and handsome a style as anything of the kind we have had brought to our attention. The illustrations are fine half tones, printed on coated paper in two colors in excellent style, and represent a class of literature which, when reaching the dealer, is rarely thrown away. In connection with the leaflet they are circulating a card printed in three colors showing the Side-Walk Cleaner which is made in socket and shank patterns, being all steel in its construction. This is a class of goods that dealers at the present time are making preparations to order in anticipation of wants a month off.

MERCHANT & Co., Philadelphia, have recently issued a very important catalogue of 140 pages, intended for metal workers, machinists, foundries, ship, car and engine builders, electrical workers, Hardware and stove dealers and plumbers, it being filled throughout with supplies needed by each of these several branches of trade. It is rare that more information is given in such compact form and so completely illustrated. In addition to the illustrations showing the various articles that are catalogued, a number of full-page half tones are incorporated in its contents, showing the general and private offices of Merchant & Co., the boxing and shipping of tin plate department; also illustrations showing some of the processes of manufacturing the same, which include in their scope one of the assorting rooms, view in the black plate department, and another view showing the pickling room in which black sheets are prepared for tinning purposes. Nearly a score of these full-page half tones are given, all of which are excellent, not only in the instruction they give covering the several lines, but also as indicating the large area covered by the products made and controlled by this well-known company, the frontispiece to the catalogue giving a bird's-eye view of the plant to which the several illustrations referred to apply. This is a catalogue that it behooves each of our readers to write for, as a great deal of technical information is conveyed as well as the enumeration and description of articles dealt in. Among the leading lines controlled by Merchant & Co., may be mentioned High Grade Roofing Plates, Extra Quality Bright Plates, Solders, Babbitt, Newspaper and Mixed Metals, "Star" Ventilators, "Gothic" Shingles and Metal "Spanish" Tiles. They are also controllers and managers of the International Sprinkler Co.

F. E. Myers & Bro., Ashland, Ohio. Pamphlet catalogue of Spray Pumps, showing the numerous styles manufactured by them, covering every possible requirement; also a catalogue of their Haying Appliances, of which they are large manufacturers, including Combination Carriers, Single Rail and Double Lock Reversible Hay Carriers, Iron Track or Cable Hay Carriers, Sling Pulleys, etc. Circulars are included in the outfit, showing their "Stayon" Flexible Door Hangers, which have already been commented on in this paper, and their Well and House Pumps. All these circulars are printed in colors, in attractive style, the brass parts being indicated by a bronze printing, and consequently of considerable interest to the trade.

Torrent Pump and Fence Co., Cleveland, Ohio. Pamphlet catalogue of 36 pages, covering their important line of Torrent Purifying Pumps, together with Chain Pumps, Torrent Water Drawer, Roberts Water Drawer, Suction Pumps, Pitcher Spout and House Force Pumps, Lift Pumps and Single-Acting Force Pumps. Included in the contents are the Peerless Continuous Flow, Double-Acting Well Force Pumps. The catalogue also embraces in its contents the Rogers Patent Fence Machine manufactured by this company, which has achieved a popular success wherever introduced, and the many styles of fence which can be constructed by its aid are fully illustrated, together with many testimonials from parties who have purchased their various products and have found them in every respect fully up to date.

BOSTON & LOCKPORT BLOCK Co., Boston, Mass., are distributing to their friends and customers in booklet form the last speech of President McKinley, delivered at the Pan American Exposition, September 5th.

R. E. DIETZ Co., 60 Laight Street, New York. Pamphlet catalogue of 64 pages, covering the line of Dietz Tubular Lanterns, Street Lamps, Driving Lamps, Automobile Lamps, Bicycle Lamps, Locomotive Head Lights, Commercial, Railroad and other Lanterns, which have for a number of years formed the important product of this well-known company, one of the oldest in the lantern business, having been established in 1840. The extent of their facilities for manufacturing is indicated by the frontispiece to this catalogue, showing their factory in this city, with a frontage of 200 feet and nine stories and basement in extent. All their large and innumerable assortment of lanterns is fully shown and tastily illustrated in a manner that would make their utility clear to any one, covering every possible want in the lantern department. They are thoroughly up-to-date goods, and no dealer handling lanterns should be without a copy of this important publication. Included in the contents of the catalogue are shown a number of styles of Railroad Lanterns, Conductors' Lanterns and similar lanterns not invariably made by lantern manufacturers engaged in making more popular lines. Altogether it forms a most complete assortment. In connection with the above the Dietz Co. publish a separate catalogue of Signal Lamps very attractively gotten up, presenting their new Steel Engine, Classification, Coach Marker and Switch Lamps, which they claim are the strongest, most compact and thoroughly up-to-date lamps of this kind made. They are constructed on scientific principles, having a new patented device for changing the colors. The Marker Lamps are fitted with three or four lenses as required; the Switch Lamps are made with two styles of bottoms, either open spider or solid. Altogether it is a catalogue illustrating a line not frequently brought before the trads. It should be in the possession of every up-to-date dealer.

TROY NICKEL WORKS, Albany, N. Y., are mailing to their friends and customers in a very novel and attractive form the last public address of President McKinley, which was delivered at the Pan American Exposition on September 5th. This is presented with the compliments of the company, and is a very attractive form of distributing what is undoubtedly a representative speech of our lamented President on a subject that he was thoroughly conversant with, and to which he gave a great portion of his later life in elaborating and bringing to a state of perfection.

Fishing Tackle Specialties.

The Enterprise Mfg. Co., Akron, Ohio, who have been engaged in the manufacture of fishing tackle specialties for nearly a quarter of a century, have recently become interested in the manufacture of fishing reels on a large scale, and

rivers

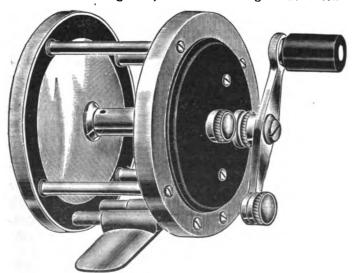

PFLUEGER'S KENTUCKY REEL. 60 YARDS.

have purchased new dies and tools of the latest designs and greatest efficiency. They have secured the services of the most expert workmen in this particular line, and are now putting out all the popular styles and sizes of reels in brass, nickel, German silver and hard rubber, suitable for fresh and salt water. These are supplied to the trade at extremely moderate prices, in sizes to contain the following lengths of line: 40, 60, 80, 100, 150, 200, 250, 300, 350 yards.

A selection of a few of the most practicable reels of their manufacture includes the following:

Pflueger's Kentucky reel. This takes 60 yards of line. It is made of hard drawn German silver, and the stubs of steel, with tempered click spring, ratchet and tongue.

Pflueger's Salt-water reel. This reel holds 300 yards and is built to hold large fish, with extra strength. It is con-

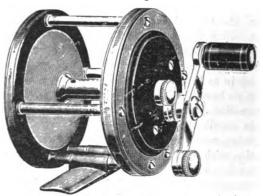

SALT WATER REEL. 300 YARDS.

structed with rubber of extra strength, and the makers claim that it will last a life-time.

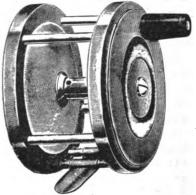

Black Bass reel. This reel takes 80 yards of line, multiplies quadruple and is made of extra fine hard rubber, metal bound full steel pivot, with click.

Salmon reel. This holds 300 yards of ordinary salmon line, such as is used on the Restigouche and other salmon

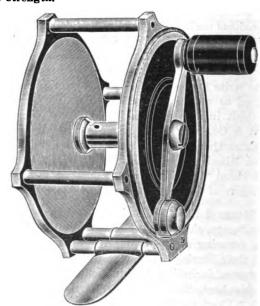

BLACK BASS REEL. 80 YARDS.

rivers. It is one of the finest reels in the market, and one of the simplest. The tongue and ratchet are steel, oil tem-

SALMON REEL. 300 YARDS.

pered, and the reel itself is of German silver and nickel. All the parts are accurately fitted and put together with neatness and for strength.

THE SPECIAL REEL. 100 YARDS.

No. 275. The Special reel. This reel holds 100 yards. It is of fine German silver inlaid in hard rubber, and is one of the handsomest and best finished reels on the market. It is hand-made throughout, with steel hardened spring, and tempered tongue and ratchet.

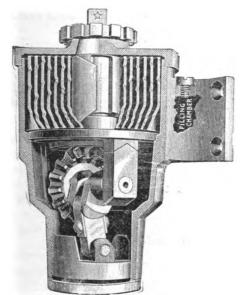

The Ogden Liquid Door Check and Spring.

The Ogden Mfg. Co., Newark, N. J., are largely extending the sale of the Ogden Liquid Door Check and Spring, of which we give illustrations in the course of this article. One of the greatest features of this Door Check and Spring is the automatic regulating valve on the inside of the check which regulates and fully controls the action of the check and the movement of the door at all times and under all conditions, entirely doing away with the small regulating screws. Once

OGDEN LIQUID DOOR CHECK AND SPRING.

put the check on the door and apply the spring power, and the actual work is done; the automatic regulator in the piston does the rest. Results are obtained that are entirely satisfactory; the door closes quickly, quietly and gently at all times; it is claimed if the wind blows forty miles an hour the regulator on the inside of the check closes proportionately, and the door is not affected in the least in the quickness of its travel; then when the wind is blowing against the closing of this door, the regulator remains wide open, thus giving the full benefit of the spring power to close it and not having to overcome the usual checking resistance as with the old style regulator. All the main working parts are made of the toughest steel, drop forged and case hardened.

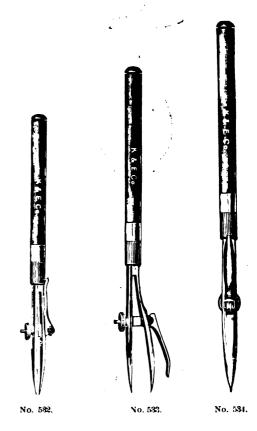

SECTIONAL VIEW.

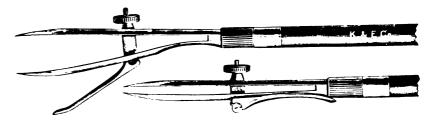

Every part is machined to a fit, and interchangeable throughout. A specially prepared non-freezing oil forms the liquid, in which all the working parts are immersed and revolve, when the check is in use, thereby assuring perfect lubrication and bringing the possibilities of wear to the smallest minimum. Another excellent feature, and one that deserves special mention, is the fact that the Ogden Check controls and checks the door during the entire swing. The appearance and simplicity of the Ogden Check shows a smooth, neat, plain cup, small, compact and powerful. A self-contained coil spring is used which is very easily removed from the case, being changed in a few minutes from right to left hand, or vice versa; simply remove the spring from the case, invert the spring and return it. The check contains the supply of liquid necessary to operate it.

Patent Paragon Drawing Pen.

Keuffel & Esser Co., 127 Fulton Street, New York, are placing before the Hardware and draughtsmen's supply trade the Patent Paragon Drawing Pen, illustrations of which we present herewith. This was recently patented, the design

being entirely new, and for the purposes specified, is claimed to possess the necessary qualifications to insure a wide distribution. In addition to the advantages possessed by pens of this description marketed by the same company, it has the advantage that it can be instantly opened for cleaning and

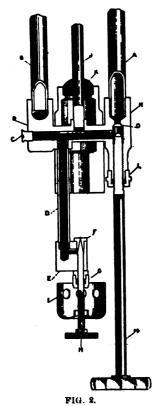

closed again without altering its original setting. It will be noticed the blades are widely separated by the spring in the upper blade, when the excenter on the angular shank of the adjusting screw is released. On re-applying it, the blades are brought to exactly their original position, and this is accomplished smoothly and without vibration. The adjusting screw is on the lower blade, which permits of changing the adjustment by simply applying one finger of the hand that may be holding the pen. They are made in three sizes: No. 532, 4½ inch ebony handle, list \$2.7 No. 533, 5 inch ebony handle, list \$2.20, and No. 534, 5½ inch ebony handle, list \$2.40. These pens are furnished with aluminum handle at an advance of 15 cents each.

Imperial Gas Lamp.

The Imperial Gas Lamp Co., 132-134 Lake Street, Chicago, are advertising an improved system of lighting stores, churches, halls, factories and even streets, parks, etc., with what is called the Imperial Lighting System for which they have patents pending, and which is claimed to produce a light equal to an electric arc at a very low cost. The indoor

light shown in connection herewith (Fig. 1) is claimed to be the outcome of many years of experiment, and is also claimed to be far superior to the electric arc, having a much softer, whiter and steadier light. The Imperial Burner used in connection therewith (Fig. 2), is referred to as possessing the smallest number of parts, having a generating chamber

a quarter inch in diameter, which is about four times the size of the ordinary generating chambers, making it practically impossible to clog. The generation is stated to be perfect whether the light is turned on full or low, as part of the generator is at all times in the centre of the flame. It possesses a needle point which regulates the supply of gas perfectly, and also cleans the small orifice of the gas passage, lessening any possibility of clogging, and insuring a good light at all times. In the system adopted by this company,

the gasoline is conveyed from a tank, an illustration of which is shown in Fig. 3, throughout the entire building through a flexible copper tube that can be put through crevices, around corners and concealed with the same facility as electric wires, and as many lights as may be desired can be supplied from the same tank. The tank may be in any convenient place, and it is claimed by the manufacturers there is absolutely no danger, as they are tested to 300 pounds pressure, while in use they are rarely subjected to a pressure exceeding

FIG. 8.

25 to 30 pounds. In the Imperial system common stove gasoline is burned, giving a 1,200 candle-power light at an expense of about ½ cent per hour. The lamps (see Fig. 4) are manufactured entirely of brass, every lamp being thoroughly tested before leaving factory. The lamps are trimmed complete, as shown in cuts, and complete instructions are sent as to installing and operating the system. The company manufacture especially for the Imperial Gas Lamp an extra strong and durable mantle, which they strongly recommend in connection with the use of their system, as the brilliance

of the light depends considerably upon the quality of the mantle, and economy in that direction would not make certain the best results in the system used.

"Why do you object to being shifted about?"

"Because," answered the New York policeman, "it impairs the efficiency of the force. No sooner do we learn whom it is safe to arrest than we are sent to some other part of the town, where we have to get acquainted all over again.—Es.

REVIEW OF THE MARKETS.

Wire Nails: The trade keeps up with an excellent demand for this important staple. The lower quotations understood as emanating from newly organized competing plants have so far had no effect in changing current quotations from the main source of supply. The American Steel and Wire Co. is reported as contemplating no immediate action, having this object in view, as they are still behind orders at the mills. Quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots	\$2.80
" less than carload lots	2.85
To retailers in carload lots	2.40
" less than carload lots	2.50

New York: The local Wire Nail market remains in same condition as noted in our previous report. The demand is a satisfactory one. Quotations are as follows:

Cut Nails: The usual demand for the season is noted in the Cut Nail market, which is enjoying a fair trade at unchanged prices for ordinary requirements. Quotations remain as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

New York: The local demand is steady and without material change, prices remaining as previously quoted:

Barb Wire: A heavy trade continues to be the feature of the Western demand for Barb Wire. The Eastern business gradually slackening is more moderate. Prices remain without change, quotations being as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in e	arload lots, Painted	\$2.60
- 44	" Galvanised	2.90
" 1	ess than carload lots. Painted	2.65
44	ess than carload lots, Painted " " " Galvanised	2.95
To retailers in	carload lots, Painted	2.70
	" "Galvanized	2.00
**	less than carload lots, Painted	
44	" " Galvanise	d. 8.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named.

Plais Wire: The mills have not yet caught up on their back orders, Plain Wire being in such steady demand for so many possible requirements. More or less competition with new plants is becoming evident, the influence of which has so far been unimportant. Quotations are without change, as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

	Rase	sizes.
	Plain.	Galv.
To jobbers in carload lots	. \$2.25	\$2.65
To jobbers in carload lots less than carload lots	. 2.80	2.70
To retailers in carlots	. 2.85	2.75
" less then carload lots		2 85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain Fence W	lre Advan	1008	(Cato	h 1	Weights) Galv	anised.

Lissecd Oil: The following quotations are the latest announced by the Dean Linseed Oil Co:

In lots of less than 5 barrels...... 66 cents per gallon. In lots of 5 barrels or more...... 65 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw. Calcutta Oil, 85 cents per gallon.

THE PHILADELPHIA TRADE.

Although it is somewhat between seasons, trade is keeping up in a satisfactory manner, and there is still much difficulty in getting some goods. Axes are at a premium, and there is great dissatisfaction on account of slow shipments—orders which were placed early last Spring being still unfilled.

The same is true of some other lines, and it will probably be some time before deliveries are fully caught up, as, owing to the recent steel strike, manufacturers are still experiencing delay in receiving supplies of material.

During the past week, Machine Bolts, Common Carriage Bolts and Coach Screws have been advancing—the factories claiming the advance absolutely necessary on account of the increased cost of material.

Rope is very much excited—the price advancing constantly, with the prospect of higher figures.

Owing to the mild October weather, the demand for cold weather and seasonable goods has scarcely started, but this may reasonably be expected to develop in a couple of weeks, and, with the present enormous purchasing power of the country, there is every indication there will be a large demand for such goods.

BIDDLE HARDWARE Co.

THE BALTIMORE TRADE.

Trade continues remarkably good, although the great rush is over, and we expect the demand will keep up until Christmas. Prices remain firm, but few changes noted, and these slight advances, barring a few items. Screws and Wire Nails appear to be, at present, on a competitive basis, with slight reduction so far.

The Shovel situation is interesting now and a good many buyers would like to know what Spring prices will be, and those favoring independent manufacturers will doubtless find themselves in the right boat. Collections are splendid.

H. W. WEBB & Sons.

THE PITTSBURGH TRADE.

October has so far been a model for good, seasonable weather and favorable business conditions. Everything conspires to make business good and it has proven equal to the conditions.

Manufacturers of sheet iron, tin plate and tubing are especially busy trying to catch up with orders accumulated during the strike in these mills, and all branches of the steel business are quite busy. The new competition coming on the market seems to find orders without much disturbance of prices, because of the active demand.

The Association of Manufacturers formed at Cleveland, which intends to meet at the same time as the Hardware Jobbers' Association each year, is an excellent move. It shows that they recognize the jobber as their natural and necessary ally in distributing new products, and that they desire closer relations with him.

The two associations can confer with each other upon matters which deeply concern both, more readily than with individuals, and we look for much good to come out of these conferences. The Hardware convention had a successful

meeting and is to be congratulated upon securing the services of R. A. Kirk, of Farwell, Ozmun, Kirk & Co., St. Paul, as president for the ensuing year.

LOGAN-GREGG HARDWARE Co. '

THE CLEVELAND TRADE.

The present condition of the Steel market is affected by the strike. The mills are busy completing orders taken early in the season, and jobbers, retailers and consumers are waiting. They are all urging delivery, and as the demand of another season is approaching, it is hardly possible that mills will complete old orders in time for this year's consumption. This condition will seem to insure lively demand for the first half of 1902.

In many lines of standard goods it is impossible for jobbers to fill orders, as manufacturers have been unable to get material and their orders have been accumulating. The prevalent feeling that goods are likely to decline is not justified by the stock of pig iron and billets, which are scarce and seem to be increasing in value. Increased competition in some lines has weakened prices where they have been abnormal. Prices on raw material indicate a very firm market.

The Hardware Convention closed its sessions and the members left with increased confidence in the value of trade organizations. New conditions of trade made new methods necessary and a consensus of opinion through organization has been of great value. The brightest and best thought is made the property of all and united action to cure defects is made possible.

The line between legal and ethical methods has always been recognized and emphasized; the interests of the manufacturer and retailer have been considered, and the Association has not asked for advantages for jobbers that infringe the rights of either.

Nineteen hundred and one has been a prosperous business year and every indication predicts a future that neither trusts nor anarchists can prevent. There is no surprise that Cuba is pleading for reciprocity, but the surprise is, that she fails to recognize the advantage of a full partnership with all our possibilities.

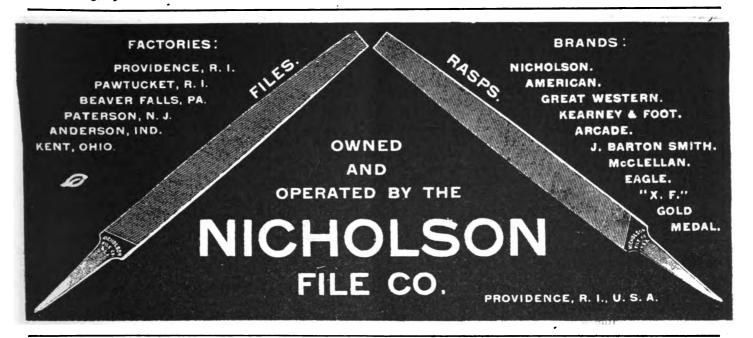

The Lockwood-Taylor Hardware Co.

THE COLUMBUS TRADE.

The weather is ideal now, and it is really too bad that any one has to stay indoors and attend to business; but such is the fate of us poor mortals who must toil for a living. Still, a worse fate would be prolonged idleness. If one could shut up shop when he felt like it, and go fishing or nutting or anything he was inclined to do and then go back and have business proceed as though no interruption had occurred, it would be very agreeable; but we all know that one must keep in the harness continually or nearly so, if he expects to succeed.

There is no cessation in the volume of business. Difficulty in getting goods promptly still continues, and we predict that in a great many lines there will be a shortage in 1902. The break in the price of scythes has stimulated trade on that line materially. Jobbers and retailers have cleaned up nearly everything they had in the shape of scythes, so the demand will be large for next season. The high price on scythes did one good thing at any rate, and that was to force dealers to look up everything they had in the shape of a scythe, whether they were unpopular styles, rusty or whatever condition, and sell them rather than buy new stock at the unreasonable prices that prevailed the past two years. The Shovel Association found outside competition too strong on some grades of shovels and reduced the price on the fourth grade hollow-back goods. If they would dispense with the services of some of their high salaried officers and cut off the dead head list, they could make a reduction all along the line and still realize more for their goods than they now do. Subsidizing a lot of factories is expensive, and it is well

known that a large number of factories that do not make a shovel, get the profit on their approximate out-put. Then add the handle factories that are also subsidized, and it is easy to see that the price they must add to shovels in addition to the legitimate cost is large. This is a big country with plenty of money, so when one factory is bought up, others spring up like mushrooms. The question is, what will be the outcome when the Association is dissolved and the market becomes an open one again? Some will have to shut up shop. Competition is sometimes disastrous, but as a rule the disruption of a combine is more so. If manufacturers would only be honest with each other, and when an agreement is made as to prices, keep them, there would be no need of combinations. All the expense of organizing and maintaining such an organization would be saved, the manufacturers would get a fair price for their product, and consumers would not be forced to pay the unnecessary expenses. It is on the principle of politics. Some promoters want jobs, and so they form trusts so offices can be created for their benefit. But the day of reckoning is sure to come as it has in the scythe and axe business. The first break has been made in the Shovel Trust and the end is in sight. Then some foolish things will be done, and after a season of famine and freeze out, they get together and overdo the thing again. Steady prices at a fair profit is better than bobbing up and down all the time. THE SMITH BROS. HARDWARE Co.

THE CHICAGO TRADE.

Our sales for the month of September, this year, not only exceeded those of the same month of last year, but our sales for the present month are greatly in excess of our most sanguine expectations. We look for a continuance of this fortunate state of affairs for some time to come, as we can see nothing in the horizon to alter it in any way. Orders for the whole line of Mechanics' Tools, as well as Builders' Hardware, have been very numerous and liberal, thus clearly showing the wonderful activity in the building line throughout the great Northwest. Reports on various conditions from all of our salesmen are of the most flattering nature, and are strongly backed up by the number of orders that they continue to pour in on us. Prices on everything all along the line remain very firm, which should be so, not only because of the scarcity that still exists of some of the more staple items, but on account of the continued advances of the various kinds of raw materials. While we have been successful in obtaining and shipping quite a lot of Plain and Barb Wire, also Sheet Steel, we are still experiencing some little trouble in getting enough from the mills to satisfy all

of our customers, who seem to insist to keep us loaded to the guards with orders for this class of goods. It has kept us quite busy to keep them all satisfied, yet, under the pressing conditions, think we have not only done fairly well, but entirely so. The great influx of orders is a good indication of the present healthy condition of the market, and to judge from appearances on all sides, a good fore-runner for months to come.

Wells & Nellegar Co.

THE DAVENPORT TRADE.

The rope market is excited, and prices are advancing rapidly. The Steel Goods Association seems to have quietly passed into history, and prices of these goods have declined accordingly.

Hardware trade in general has kept up remarkably well, but now the numerous small orders indicate a hand to mouth policy, which will doubtless prevail during the remainder of this Fall.

Continued warm and dry weather prevents large sales of Winter goods, and it is difficult getting orders for Cross Cut Saws. Axes or Skates.

Collections are improving.

SICKELS, PRESTON & NUTTING Co.

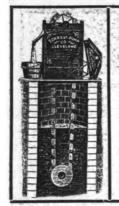

THE MINNEAPOLIS TRADE.

We have had an unusual amount of wet weather, which has been bad for threshing and flax cutting. There was enough clear, bright and suitable weather for threshing directly after the wheat harvest for those farmers who own their own threshing rig to get through. But a large part of the farmers depend upon men who make a business of going from farm to farm.

The farmers who stacked their grain during that good weather are safe, but quite a majority left it in the shocks at the time when they could have stacked, and waited to get the machine, and, of course, when wet weather came, they could neither thresh nor stack. In consequence, there will be a large amount of damaged wheat and off grades.

It is very unfortunate indeed after having raised a good, fair crop that this should happen, and naturally will have quite an effect on trade.

In spite of the conditions mentioned, we are glad to say they do not prevail all over the territory tributary to the "Twin Cities." Business is very good; everybody seems well satisfied as to volume. Jobbers are very busy, and the only complaint from retail trade is the fight that is going on here at this time, so that no one can get a margin of profit, particularly on Builders' Hardware. Ever since the writer has

If you deal in pumps, why handle the same old-style slow kind that your competitor does? It would pay you to get something up-to date, which would please your customers and take the business . . . Write for new Catalogue.

THE TORRENT PUMP & FENCE CO., CLEVELAND, O., U. S. A.

been located here there has always been some trouble in this way, but it has never been quite so bad as it is now.

The Roberts Supply Co. business has been sold with the understanding that the business is to be continued, and we presume on the same line as heretofore. This, we think, is a misfortune, not only for the local dealers, but particularly for country dealers in all branches.

W. K. Morison & Co.

THE ST. PAUL TRADE.

Our conditions are favorable for a good trade, with the exception of the northern part of Minnesota and North Dakota, where there has been an unusual amount of rain which has hindered threshing and has caused some loss, as the farmers in that section have not made it a practice to stack grain but have threshed from the shock, and when we have a great deal of rain it is impossible to do the work in the usual way. We hope that repeated visitations of this kind will result in lessons causing permanent improvement in handling wheat.

Our orders are coming in very nicely. Prices are being well maintained, collections are coming in good amounts, with a prospect of having a fairly good clear up before next year.

C. W. HACKETT HARDWARE Co.

THE OMAHA TRADE.

General conditions prevailing are on the average satisfactory, and the volume of business maintains the high water mark that has characterized it for the entire year. A noticeable scarcity still exists in some lines, notably in black and planished sheets. Tin Plate and Galvanized Iron appear to be in fair supply. Prices ordinarily are well maintained, though some little weakness is noticeable in the Eastern markets on Nails and Wire, so far as the jobbers' prices are concerned. Business would be materially improved by a little

cold weather, which would create a considerable demand for season goods, which while having been in fair demand, have not reached the distribution that would result from a spell of seasonable weather.

Collections are up to the average and no complaint is heard in this line from either the jobbing or retail trade.

RECTOR & WILHELMY Co.

THE SAN FRANCISCO TRADE.

Peace reigns. But the fact that this week the Iron Workers' Union abandoned their "striking" attitude and returned to their work as formerly is regarded as having had little or no bearing on the more interesting fact that buoyancy of spirit in the Hardware trade in these midway days of October is strongly in evidence. And another thing plain to be seen is the spirit of growing fraternity and co-operation of interests. This is being shown, not only in the boom-like movement that is causing Oakland and San Francisco Hardware retailers to "fall in" and "line up" as association members of the local dealers' co-operative society for the promotion of mutual interests and brotherly feeling, but also in the broader field embracing the whole of California, and in the still more expansive territory including the entire Pacific coast. For example, note this:

At this month's meeting of the San Francisco and Oakland Retail Hardware Dealers' Association, held a few evenings ago, Henry Gracey, proprietor of two Hardware stores in this city, as secretary of the California State Retail Hardware Association, gave the local society an interesting talk to the effect that at a meeting of the Executive Committee of the State Association, held last week in Sacramento, a plan was formulated and an organization committee appointed to traverse the State in the interest of district association of page 38.)

THE PEERLESS LIGHTING SYSTEM.

The greatest lighting machine ever introduced. Will save over 80 per cent. of cost of lighting your place of business by electricity or as. 1000 candle-power light for one-half cent per hour. Absolutely safe. No smoke. or. Turns on and off at fixtures, same as coal gas.

Make their own gas from 95 per cent. common, every day air which costs nothing and 5 per cent. gasoline at 10 cents per gallon. More brilliant than electricity and cheaper than candles. Every lamp guaranteed.

We also manufacture High Grade Roller Skates and Interchangeable Ball-Bearing, Rubber Tired, Steel Carriage Wheels, which fit any common axle.

We want live agents everywhere. Get our complete catalogue. Protection given all agents in territory allotted them.

RICHARDSON BALL BEARING SKATE CO., L. M. RICHARDSON, Pres., 156-158 Lake St., CHICAGO.

And again, in line with the local society's desire for the co-operation and good will of the wholesalers, based on the recognition that each have rights and equities which the other should respect, believing that thereby agreeable and profitable business would result to all, A. C. Rulofson, manager of the Hardware department of the wholesale house of Baker & Hamilton, was present in response to the society's invitation to Baker & Hamilton to have one of their representatives attend and address the association's meeting. A synoptical report of Mr. Rulofson's address, which was greatly appreciated by the retailers, appears on another page.

The co-operative movement on the part of the wholesale Hardware and Iron and Steel houses of the Pacific coast, rcported in this correspondence two weeks ago, is progressing. Since last report a well-attended meeting has been held at the Palace Hotel in this city, and although the expression of several wholesalers in the Puget Sound district was "furninst" the movement, on the plea of impracticability, the belief in the proposed pooling of interests on the part of the large majority was unshaken and another and focal meeting is expected soon to be called.

-INDUSTRIAL PRESS ASSOCIATION.

"Ye Olde Hardware Store."

The John E. Bassett & Co., proprietors of "Ye Olde Hardware Store," established in New Haven in 1784, supplement the celebration of "Old Yale" now under way, by publishing the following reminder:

On a page of an ancient ledger, used one hundred and seventeen years ago by our predecessors, appears the name of Reverend Ezra Stiles, at that time president of Yale College. Since Doctor Stiles' time our store has numbered among its patrons not only the presidents of Yale, but almost the entire faculty, while thousands of Yale alumni all over the world will remember the old Hardware store near State Street where they once bought their pocket knives and shaving things or were fitted to skates in the Winters of long ago. Few stores, if any, in this country can boast of so notable a patronage.

"Tempora mutantur et nos mutamur in illis," yet "Ye Olde Hardware Store" still numbers hundreds of Yale men among its valued customers. Although established over a century ago, our store has always been abreast of the times in catering to the increasing needs of the age, and we hope to merit in the future a continuance of the pleasant relations we have enjoyed with Old Yale in the past.

THE JOHN E. BASSETT & Co.

October, 1901.

A Bicycle Timepiece.

Alphonse Duhamel, of Paris, says an exchange, has made a timepiece that stands twelve feet high, and is composed entirely of bicycles or their component parts. The framework is a huge bicycle wheel, around which are arranged twelve ordinary sized wheels, all fitted with pneumatic tires. A rim within the large wheel bears the figures or the hours, the figures themselves being constructed of crank rods. The hands are made of steel tubing which is used for the framework of bicycles. The minute strokes on the dial are small nickel plated spokes. The top of the clock is an arrangement of twelve handlebars. The clock strikes the hours and the quarters, bicycle bells, of course, making the chimes. The pendulum is made of a bicycle wheel, and the pendulum rod of various parts of a bicycle frame. It is said that the clock. besides being a curiosity, is an excellent timepiece. It is to adorn one of the public buildings of Paris.

BOOKS YOU NEED IN YOUR BUSINESS.

Universal Dictionary of Weights and Measures,

Ancient and Modern, reduced to standards of the U.S. By J. H. Alexander—New Edition—Enlarged—Cloth Binding,

Link and Valve Motions Simplified,

Illustrated with 20 wood-cuts and 20 lithographic plates, together with a travel scale, and numerous useful tables. By W. S. Auchincloss—13th Edition—Revised—Cloth Bound,

The Mechanics' Friend,

A Collection of Receipts and Practical Suggestions relating to Aquaria, Bronzing, Cementa, Drawing, Dyes, Blectricity, Gilding, Glass Working, etc., etc., by W. E. A. Axon—Wood Cuts and Diagrams—Cloth, \$1.50

Hydraulic Motors, Turbines and Pressure En-

gincs For the use of Engineers, Manufacturers and Students. By G. R. Bodmer—204 Illustrations—Cloth, \$5.00

Machinists' and Steam Engineers' Practical Cal-

Culator. Useful Rules and Problems arithmetically solved, and general information applicable to Shop Tools, Mill Gearing, Pulleys and Shafts, Steam Bollers and Engines, Tables and Instructions for Screw Cutting, etc. By D. B. Dixon—Morocco.

Dictionary of Manufactures,

Mining, Machinery and the Industrial Arts—By Geo. Dodd—Cloth Binding,

Skeleton Structures

Applied to the building of Steel and Iron Bridges—By Olaus Henirci—Illustrated,

Iron Truss Bridges for Railroads,

The Method for Calculating Strains in Trusses, with a careful comparison of the most prominent trusses, in reference to economy in combination, etc. By Col. Wm. E. Merrill, U. S. A.—Illustrated.—Cloth,

Metal Turning,

By a Foreman Pattern Maker—Illustrated with 8r engravings—Cloth Binding, \$1.50

Modern Moulding and Pattern Making.

A Practical Treatise upon Pattern, Shop and Laundry Work; Embracing Moulding of Pulleys, Spur Gears, Worm Gears, Balance Wheels, etc. etc. Latest improvements in American Cupolas. Large collection of carefully selected Rules and Tables for every day use in Office, Pattern Shop and Laundry. By Joseph P. Mullin, M. E.—Hlustrated—Cloth,

Toothed Gearing,

A Practical Hand Book for Offices and Workshops by
a Foreman Pattern maker. 184 Illustrations—Cloth, \$2.25

Standard Electrical Dictionary,

A Popular Dictionary of words and terms used in the practice of electric engineering—350 Illustrations. By T. O'Connor Sloane—Cloth Bound,

Electrical Transmission of Energy,

A Manual for the Design of Electrical Circuits. By H. V. Abbots—Cloth Binding

Electric Lamps and Electric Lighting,

Being a Course of Four Lectures delivered at the Royal Institution. By Prof. J. A. Fleming—Fully Illustrated—Cloth Bound,

WILL BE SENT POST PAID ON RECEIPT OF PRICE NAMED.

We will always be glad to furnish quotations on any technical work not found in the above list-

IS IT SO?

A fire in a red glow represents 1200 degrees of heat, a draft through this carries the heat out the chimney unless intercepted by a cross tube ROCHESTER RADIATOR, when nearly all of the waste heat is conveyed into the room by the rapid circulation of air through the tubes and saved. This appeals to common sense and is verified by fhe most thorough scientific test. The ROCHESTER RADIATOR is a satisfactory article to sell and one that affords the dealer a good profit.

A Silent Partner.

A prominent business man, whose opinion is held in high repute, discussed the trade press with a writer in *Electricity* recently, and his observations are interesting and instructive.

"Trade journalism," said he, "is to the trader an index, educator, informant, teacher, profit-gatherer, counsel — in short, the prized silent partner. The trade paper is an insurance against the dishonest, tricky salesman; is the champion of the trader against unjust charges or rules, whether attempted by a railway organization or an individual; it is the advocate of organization, the mouthpiece of associations; their champion and defender—therefore, worthy of the support of every one interested in co-operative effort.

"Primarily, the trade journal is for the dealer, the man so anxious to concentrate all his energy upon his business that he seeks all aids, and is willing to pay for news or information that is calculated to push him forward to success.

"The trade journal is a tool of business. If the tool is poorly tempered, of weak constitution and untidy appearance, it will exert no influence, do more harm than good; turn traders into blunderers and live a short life. If, on the other hand, this tool of trade is well tempered, put together in attractive style, has force, a moral tone, and puts character first, it will live and thrive, and as it grows older exert more and more influence-secure respect for its opinion. The trade journal, then, to be a power, to have merit, to become the trader's tool, must be worth paying for. It must have individuality of its own, for in this world men count for more than method.

"By taking a trade paper you become an associate worker for your own and other's benefit, and thus carry out the highest ideals of conduct. You should ever keep in mind the old proverb, 'A man of knowledge increaseth in strength.'"

THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device-especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior qualityensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

The checking medium is an oil which is practically non-freezing, and which can readily be renewed when needed without removing the check from the door.

HARDWARE

At a recent meeting of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership therein:

Nathan Goff, Clarksburg, W. Va.
Malcolm H. Ormsbee, 24 Broadway, Brooklyn.
Paul B. Haviland, New York.
Julien A. Ripley, Franklin Square, New York.
Herbert J. Frost, 90 Chambers Street, New York.
Miles M. O'Brien, 237 Broadway, New York.

Indiana Mfg. Co., Jeffersonville, Ind., who are well-known as manufacturers of hollow ware and other castings, are announcing to the trade that they have just completed a factory of 100 fires capacity for the manufacture of chain. This plant is equipped with new and latest improved machinery throughout, and under the direction of experienced hands the company feel confident that the goods which they design turning out will be second to none now soliciting the patronage of the Hardware trade. They request inquiries in regard to their product and also in regard to the general requirements of any trade handling this staple line, promising prompt replies to all trade inquiries.

The H. S. Bettes Hardware Co., Paris, Tex., have placed a large order with the J. D. Warren Mfg. Co., Chicago, for the interior arrangement of their new store. In elegance, utility and taste, it may safely be said that but few other Hardware stores in the South or West will be able to boast of as fine store equipment.

The machinery of The American Arms Co., of Boston, Mass., manufacturers of single and double shotguns and revolvers, under the management of the late Geo. H. Fox, has been purchased by The Marlin Fire Arms Co., and is being moved to New Haven, Conn., to be added to the Marlin plant in that city.

The Cleveland Twist Drill Co., of Cleveland, O., announce the opening of a store at 17 South Canal Street, Chicago, where will be carried a full and complete stock of all the goods of their manufacture. This stock will doubtless be of great convenience to the trade of Chicago and vicinity and will be in charge of John G. Ladrick, who has represented them in the West for a number of years.

The Hubbell, Grier Electric Co., Bridgeport, Conn., was brganized under the laws of New York on Oct. 18. The officers are Harvey Hubbell, president; Edward R. Grier, treasurer and manager; Thomas G. Grier, Western manager and Francis E. Laimbeer, secretary. The above named are the directors of the company and the capital stock is \$25,000. The company is formed for the purpose of manufacturing the Hubbell Electrical Pull Specialties. Edward R. Grier has been associated with The Bryant Co. for the past ten years as their Western manager. The company's plant will be at Bridgeport, Conn., with a New York office at 93 Nassau Street.

The New York Aluminum Co., 142-144 Worth Street, New York, have recently purchased the stock, factory and ware-rooms of Raymond & Gottlob, formerly at 109 Fulton Street and 831 Broadway. By retaining the services of the experienced employes of that firm, and the greatly improved facilities afforded by this increased plant, they are in excellent position for the spinning, casting and stamping of aluminum specialties in the extension of which business they solicit correspondence.

The Waterman Hardware Co., Albany, N. Y., has recently been incorporated under the laws of the State of New York, with a capital of \$10,000 to transact a general retail Hardware business. George Waterman, who has for some time been the Eastern traveling representative for Tower & Lyon, will be the president and treasurer. Mr. Waterman has been actively connected with the Hardware trade during the past ten years, having been exceedingly popular on the road, and noted for his industry and ability in the conscientious discharge of the many important duties which fell to his lot. His many friends wish him every success in his new venture, having no question as to its profitable outcome.

In the paragraph in our previous issue having reference to change of location of offices and factory of the Magnolia Metal Co., we neglected to mention that the injury to the old offices would in no wise interfere with their general business, as their factory at Stirling, N. J., possesses ample facilities for taking care of their Eastern business.

Announcement is made that the New York Hardware Co. has appointed Mario Pena as manager, with offices at 54 Stone Street, New York. Their business will be confined to the exportation of all kinds of Hardware, tools, household goods and Hardware specialties. The company solicits correspondence and catalogues from manufacturers of above lines interested in establishing an export trade for their product.

The National-Acme Mfg. Co., has recently been incorporated under the laws of Ohio, with a capital of \$750,000. A valuable manufacturing site on the Pennsylvania railroad at Stanton Street, Cleveland, O., has been purchased, and contract has been let for the erection of a modern factory of brick and steel, 300 feet long by fifty feet wide, and four stories high, which will be equipped with electrical power. They have purchased the entire business, together with patents, good will, etc., of the Acme Machine Screw Co., of Hartford, Conn., and The National Mfg. Co., of Cleveland, O., assuming all contracts and obligations of whatever nature now outstanding. As early in 1902 as their new factory will be ready for occupancy, the Hartford plant will be moved to Cleveland. The business will be conducted by those who have been actively engaged in the management of the individual companies. They will manufacture for sale, the Acme Multiple Spindle Automatic Screw Machine, together with a full line of Cap Screws, Set Screws, and Special Milled Work, turned from Steel, Iron, Zinc and Brass. Their facilities will be unexcelled, and they will therefore be in position to serve their customers in a manner equal to any concern of their character in the business.

Several important changes have recently been made in the management of the Mossberg & Granville Mfg. Co., Providence. At the recent election the following gentlemen who have not heretofore been associated in the management were made directors: W. W. Orr, V. I. Cumnock, E. C. Moen, A. R.Whitney, Jr., and Joseph W. Harriman, all of New York, and Elisha H. Howard, of Providence. The board of directors organized by electing Howard C. Smith, of New York, president, Elisha H. Howard, vice-president, and E. C. Moen, secretary and treasurer. V. I. Cumnock was made chairman of the executive committee. Te resignation of W. W. Gibbs, for some time past general manager, was accepted and in his place George A. Clark, formerly of Lowell, Mass., has been appointed. The business of the company at the present time is in a flourishing condition and various new patterns of tools and machines have been added to its already very extensive catalogue. The New York office of the company, in charge of the secretary and treasurer, is at 100 William Street.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The business done by the trade during October has been favorably commented upon in every important trade centre. Prices were well sustained, slight fears for any possible decline preventing no purchases for immediate requirements. Very few lines but what hold up nobly, giving evidences of no element of weakness. The condition of the Iron and Steel markets and the larger lines of manufactures interfered with by the great strike, exerted a great influence in sustaining the markets and keeping the order books in a healthful state of independent fullness. The demands of labor in many lines of production have been entertained as to a betterment of ruling conditions and the output of more than one factory has been increased by adding to the remuneration of the skilled workmen who make early deliveries posible. This willingness to be reasonable with employes, now noticeable among manufacturers, has a tendency to keep quotations on the product of the mills affected in a stronger condition, and it is doubtful if we will see orders entered for Spring delivery on any such open contracts as to quantity and delivery as so frequently at this season of the year have to be entertained by the American manufacturer.

The weather has been so pleasant during the past fortnight the demand for winter supplies has been light in proportion in the retail trade, which in the present scarcity of a number of leading specialties which do not seem to be supplied with any degree of fullness, was very acceptable to the trade. This scarcity for leading tools, including saws, hammers, etc., indicates to a nicety the fine business which has been done in these truly Hardware lines of demand and supply.

The demand is slacking up somewhat on Builders' Hardware, which is usually anticipated in the current month. The prospect is, however, bright for a prosperous opening for this branch of business for the coming Spring. Many improvements are in contemplation which will embody in their completion a good demand for builders' supplies of every character.

The holiday season now rapidly approaching will find the trade well equipped to take care of the anticipated large demand. High grade goods and articles of merit will meet with a larger sale than has been a feature of late years, owing to the steadily remunerative employment visible on every hand.

The export trade as far as it regards the distribution of Hardware specialties and special lines abroad, shows a diminishing volume of sales compared with this time last year. The indications point to the fact that a more active market at home has prevented the pushing of sales abroad at the usual low figures which obtain under such conditions. It is too frequently the case that the foreign market is regarded by our manufacturers more in the light of a proper outlet for an over-production, or during the prevalence of a dull home market, and is less apt to be stimulated by the necessarily low bids for business, which the legitimate channels of active domestic trade, more easily approached, make undesirable. With an active home demand, prompt deliveries for foreign markets are made difficult of accomplishment. Generally speaking, we look with considerable favor on a market abroad for the salable specialties we manufacture in such large quantities, but when comparisons of profit are made by the zealous maker, he is too apt to find his dividends come from the sales made in the home market, and foreign possibilities are not then cultivated with our characteristic energy and persistence.

Comparison of Volume of Competing Commerce.

An accurate measurement of the commerce of the principal countries of the world at the present time is afforded by some figures published by the treasury bureau of statistics in the September number of the Monthly Summary of Commerce and Finance. The statement is in the form of a table showing the commerce of thirty leading countries of the world during such part of the fiscal year of each of the countries as is available from their latest official reports. Owing to the fact that the fiscal years of the countries differ in their dates of termination, the statement is in some cases for a six months' period, in other cases for eight, and in other cases for eleven or twelve months. In order to furnish a basis for comparison of the volume of the commerce of the various countries the bureau of statistics gives the average monthly import and export during the part of the fiscal year covered in the statement for each of the thirty countries in question.

This statement of the average monthly value of the imports and exports of the thirty countries furnishes a fair basis of comparison of the commerce of the countries one with another, and an opportunity to compare the imports with the exports and thus determine whether the excess, or "balance of trade," is on the import or export side.

An examination of the full list of countries shows that in two-thirds of the number the imports exceed the exports, and that in one-third of the number the exports are greater than the imports. The countries which show an excess of exports over imports are: Argentina, Austria-Hungary, Brazil, Chile, British India, Mexico, Roumania, European Russia, the

United States and Uruguay. The countries showing an excess of imports over exports are: Belgium, Canada, Cape of Good Hope, China, Cuba, Denmark, Egypt, France, Germany, Greece, Italy, Japan, Netherlands, Norway, the Philippine Islands, Portugal, Spain, Switzerland, Turkey and the United Kingdom.

The table which follows shows the average monthly imports and exports of the ten countries in which the exports exceed the imports in that part of the current fiscal year for which figures are now available:

	Average per moi	nth during 1901
Countries.	Imports.	Exports.
	Dollars.	Dollars.
United States	71,830,923	113,864,852

Essays on Trade Mismanagement.

The Southern Hardware Jobbers' Association are engaged in a good work as indicated by the contents of a recent circular distributed by them. They offer a series of prizes for the best essay to be written by any traveling salesman of any Southern jobbing house on "Trade Mismanagement and Its Attendant Consequences as Viewed from a Traveling Man's Standpoint." The prizes consist of \$50 in gold for the best essay, \$25 in gold for the next best, and \$10 in gold for the third in point of excellence. These prizes are offered in accordance with the following resolution which was adopted at a recent convention of the Southern Hardware Jobbers' Association:

Resolved, That we offer a prize of \$50.00 for the best essay of one thousand words, or less, written by a traveling salesman of some Southern Hardware jobbing house, on trade mismanagement and its attendant consequences, as viewed from a traveling man's standpoint; and that the competition shall open on Oct. 1, 1901, and close February 1, 1902. That the replies received be printed and numbered and sent out to the entire membership, with the request that they vote on the same, and the majority vote shall decide as to the best essay. And that the secretary be instructed to extend to the author an invitation to attend our next meeting and read his essay.

That the essay receiving the second highest number of votes be given a prize of \$25.00 in gold, and the third \$10.00 in gold.

The conditions of this contest are that each essay must be signed by a fictitious name or device, and the same name or device must be put upon a sealed envelope, within which are the real name and address of the author of the essay. This sealed envelope is to be enclosed with the essay.

Any traveling salesman of any Southern Hardware jobbing house is eligible to this competition. There is no charge for entering.

The essays may be sent by mail or express, charges prepaid,

and must reach the office of Secretary Carter not later than noon, February 1, 1902.

The address of all manuscripts should be as follows: "Southern Hardware Jobbers' Association, Prize Competition, C. B. Carter, Secretary-Treasurer, Knoxville, Tenn."

Our Imports for Manufacturing Purposes.

American manufacturers are evidently quite as busy in 1901 as they were in 1900. At least this is a reasonable conclusion from an examination of the figures of the treasury bureau of statistics, which show that the total imports of manufacturers' materials in the nine months ending with September, 1901, were greater in value than those of the corresponding months of last year, although an analysis of the imports, article by article, shows that in many cases the prices per unit of quantity have decreased. This decrease in price is so strongly marked that in many cases while the figures of value show a decrease in the nine months of 1901 as compared with those of 1900, the figures of quantity for the same period show an increase. For instance, imports of india rubber when measured by value show a slight reduction in 1901 as compared with 1900, while the quantity imported in 1901 shows an increase of more than 5,000,000 pounds as compared with the same months of 1900. Pig tin, used in manufacturing tin plate, shows in value a slight reduction in the imports of 1901 as compared with last year, but in quantity there is an increase of over 2,000,000 pounds. Imports of unmanufactured fibers show a decrease of more than \$2,000,000 in value as compared with those of 1900, yet the quantity shows a material increase. Taking the grand total of value of imports of raw materials for use in manufacturing, the imports in the nine months of 1901 compared with those in 1900, were: For 1901, \$221,469,984; for 1900, \$217,619,372; while in the month of September alone, the figures of the month in 1901 are \$22,725,325, against \$18,505,980 in September, 1900, a marked increase. They formed in September, 1900, 34 per cent. of the total imports, against 31 per cent. of the total imports in September, 1900.

The following statement shows the quantities of the principal articles imported into the United States for use in manufacturing, during the nine months ending September 30, 1900, and 1901, respectively:

Articles imported.			ns ending with ember,
		1900.	1901.
	11		
Iron ore	lbs.	1,584,845,280	1,625,274,240

The manufacture of tin plates was not introduced into the United States only experimentally until 1890.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

False Imprisonment.

QUESTION: Some time ago I borrowed \$50 from a person who was then a friend of mine. The debt ran on for a considerable space of time and my friend and I had a quarrel, whereupon he at once demanded that I pay him the \$50. I was at that time in a room in his house, and I told him that I would pay him the \$50 as soon as it was possible for me to do so. He insisted that it should be paid then and there. This I refused to do, and he arose from his seat, locked the door, put the key in his pocket, and declared that I should not leave the house until I had paid the debt. He kept me in this room, he being on the outside, for about six or eight hours, and then the door was unlocked by some one else. Kindly inform me whether I have any redress for such action as this.

REPLY: The action on the part of your former friend described by you constitutes a false imprisonment. In order that a person may be falsely imprisoned it is not necessary that he should be taken to a jail or that he should be confined on legal process. It is sufficient that he be unlawfully restrained of his liberty. You would, therefore, have a cause of action against your former friend in which action you would recover whatever damages, within the bounds of reamon, which the jury chose to allow you.

Powers of Committee of an Incompetent.

QUESTION: About five years ago my brother met with an accident, as a result of which he became partially insane and incapable of attending to his own affairs. He had considerable property at this time and another brother of his had himself appointed as a committee to look after the affairs of the incompetent. About two months ago the brother for whom the committee had been appointed died. I should like to be informed as to what the distribution of his estate will be, and as to whether or not the brother who was appointed as his committee will on that account receive all of his property.

REPLY: Upon the death of an incompetent person for whom a committee has been appointed, the powers of the committee over the estate of the incompetent cease. The Code of Civil Procedure also provides that upon the death of an incompetent, his estate must be administered as though no committee had ever been appointed. The brother who was appointed as the committee would not, therefore, necessarily be entitled to administer the estate, and would only receive his distributive share in your incompetent brother's property. Brothers of a deceased person have an equal right to letters of administration, and the one first obtaining them would be the proper administrator of the estate.

Macried Woman's Right to Dispose of Equity in Property.

QUESTION: Kindly answer the following question through your legal column. Can a married woman in New York State dispose of whatever interest she may have in property situated in New York State, upon which there is a mortgage, without the consent of her husband?

REPLY: In New York State a married woman owning real property upon which there is a mortgage may, without the consent of her husband, convey her interest, which is called her equity of redemption in the premises. In New Jersey, however, and in some other States, which are called common law States, it is necessary when a married woman wishes to convey her real property to have her husband join in the deed. The reason of this is that in most States of the Union, under certain circumstances, a husband is entitled to what is known as an estate by courtesy, which corresponds to the dower estate which a wife has in her husband's property. In States such as New Jersey, a married woman cannot defeat her husband's courtesy without his consent, and for this reason her husband must join in her deed to convey a slear

title. This is not necessary in New York State, for the reason that a married woman may defeat her husband's courtesy either by deed or will, without his consent.

When Quardianship Ceases.

QUESTION: For some years past I have acted as guardian for my niece. I have had entire charge and control of her property, and she has always lived with my family. My niece is now about nineteen years old and is about to be married. I desire to be informed whether upon her marriage my guardianship would cease, and if so, whether matters could be arranged so that I could still control her property?

REPLY: Upon the marriage of your infant niece, your guardianship over her person would terminate, and your niece's husband would become her guardian in that respect. If your niece's husband is of full age, he would also become the guardian of her estate upon her marriage. If, however, her husband is not of full age, the better opinion seems to be, upon marriage the guardian of the husband would become the guardian of the estate of the infant wife as well. If you desire to still control the property of your niece, even after her marriage, and if this was her wish as well, in New York State she could give you a power of attorney to manage her estate for her. We are of the opinion that, as your niece is an infant, it would not be sufficient for her to execute this power of attorney alone, and in all probability it would have to be joined in by her husband. If the actual result you desire to accomplish is the management of her property, if the way suggested was not practicable, doubtless some other means could be found to accomplish the same end.

That Easy Movement.

It is a noted fact that in that marvelous group of high buildings which at the present time represent an era of unprecedented energy in New York, and which include such edifices as the Manhattan Life, Bowling Green, American Surety, Standard Oil, Bank of Commerce, Exchange Court, Manhattan Hotel, etc., the Bommer Spring Hinge is everywhere in evidence. These world-noted hinges have become famous simply on account of "that easy recomment?" which is their prominent peculiarity. Their work is performed calmly but completely. The dealers in Builders' Hardware who do not carry them in stock are surely blind to their own interests, for merit wins friends and holds them. They are manufactured by Bommer Brothers, Brooklyn, N. Y.

George M. Landers' Promotion.

At a recent meeting of the directors of the North & Judd Mfg. Co., Hartford, Conn., George M. Landers was elected president in place of E. H. Whittemore, of Naugatuck, who had resigned. Mr. Landers is the son of the late Hon. Charles S. Landers, and the grandson of the late Hon. George M. Landers, who at one time represented the First District of Connecticut in Congress, and who was one of the leading citizens of New Britain. Mr. Landers is the secretary and treasurer of the Landers, Frary & Clark corporation, and a large stockholder in many of the larger local manufactories. He is a member of the New Britain Glub, and a director of the New Britain Institute. Mr. Landers is a young man of conspicuous business ability. He is a graduate of Yale Sheffield Scientific School. His age is 33 years. Mr. Landers became associated with his father in business and acquired a thorough knowledge of the cutlery and other lines of manufacturing, in which he is interested. The North & Judd Co., of which he becomes president, is the largest manufactory of saddlery Hardware in America. The concern is now erecting an immense new factory. The large interest which Mr. Landers now represents in the company in connection with his recognized business ability made this action of the board eminently fitting, although as heretofore his time will be largely occupied with duties as an officer of the Landers, Frary & Clark Co. by reason of his close relations to that company.

Peters Cartridge Co's. Pan American Exhibit.

Peters Cartridge Co., Cincinnati, Ohio, made a very attractive display of their goods at the Pan American Exposition. It was located in the East Ordnance Building. As a perfect illustration of the superiority of American ammunition for the rifle, revolver and gun, the exhibit was a satisfactory demonstration. It consisted of the products of the company, and included a number of reproductions of the excellent targets that have been made in many important shooting contests. Around two columns, one placed on the right and the other on the left of the exhibit, the products of the company were gracefully arranged, the arrangement being of a character that gave the appearance of the columns being entirely composed of cartridges. Two revolving drums were fitted with transparencies which reproduced the targets referred to. These drums were readily revolved by hand, so that those interested could study the products to the fullest extent. A very attractive part of the ex-

hibit was a large display four feet in height by nine feet six inches in length, which rested on artistically arranged cabinet work. The display was illuminated and consisted of a series of tablets containing figures and illustrations. In a tablet located on the right of the display, there were shown some of the most recent victories in which Peters' Cartridges and King's Semi-Smokeless Powder especially prevailed. On a similar tablet on the left, the several products or the company were graphically displayed. In the illuminated display referred to, five of the spaces were occupied by figures in the different classes of shooting, which were shown in colors presenting a stained glass effect. At the top of the display were exhibited two remarkable targets made by winners at meetings in 1900. A number of other targets were shown which were scarcely less interesting on account of their accuracy and considering the interesting character of the events at which the shots were made, it being noted that all the scores shown were made with Peters' Cartridges and King's Semi-Smokeless Powder. Taking it altogether, it was an exceedingly attractive display, and one well deserving of the attention which dealers handling this class of goods largely show an interest in.

Common Mistakes in Orders.

The writing of orders is a branch of business which may well receive careful attention. It is safe to say that in no other form of writing is so much expressed by a few symbols and abbreviated words as in the concise description used in modern times. And, as is frequently the case, so short and seemingly inexplicit are the marks, that an order which might be perfectly clear to the recipient would be unintelligible to a person in another line. The many thousands of articles comprised in Hardware make extreme care in ordering necessary. Not only is this the case in the name of the article, but the size, material, finish and other information is frequently necessary to correctly describe the goods desired.

It is not surprising considering the haste with which orders are written, that some necessary information is frequently omitted, or that abbreviations are sometimes inexplicit. It then becomes necessary for the recipient to use his knowledge of territory and conditions to determine, if possible, what is wanted.

In a recent issue of the *Hardware Merchant*, Hibbard, Spencer, Bartlett & Co., describe some common mistakes in orders. One of the first essentials of an order, they say, is legibility, and here the typewriter will be found a never failing aid. It is so easy to mistake an "a" for an "o"; "in" for "m"; "ir" for "n"; "e" for "l," or an uncrossed "t" for an "l" in ordinary rapid writing.

As is frequently the case, articles of the same name can be found in widely different lines, making the full name absolutely necessary. A mistake of this nature was recently made; a customer ordered two only No. 12 scrapers. No. 12 veneer scrapers were sent. The customer wanted "Road" scrapers. He might have received No. 12 foot scrapers, but a larger quantity would have probably been ordered. Recently a customer ordered some "R. T." files. "R. T." was assumed to mean "Rat Tail," and round bastard were accordingly sent. He meant "Regular Taper." Both of the above mistakes were due to inexplicit description.

Sending tile cleaners for file cleaners is a mistake rather hard to guard against, as F's and T's are frequently very hard to distinguish.

When a customer orders 6 dozen knives and forks he must expect to receive 3 dozen knives and 3 dozen forks, as these goods are never sold in pairs.

The following instance will give an idea of similarity of totally different articles when hurriedly written. An order was received for "Ass'd Slim Tapers" and "Asses Skin Tapers" were sent. Take a pencil and rapidly write both of the above, one above the other, and note how excusable was the error

A frequent mistake in ordering and filling orders for metallic cartridges is due to the similarity of short and shot. These terms should be very painly written. A long list of similar cases might be cited.

We received an order recently for No. 33 steel measures, and sent the sheet steel half bushel measures of that number. We soon learned that No. 33 steel measuring tapes were wanted, and which might have been sent had it not been for the seeming correctness of the order as written.

The extra charge for tinning sheet copper has been a source of considerable correspondence. One customer wrote that he was short 6 tinnings in the last order. He did not know what they were, but as they were charged to him he wanted them. Another wrote: "On checking your invoice of the ——, I find I am short 12 tinnings, I am entirely out of these goods; please send them immediately."

In 1620, iron works were built in Virginia, but these were destroyed and the workmen massacred by the Indians in 1622.

Toy Sweepers for Little Folks.

Under the above heading the National Sweeper Co., Marion, Ind., are sending out to the trade special circulars in the interest of the line of Toy Sweepers they are engaged in manufacturing. These Toy Sweepers are fully in keeping with the handsome style of their regular goods, being well made and neatly finished especially for the prices at which they are sold under the names of "Our Baby" and "Little Princess," their best selling Toy Sweepers. The "Our Baby" Sweeper is shown in the cut operated by a little girl, and it can readily be seen how cleverly this Sweeper is proportioned for the use it is intended. The "Little Princess," the larger size of the two, is fitted with a rubber furniture protector, and has a heavier brush, and although intended more for a toy, it is perfectly adapted to light household use, but, of course, will not do the kind of work which their regular "Roller Bearing" Sweepers will accomplish. The National

Sweeper Co. is very persistently exploiting their new "Roller Bearing" device as applied to their Sweepers, which is becoming exceedingly popular with the trade. Although they are bringing the most pressure to bear on this "Roller Bearing" feature, they are not neglecting the quality and finish of their goods, which the trade has recognized from the start possess a valuable degree of merit, and greater talking points than anything yet placed on the market.

Lubricated Wire-Patched Bullets.

Sportsmen generally will be interested in the new patent Lubricated Wire Patched Bullets now being advertised and put on the market for the first time by the National Projectile Works, of Grand Rapids, Mich. These bullets have met with favor wherever they have been introduced, and sportsmen who have not yet tested them will be agreeably surprised when they come to use them either for hunting or target practice. They are perfectly adapted to any style of gun, slow or rapid twist, black or smokeless powder, and the manufacturers claim they will not injure the gun and that they are more uniformly accurate in shooting than anything of the kind that has ever been placed on the market. Illustrated catalogues and descriptive price lists will be mailed on application.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interests to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED OCT. 21, 1901.

306,758. F. W. Kenney, Providence, R. I.

306,763. Plane, S. G. Laskey, Chelsea, Mass.

306,839. Pocket Knife, G. W. Korn, New York, N. Y.

306,840. Pocket Knife Handle, G. W. Korn, New York, N. Y.

306,849. MANUFACTURE OF RAZOR BLADES, J. Memmott, Worcester, Mass.

306,862. Screw Driver, J. M. Ricketts, Charleston, Ill. PATENTS ISSUED OCT. 22, 1901.

684,774. Screw, W. T. Baggs, Baltimore, Md., assignor of one-half to H. Mertz, same place.

684,784. Apparatus for Making Lemonade, J. De Bolster, Amsterdam, Netherlands.

684,825. Can Opener, S. A. Johnson, Winona, Minn.

684,846. Level, A. J. Moss, Los Angeles, Cal.

684,873. Sash Lock and Lift, J. J. Schairer, Clint, Tex.

684,877. SASH FASTENER, W. B. Smoot, Salisbury, N. C.

684,992. VISE, J. R. Long, Springfield Township, Summit Co., Ohio.

PATENTS EXPIRED OCT. 28, 1901.

307,131. STAY ROLLER FOR SLIDING DOORS, A. B. Mattoon, Owasco, N. Y.

307,150. Screw Driver and Adjuster, C. Thimas, Terre Haute, Ind.

307,163. Pipe Tongs or Wrench, E. F. and G. A. Barnes, New Haven, Conn.

307,186. Spring Jaw Wrench, F. L. French, Meriden, N. H.

307,187. Screw Driver, F. L. Hamlen and Z. T. Furbish, Augusta, Me.

307,223. Plane, C. H. Pike, West Troy, N. Y.

307,229. BOLT CUTTER, J. R. Rowlands, Brooklyn, N. Y., assignor to J. G. Hoffman Mfg. Co., same place.

PATENTS ISSUED OCT. 29, 1901.

685,273. WRENCH, J. W. Grubbs, Carterville, Mo.

685,275. Mor Holder, W. B. Hadley, Eau Claire, Wis.

685,291. Bucksaw, G. H. Nicol and J. M. Lionberger, Dallas City, Ill.

685,306. Door Check, P. Stewart and O. S. Snyder, Medford, Ore.

685,386. Screw Vise, C. Rauhe, Dusseldorf, Germany.

685,403. Combined Hinge and Door Check, J. Hughes, New York, N. Y.

PATENTS EXPIRED NOV. 4, 1901.

307,440. Bench Dog, T. Crispin, Detroit, Mich.

307,455. Wheelbarrow, J. Graves, Brooklyn, N. Y.

307,472. NAIL EXTRACTOR, W. E. Lawrence, New York, N. Y.

307,507. RATCHET DRILL, C. E. Tunelius, Chicago, Ill.

307,545. C. E. Hart, New Britain, Conn., assignor to Stanley Works, same place.

307,547. WICK TRIMMER, R. Hoffman, Cohoes, N. Y.

307,585. Door Hanger, I. B. Perry, Knoxville, Tenn.

PATENTS ISSUED NOV. 5, 1901.

685,736. DINNER PAIL, O. R. Atwell, Berlin, Neb.

685,801. Outside Window Fastener, A. M. Taylor and F. F. Fogg, Hampden, Me.

685,809. SASH HOLDER AND FASTENER, O. Williams, St. Johnsville, N. Y.

685,811. LIFTING JACK, H. W. Armstrong, Oakmont, Pa.

685,837. Burglar Alarm and Door Check, C. H. Hawkinson, Chicago, Ill.

685,878. Computing Price Scale, E. F. Spaulding, Arlington, Mass.

CONSULAR COMMERCIAL COMMENTS.

AMERICAN MACHINES IN ROUMANIA

A recently published report of the German consul in Bucharest gives information as to Roumania's importation of machines and the condition of that market. The consul notes that during the past year the import of American harrows increased, and attributes this to their price, which is 15 to 20 per cent. lower than the German article. He also says:

In agricultural machines, the United States and Austro-Hungarian makers are the chief competitors of Germany. American firms having agencies are increasing their sales in Roumanian markets. They are meeting the wishes of the buyers in credit terms and peculiarities of style and construction, and are forcing the Austrian agencies to do likewise.

The consul urges German exporters to make efforts to retain their share of this trade. SIMON W. HANAUER,

Frankfort, Oct. 5, 1901. Deputy Consul-General.

Consul-General Hughes, of Coburg, under date of Sept. 24, 1901, says that a prominent business man from Roumania has told him of the many chances that Americans would have in that country. Factories of all kinds would be helped, according to his statements, by the government, especially in the weaving and spinning lines. American goods have a hopeful future in Roumania, if properly introduced.

GLASS WORKS IN SPAIN.

Consul-General Hughes reports from Coburg, Oct. 10, 1901: The German press says that at Gijon, on the north coast of Spain, a company has been started, with a capital of 6,000,000 pesetas (\$1,158,000), for the purpose of establishing glass works and flour mills. Among the goods required are glass-working machinery, fire-proof clay, and calcined firestone. Americans might bid for these supplies.

PRICE LISTS FOR SIBERIA

Consul-General Hughes, of Coburg, under date of Oct. 10, 1901, says:

The trade bureau of the Siberian Railroad publishes a notice that it wishes to have price lists, illustrated catalogues, etc., of all kinds of goods which are necessary and useful in Siberia. The chief of the bureau requests that price lists, sample cards, and catalogues be addressed to Monsieur N. Selikhoff, Service Commercial du Chemin de fer Grand Siberia, Tomsk (Russia).

IMPORTATION OF FARMING IMPLEMENTS INTO TURKEY.

Under date of Oct. 9, 1901, Mr. Eddy, secretary of legation at Constantinople, sends translation of a circular note from the Porte relative to the importation of farming implements into the Ottoman Empire, as follows:

By virtue of a decision of the Imperial Government, the limit fixed for the importation, free of customs duty, of the farming implements mentioned in the appended list, has been prolonged by ten years, beginning from August 4 ultimo (old style). Iron scythes with wooden handles, which figure in this list, returning into the category of tools of old system, will be subjected to the entrance duty.

LIST OF AGRICULTURAL IMPLEMENTS FREE FROM DUTY.

Plows, iron, with wooden handles, worked by hand, horsepower or steam; winnowing forks, of wood or iron, worked by hand, steam, or water power; reapers, binders, hayrakes, harrows, cultivators, rollers, sowers; machines for digging potatoes and beets, for cleaning rice, for crushing seeds and extracting oil, for pulverizing dirt and manures; sieves for cleaning and separating grain; threshing machines, worked by hand, animal, steam, or water power; sawmills, lawn mowers; machines for turning and airing grass, called "Catona;" iron cultivators, called "Muzg;" pulverizers for manure, called "Mihdjem;" machines for cutting beets and for crushing grains, corn, and seeds for animal food; sprayers and garden syringes, sickles, scythes, hoes worked by hand or animal power; sprinklers; machines for distributing fertilizers, for making bales of hay; rakes with grappling hooks, and machines for making and tying bundles of hay.

TRADE OPENINGS IN LOURENCO MARQUEZ.

This office has received many inquiries from manufacturers in the United States who wish to do business with the merchants of this port. It seems to me that a brief general reply might be made, through the medium of the Consular Reports, to all parties interested.

I wish to point out, first, that there will be little business done here until the war has ended. At present, the entire transportation system of South Africa is taxed to its utmost capacity to keep the troops in garrison and in the field supplied with rations, munitions of war, etc., and consignments of goods intended for mercantile houses often lie for months in the holds of vessels at various South African ports before they can be landed. Even after they are landed, if consigned to inland ports, they may have to remain on the docks for weeks before they are finally dispatched by rail to their destinations. Again, railway traffic is not perfectly safe, as the Boers every now and then capture or destroy a train on the line of the Delagoa Bay Railroad.

However, a few people are making preparations for a large business when the time comes, and I would suggest that those interested in this subject correspond with the parties named below.

Isaac J. Lithauer, an American citizen, whose present address is care of J. C. A. Henderson, No. 4 Sun Court, Cornhill, London, England, is making preparations to open a large importing house here, and will handle American vehicles, machinery, tools, furniture, railway and mining supplies, etc.

J. C. A. Henderson, an English capitalist, of the same address, is managing owner of the Lourenco Marquez Water Co., which supplies this town with water. He contemplates making great improvements, and will want steam pumps, boring machines for artesian wells, tools, meters, and steel water pipes. Mr. Henderson has obtained the tramway concession mentioned in my report of Oct. 14, 1898, and intends to build and operate an up-to-date line of electric trolley cars.

R. S. L. Attwell, an Englishman, whose address is Caixa 206, Lourenco Marquez, has secured a large tract of ground from the Portuguese government, and is going into farming on an extended scale. He would like to hear from American manufacturers of agricultural implements and tools, pumps, windmills, tide-water wheels and gearing.

William Blackwood, the leading builder of this district, is thinking of handling building materials and builders' fine supplies, and wants to hear from manufacturers of these lines of goods.

Messrs. Bendahan, Abejdid & Co., an American firm doing a large business here, wish to hear from dealers in boots and shoes, ready-made duck and khaki clothing, hats, furniture and household supplies. W. STANLEY HOLLIS, Consul.

Lourenco Marquez, Sept. 11, 1901.

Success In Advertising.

Government statistics are authority for the statement that the business men of this country are spending something like six hundred million dollars annually in advertising, and it is estimated that nearly one million business houses are regular advertisers. This statement suggests the magnitude to which this department of business has grown of late years. Thousands of men are now devoting their entire time to the preparation and placing of advertising matter and tens of thousands make a living by canvassing for advertisements. An increasing number of large concerns nowadays maintain an advertising department as a part of their equipment and pay handsome salaries to the experts who manage this branch of their business. In short, a new profession—that of advertising expert—has arisen, which offers attractive pecuniary prizes to those who succeed in it. There are few specialties to-day that are more valuable to the young man in business than a good working knowledge of advertising. The demand for well equipped advertising men is away in excess of the supply. To meet this demand a well-known Philadelphia business school has just instituted an advertising course as a new feature of its curriculum. It proposes to furnish to those who are employed or engaged in business pursuits during the day instruction in advertising by means of evening classes. The course mapped out is simple, yet thoroughly comprehensive, including a series of lessons and lectures designed to develop the qualifications essential to a good advertising man-namely, common sense, originality, power of expression and knowledge of human nature. To this should be added a thorough knowledge of the business to be advertised, without which efforts to secure public attention will lack that definite and practical character which is essential to the best results. In any instruction on this subject it should be prominently brought out that many of the popular attempts to catch the public eye, while striking and amusing, are very often unbusinesslike and grotesque. Much of the best advertising is done by men who are in close touch with the business, and without a professional training have developed a skill in this direction. In almost every concern, manufacturing or mercantile, large or small, there is an opportunity for the exercise of thought and skill in this field, inasmuch as good advertising contributes so largely to success in business. Practical knowledge in this field is good business capital .- Metal Worker.

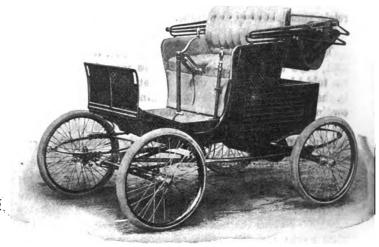

A Big Persuader.

It is fitting that the United States, which has so many of the biggest things, should have the biggest gun. The biggest gun is now awaiting its carriage in the shops of the Army gun factory at Watervliet, N. Y. It was planned ten years ago, and has been over five years in process of construction. It is the most powerful engine of destruction known. It is a sixteen-inch breech loading rifle, and it is intended for harbor defence. Forty of these monsters were recommended by the Endicott board for the harbors of New York, Boston, San Francisco and Hampton Roads. New York was to have eighteen, Boston eight, San Francisco ten, and Hampton Roads four. According to present intentions, this number will be somewhat reduced. Some idea of the size and power of this gun may be had from the fact that it throws a projectile weighing 2,370 pounds. It requires 1,176 pounds of ordinary powder to do this, or 576 pounds of the new smokeless powder. The cost of a single firing of the gun is over \$1,500, of which the projectile alone costs \$1,000. The gun has a range of twenty-one miles. It has a penetrating power that will, it is estimated, bore 42.3 inches into hardened steel. The missile which it hurls is nearly as long as a man, five feet and four inches. It will throw this projectile, if aimed at an angle of 45 degrees, to a height in the trajectory of over five miles.

This great gun could appropriately be called "the persuader." It would have a powerful influence on anything or anybody that it was used against.—New Haven (Conn.) Journal-Courier.

Stevens-Duryea Carriage.

J. Stevens Arms and Tool Co., Chicopee Falls, Mass., have completed arrangements by which hereafter they will manufacture automobiles. They have installed in their factory the necessary machinery, and the Stevens-Duryea Carriage, which is the production they have in contemplation, is shown in the illustration which we show herewith. The room which is now being occupied with automobile machinery is 160 x 45 feet. It is well lighted and conveniently arranged for the purpose to which it is being adapted. The Stevens company has ample power with which to run the machinery. It is thought that the room now being used may eventually be converted into a motor-room alone and the carriage-making transferred to another part of the factory. All of these details, however, will depend upon the number of machines

STEVENS-DURYEA CARRIAGE.

that may be turned out. The Stevens company are in such close touch with the trade that it will be of great advantage to them in placing the goods on the market. This automobile will be equipped with a five-horse power double cylinder, horizontal motor, of the four-cycle type. The transmission will be by gearing, with three speeds and reverse. Intermediate speeds can be secured by throttling the lever. The operation is so simple that a child can work it from the seat with the slightest effort. The body bears resemblance to the steam carriage, though a little shorter. The chief aim has been simplicity without lessening the efficiency. A prominent feature is that the machine requires no additional water for making a trip. With other machines this is claimed to be a common fault. It is also guaranteed that the water will not freeze, chemicals being used as a preventive. Steam carriages are said to consume a gallon of gasoline in from seven to ten miles of travel, but the Duryea machine will consume but one gallon in each thirty miles. The success of the new carriage is believed to be assured, but the Stevens company are going moderately at the work, that the same thoroughness may accompany this product as in the others manufactured by this concern.

Pennsylvania Wholesale Hardware and Supply Association.

The Pennsylvania Wholesale Hardware and Supply Association held its regular meeting in Philadelphia, Pa., on Thursday, Oct. 24. The meeting convened in the rooms of the Philadelphia Hardware Merchants' and Manufacturers' Association in the Bourse Building, and was called to order promptly at 10 A. M. by the president, J. M. Kemmerer, Scranton, Pa. The following members answered to the roll call:

C. Morgan & Sons, Wilkes-Barre, B. F. Morgan.

Phelps, Straw & Co., Wilkes-Barre, Geo. W. Lewis.

Pennsylvania Supply Co., Wilkes-Barre, Wm. H. Cunningham.

Bright & Co., Reading, Pottsville and Hazleton, G. H. Bright.

Jol n II. Obold, Reading, J. H. Reminger.

Stichter Hardware Co., Reading, E. F. Feather and A. B. Stein.

Bard, Schlott & Co., Reading, A. Raymond Bard.

Bittenbender & Co., Scranton, J. M. Kemmerer.

Foote, Shear & Co., Scranton, Frederick W. Shear.

Chas. B. Scott, Scranton, Chas. B. Scott.

Reilly Bros. & Raub, Lancaster, H. L. Raub.

Steinman Hardware Co., Lancaster, H. S. Franklin and G. I. Franklin.

Hazleton Supply and Mfg. Co., Hazleton, Wm. H. Taylor. Geo. Krause & Co., Lebanon, Geo. W. Krause.

P. A. & S. Small, York, Philip A. Small.

C. Driesbach's Sons, Lewisburg, H. G. Driesbach.

A. J. Roat, Kingston, A. J. Roat and H. Roat.

L. C. Thompson, Pottsville, L. C. Thompson.

The minutes of the previous meeting were read and approved. On motion of Wm. H. Taylor a committee was appointed to prepare suitable resolutions upon the death of the President of the United States. The chairman appointed Messrs. Taylor, Morgan and Cunningham as the committee. The report of the Price Committee was presented and read by Mr. Lewis, chairman, and on motion of Mr. Taylor was accepted, and after some discussion on the subject was ordered filed. H. G. Driesbach, Lewisburg, then presented and read a very thoughtful paper on the subject of "Difficulties in the Profitable Conduct of the Wholesale Hardware Business and their Remedies."

It was received with manifest tokens of approval, and on its conclusion a vote of thanks was tendered Mr. Driesbach for his able paper, which was ordered spread upon the minutes of the meeting and the secretary directed to send a copy of it to each member of the association.

A recess was then taken in order to meet the Philadelphia Hardware Merchants' and Manufacturers' Association at luncheon, after which a joint meeting of the two associations was held, and on calling the meeting to order it was decided, on motion, "that the consideration of making a price card be postponed until the next meeting, with a recommendation that local price cards be established as far as possible."

The Committee on Resolutions Pertaining to the Death of the Late President of the United States then reported suitable resolutions of respect, which, on motion, were accepted and ordered spread upon the minutes and the committee discharged with thanks.

A discussion followed on the management of the various Hardware interests. Papers were read by F. W. Huff of the Supplee Hardware Co. Addresses were also made by T. James Fernley as well as a number of others, after which, on motion of Mr. Lewis, it was arranged that the next meeting of the association be held in Wilkes-Barre, Pa., on Feb. 13, 1902, at which time and place the New York Hardware Association would hold their regular meeting, after which the meeting was adjourned.

The officers of the Pennsylvania Wholesale Hardware and Supply Association are as follows: President, J. W. Kemmerer, Scranton, Pa.; first-vice-president, George Bard, Reading, Pa.; second vice-president, A. J. Roat, Kingston, Pa.; secretary and treasurer, H. L. Raub, Lancaster, Pa.

The Executive Committee consists of George W. Lewis, Wilkes-Barre, Pa., chairman; A. B. Stein, Reading, Pa.; H. S. Franklin, Lancaster, Pa.; William A. Avery, Scranton, Pa., and L. C. Thompson, Pottsville, Pa.

These gentlemen were all in attendance at this meeting.

SMOKER.

On Thursday evening the visiting delegates were entertained by the Philadelphia Hardware Merchants' and Manufacturers' Association at a smoker held in the cafe of the Bourse Building, luncheon being served at 7:30 P. M. Besides the delegates of the Pennsylvania Wholesale Hardware and Supply Association, about 100 members and guests of the Philadelphia Association were present. After luncheon William Peters, vice-president of the Philadelphia Association, made an address of welcome to the visiting delegates, and introduced J. W. Kemmerer, president of the Pennsylvania Wholesale Hardware and Supply Association, who responded in a few well chosen words. Wm. H. Taylor, of Hazleton, also made an interesting address, after which an entertainment consisting of songs, humorous recitations and feats of legerdemain followed. Souvenir pipes of unique design were presented to those present, and after voting the smoker and entertainment a brilliant success the delegates and friends departed.

FRIDAY'S EXCURSION.

By previous arrangement the Philadelphia Hardware Merchants' and Manufacturers' Association entertained the visiting delegates on Friday, the 25th inst., by an excursion on the Delaware River and a visit to a number of different manufacturing plants, after which the party returned to the Manufacturers' Club, where an informal luncheon was served, Fayette R. Plumb presiding. Besides the delegates and their friends, a number of prominent manufacturers met at luncheon, after which addresses were made by a number of the visiting delegation.

A vote of thanks was then tendered to T. James Fernley, the Entertainment Committee and the Philadelphia Hardware Merchants' and Manufacturers' Association for the most excellent entertainment tendered to the Pennsylvania Wholesale Hardware and Supply Association.

A Review of the Industrial Conditions of the Thirteen Original Colonies.

In view of the vast and unsurpassed industrial resources of the United States at this time, the beginning of the twentieth century, of great interest is a review of the industrial conditions of the thirteen original colonies preceding and up to the time of the American Revolution. The early industrial conditions of the country are the subject of a studious monograph by Edward V. Shepard, Chief Clerk of the Patent Office, who collected the information in connection with his official duties.

Mr. Shepard's material was put in its present shape for the use of the Commissioner of Patents, but the information will form the nucleus of a much more exhaustive treatise on the subject which will be incorporated in the proposed history of the patent office. A most vivid picture of the primitive conditions, the slow growth of manufactures, and the determined opposition of England to all industrial progress in the colonies, is shown by the following extract from the monograph:

"The clothing of the colonists for many years was obtained from Dutch traders and from England, payment being made in barter of the products of the colonies. In 1660, England prohibited further trading with the Dutch. restriction naturally raised the purchase price of clothing and induced the colonists to attempt to manufacture their own clothing. In 1660 a law was passed in Virginia for the encouragement of textile manufactures, but it was promptly annulled by England. In 1710 the mother country enacted a law prohibiting the carrying of woolen goods and hats from one colony to another. These restrictions placed on the trade were the cause of the colonists wearing dressed skins instead of woolen clothing, although secretly wool was spun and woven by the women of the households, nearly every family weaving its own clothing, blankets and linens, and selling the surplus to neighboring merchants. A woolen hat factory in Massachusetts was declared in 1750 to be a nuisance and was suppressed. A society was formed in 1765 in New York City to encourage the home manufacture of woolens, the members pledging themselves not to eat the meat of lamb and sheep, nor to buy imported woolens. The need of the country was a supply of wool, and the killing of mutton was consequently discouraged.

"Homespun was generally worn, even the troops being dressed in it, while Washington, at the time of his inauguration wore a suit of the same humble fabric. Its manufacture was extremely simple, but the colors used were not fast, so that the wearer of the goods, if caught in a rain, was quite likely to return home unrecognizable.

"In 1794, a successful woolen factory was started in Massachusetts. Grey mixed broadcloth was being made in 1804 at Pittsfield, Mass. The census of 1810 showed that most of the woolen goods were still being made in families. This continued to be the case until the introduction into the factories of the spinning jenny, the power loom, the nap cutter, and other labor-saving devices, the factories simply weaving the yarn that had been spun in the houses in the country, employing the women of the households who were already skilled in the use of the wheel and the hand loom.

"The Secretary of the Treasury in 1791 reported that the manufacture of wool and felt hats was well established, although the industry was but a few years old, as in 1732 England had forbidden their exportation, so that there was no market for the product. Up to 1776 there were no carpets made in the colonies other than rag carpets. England forbade the exportation of knitting frames to the colonies, in order to sell her own manufactured goods here. In 1662, Virginia offered ten pounds of tobacco for every dozen pairs of woolen or worsted stockings. Nothing appears to have been done in the industry, however, until 1723, when a stocking loom was smuggled into the country. At the opening of the Revolution a large supply of stockings was required for the troops, so that stocking factories were established in New York, Virginia and Maryland. It was not until 1831 that power was applied to the looms in the making of hosiery.

"Progress in the manufacture of cotton and silk fabrics, in coal mining, ship building and various other industries was equally slow, for substantially the reasons heretofore given.

"The first settlers in America were from the nature of their surroundings an agricultural people. The few tools they possessed were either brought from England or roughly turned out of such material as their limited facilities permitted. The only metal the Puritans knew was bog iron ore, very brittle, so that it was almost impossible to make suitable tools from it. Their agricultural implements were the plow, occasionally a harrow, spade and a fork, while their household utensils were few and primitive. The policy of the mother country was to make her colonies as profitable as possible to herself. All kinds of restrictions were placed on manufacturing. The colonists were not allowed to sell their products except in England, nor were they permitted to buy except from her, and in her boats. After the Revolution the colonies, being estranged from the mother country, were thrown on their own resources, and an incentive was then given to manufactures and the various arts. crops were tobacco, potatoes, wheat and corn. In Maryland and Virginia the principal industry was raising tobacco. Up to 1812 wheat and flour were largely exported.

One of the earliest inventors, Oliver Evans, gained his wealth and distinction almost entirely through his inventions in flour mills. Before the Revolutionary War the New England colonies carried barter with the West Indies in molasses, rum and sugar. Connecticut and Massachusetts had sugar refining mills. The invention of the cotton gin by Eli Whitney, in 1792, led to the development of the cotton industry in the Southern States. It was largely on account of the importance of this crop that for nearly three-quarters of a cen-

tury the Southern States were so prominent in national affairs. It would be presumed that the attention paid by Americans to the food resources of their country would naturally lead to improved agricultural implements, but for some time invention in this line was very limited. It was not until 1819 that a plow was produced in this country, replacing the cumbrous affairs which were imported principally from Scotland. The reaper appeared in 1833, and a successful thresher not until 1850; but from that time on the total value of the manufacturing interests in this country exceeded that of agricultural products.

"Outside of the cultivation of the soil, other industries progressed very slowly; thus, for instance, although iron ore was discovered by Sir Walter Raleigh in North Carolina, it was many years before the ore was regarded as of sufficient importance to be worked, the raising of tobacco being so much more profitable and easier. However, in 1620, the London Co., of England, sent forty iron workers to establish a "bloomery" in Virginia. The fuel used was charcoal. Unfortunately, the following year the whole working force was massacred by Indians, and it was not until 100 years later that a second attempt to work iron was made in the colonies. In 1627, the General Court of Massachusetts Bay Colony, granted to Abraham Shaw, one-half the benefit of any 'coles or iron stone which shall be found in any common ground, which is in the countrye's disposing.' In 1645, the same colony granted a charter to a company to make iron from bog ore, on the condition that 'the inhabitants of this jurisdiction be furnished with bar iron of all sorts for their use.'

"Ore was discovered in Connecticut in 1651, and there are several instances after that time of special privileges being granted to persons to engage in iron mining. Until 1755, when Darby, an Englishman, discovered a process of working iron ore with coke, which, together with the aid of new blowing engines, made the industry profitable, the working of iron was engaged in but little. At the time of the Revolutionary war, however, New Jersey, Pennsylvania, Connecticut, Maryland and North Carolina found iron mining profitable. The 'bloomeries,' as they were called, required but little skill to construct, and that at a small expense. A building containing a rude hearth and a chimney, with a small water fall to run the blast and hammer, and a convenient supply of charcoal and ore were all that was necessary to turn out a few hundred pounds of iron, which was considered a fair day's work.

"After this the primitive forge remained idle until again called into special use. Pennsylvania began the manufacture of iron in 1717, and in 1728 she had four furnaces. In 1725, all the large coast colonies were producing iron, which was used by the village blacksmith in making simple farm and household utensils, casting hollow ware and fireplace fixtures. A small quantity of this crude iron was exported, and in exchange were taken cutlery, tools and other goods, which the colonists did not possess sufficient skill to manufacture. In 1750, the erection of steel furnaces, rolling and slitting mills and plating forges was stopped by England, as a common nuisance, the policy of the mother country having always been to enrich her home manufacturers at the expense of the colonists.

"In 1750 England restricted iron products in the colonies to bar and pig iron and castings. The blacksmith still worked away at wrought-iron implements. Nails were made by the colonists, at least, in a small way, in a chimney corner, evenings and stormy days. Up to 1776 so little progress had been made in the working of iron that the casting of a ten-pound cannon was of so serious a nature that few dared to attempt it. The Continental Congress used the public funds and employed the troops in starting iron furnaces and factories, and this industry had become firmly established by the end of the Revolutionary war, as had also the manufacture of edged tools, although implements made in this line at that time were crude and not durable."

RECENT TRADE PUBLICATIONS.

CARRIER CUTLERY Co., Elmira, N. Y. Fifty-two-page catalogue, oblong pamphlet, covering their extensive line of Pocket Knives, Razors and Shears manufactured and controlled by the Cronk & Carrier Mfg. Co., Elmira. The catalogue is illustrated with half tone cuts showing every description of pocket knife made by this company, including one and two blade, three and four blade, in all the usual styles of cocoa, ebony, stag, pearl, buffalo horn, etc., etc. It certainly is a very attractive catalogue, and from which a stock of goods might readily be selected without much fear of the result being a disappointing one, as the illustrations are as perfect in the way of description as it is possible to have. The line of Razors that is added to this catalogue, manufactured by this company, is handsomely illustrated in the same manner, indicating the plain and hollow ground styles, and those with ornamental handles. The catalogue includes in its contents the line of shears for which this company is noted in the Hardware trade, including Pocket Scissors, Ladies' Scissors, Straight and Bent Trimmers, Bankers' and Paper Hangers' Shears, Barbers' Shears and Buttonhole Scissors. These goods are furnished in all the up-to-date styles, and finished in full nickel or japanned handle and nickel-plated, the scissors being full crocus finish and nickeled. Altogether, they make a very attractive assortment of goods of well-known excellence.

WAGNER MFG. Co., Sidney, Ohio. Catalogue No. 10, pamphlet form, 72 pages, covering their line of Household Specialties, under the head of High Grade Iron and Aluminum Hollow Ware with the manufacture of which this company has been identified for a long time. It includes in its contents many desirable cooking utensils made in cast aluminum that are perfectly practical. As to this particular specialty, they have devoted considerable time to the perfecting of it, studying constantly the wants of the public, and devising utensils that are not only durable but convenient and easily operated, with the idea of relieving to a great extent the usual labor necessary in the kitchen. The catalogue is fully illustrated throughout with their entire line, and no dealer could fail to find a number of articles he might safely add to his stock. Included in the contents, which embrace everything in the way of kitchen utensils not only in aluminum, but also in polished iron and nickelplated ware, will also be found cast aluminum letters which they manufacture in just such sizes as can be profitably carried in stock by dealers. They are put up by the company in attractive display cases, which assist materially in making them popular sellers. A finely polished oak board is given free with the first order from each dealer for one case of letters. This catalogue is one well worthy of our readers writing for and adding to their Hardware library.

Sawyer Tool Co., Fitchburg, Mass. Catalogue D, small size pamphlet of 64 pages, of the fine tools and Hardware specialties manufactured by this incorporated company. This is the most complete catalogue that they have issued for the benefit of the trade, the prices and lists in this catalogue superseding all previous editions. Among the articles sold by them may be mentioned Steel Rules, Spring Tempered Rules, Graduated Centre Gauges, Draughtsmen's Steel Straight Edges; also Bevel Straight Edges, Combination Squares, Bevel Protractors, Combination Sets and Carpenters' Combination Squares. These goods are all made with hardened blades, embodying the latest improvements in con-

nection with their manufacture. Included in the contents of the catalogue will be found Try Squares, Adjustable Squares, Depth and Bevel Gauges, Combination Bevels, etc., etc. A large variety of labor-saving appliances will be found incorporated in the contents of this valuable little catalogue.

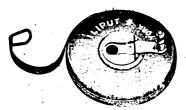

Union Hardware Co., Torrington, Conn., Tower & Lyon, 95 Chambers Street, New York office. Pamphlet catalogue of 16 pages, covering their line of Handles, Base Knobs, Mallets and Turned Wooden Goods of every description, in foreign and domestic woods, either plain, stained, polished or enameled. This line includes Chisel Handles of every description, File and Screwdriver Handles, Jewelers' File and Graver Handles in large variety; Carving Tool Handles, Octagon Screwdriver Handles, Brad, Sewing and Pegging Awl Handles; Brad and Scratch Awls, Plumbers' Drift Plugs and Turn Pins. Included in its contents is a full line of Base Knobs with and without rubber tips; Floor Knobs with rubber ring; round and square hickory and lignum vitae Mallets, etc., Bung Starts, Caulking Mallets and Belaying Pins. They also manufacture Sailors' Palms, Sheaths and Belts and a line of Electrical Supplies in wood, which is a specialty with them, consisting of Push Button Shells, Transmitter Boxes, Battery Boxes, Switch Boards, etc.

THE CHAMPION STEEL RANGE Co., Cleveland, O., have recently printed a handsome catalogue in two colors for distribution to the Hardware and stove trade. This catalogue is profusely illustrated, bound in deep green paper covers, having a side title in silver. The publication consists of 44 pages, and is known as Catalogue No. 5. Full descriptions are given in its contents of the various lines of Champion Steel Ranges manufactured by the company in sufficient styles and sizes to meet varied requirements. In the description given, emphasis is laid on the saving of fuel effected by the householder in the use of these ranges, which is said to differ in construction from others in the fact that they do away with either the cumbersome sand box or cement bottom, resulting thereby in a great saving of weight. The arrangement of the air flue below the main heating flue is such that the air being conducted through the ash pit to the combustion chamber, becomes heated in passing under the main heating flue, producing consequently, it is claimed, a much more perfect combustion and economy in fuel to the extent of the heat imparted to the air in its passage. These ranges are made of cold rolled steel plates, which are carefully fitted and riveted together, and lined with a heavy quality of asbestos. The fire box is lined with two-inch Savage fire brick, and fitted with duplex grate. The oven is so braced as to prevent warping, and yet not to interfere with the heating of it. The oven doors are arranged to open down, thereby forming a shelf, and in this connection are so perfectly balanced that they can be opened and closed with great ease. In connection with the descriptive matter in the catalogue, tables are presented showing the sizes in which the goods are made, the dimensions of the ovens, top surface, size of cooking holes and list prices complete. A useful feature is information given in the closing pages for the dealer when ordering repairs and setting up stoves. Among the newest productions of the company is the double flue, hot blast Champion, a folder describing which accompanies the cata-This is referred to as effecting a saving of at least one-third in fuel. The special features of its construction include interchangeable key plates, pouch feed, roll top closet, screw draft, and encased cast white enamel portable reservoir. In fact, the entire production of this company is claimed to be thoroughly up to date, and deserving the close attention of all Hardware dealers handling steel ranges.

19G9G9G9G9G9G9G9G NEW GOODS AND SPECIALTIES. D6D6D6D6D6D6D6D6D6D6D6

Liliput Measuring Tapes

One of the industries which has been formerly essentially English, but which has now been brought to a high state of perfection here, practically excluding the English article, is the manufacture of Measuring Tapes, both steel and metallic. This has been accomplished to a great extent by the Keuffel & Esser Co., whose extensive factories are at Hoboken, N. J., with warehouse and office in New York, and branches in Chicago, St. Louis and San Francisco. A visit to their factory (Fig. 1) shows the very latest and most improved appliances for making all kinds of tapes, and a most perfect arrangement for standardizing tapes and securing their utmost correctness. Keuffel & Esser Co. make a very large variety of tapes for many purposes, although the bulk of their manufacture is of the usual steel and metallic tapes, such as are carried by the Hardware trade. Besides they make narrow tapes up to 1,000 feet long for city, railroad, mine and bridge engineering and for surveyors; also the

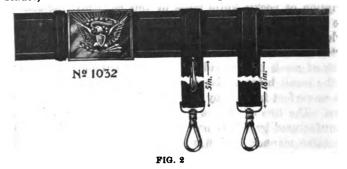

LILIPUT MEASURING TAPES.

so-called band chains, which take the place of the former surveyor's link chains. Their latest production is a miniature steel tape (Fig. 2), made in 25 and 50 feet lengths, and either in 1-10 or 1-12 of feet, which they aptly call the Liliput. The Liliput will be appreciated by those who have frequent use for a tape, and wish to carry it constantly with them on account of its small size and compactness, being about half the size and weight of the well-known Cornell Steel Tape, manufactured by Keuffel & Esser Co., and of the same quality, workmanship, durability and accuracy. The Liliput is made of steel, 1/4 inch wide, in 25 and 50 feet lengths, with stout bent leather case, double-folding flush handle to push open from opposite side, nickel-plated mountings, and is fully warranted. The 25-foot Liliput measures 21/4 x 1/2 inch and weighs complete with case 31/2 ounces. The 50-foot Liliput measures 23/4 x 1/2 inch and weighs complete with case 5 ounces. We would recommend to our readers the catalogue and price lists of Keuffel & Esser Co., as they would certainly be interested.

Boy's Sword and Belt.

Ames Sword Co., Chicopee, Mass., are bringing to the attention of the Hardware trade, who are on the lookout at this season of the year for specialties adapted for holiday sales, what will undoubtedly prove a very taking novelty.

and belts of this kind have never before been offered to the trade for household use. We present illustrations of the two styles, which show the sword and belt. The sword (Fig. 1) is made with emblematical hilt, black twist grip, plain steel blades, and with an embossed nickel-plated steel scabbard,

the mountings of which are either brass or gilt, as may be desired. The blades are 22 inches long, the total length 27 inches, and the belts (Fig. 2) are furnished 30 inches long with outlet unless waist measure is given with order. There is no doubt but what these will prove very popular additions to the original novelties that will be brought forth for the coming holiday trade. Special efforts are being made by a number of manufacturers to add largely to the list, realizing that the forthcoming season is apt to be one in which more money will be spent than usual, the prosperous conditions of the country justifying the outlay.

American Tea and Coffee Extractor.

The Buffalo Mfg. Co., Buffalo, N. Y. (Neal & Brinker, New York), are placing upon the market through the Hardware and house furnishing goods trade the American Tea and Coffee Extractor, patented by Dr. J. G. Van Marter, which has met with unqualified approval wherever introduced. We give an illustration herewith, which conveys a correct idea

AMERICAN TEA AND COFFEE EXTRACTOR.

of its appearance on the table when in use. The reservoir and top, lamp, etc., are made from highly finished copper, nickel-plated throughout, the reservoir being perfectly tinned inside to increase its cleanliness and length of service. The

FIG. 1.

They have long been manufacturers of regulation swords and sword belts, and these they are producing in smaller sizes suitable for boys' use, being an exact copy of the line and staff swords and mounted officers' sabre as worn by the officers of the U.S.A. This is something entirely new, and swords strength of the berry is extracted by a scientific process, an arrangement which results in producing the best results and it is claimed will prevent the incorporation in the product as made of any of those deleterious constituents which overstimulate or irritate the nervous condition of the drinker.

The "Crescent" Household Specialties.

Crescent Mfg. Co., Fremont, O., are placing before the Hardware and House-furnishing trade a large line of house-hold specialties well adapted to become popular sellers wherever introduced. Among those recently added to their long line, we present herewith illustrations of three of them. The

Mantles for Gas and Gasoline Burners.

Now that the lighting season is in full swing, the retailer will need to lay in a stock of mantles for incandescent gas and gasoline burners. Many Hardwaremen are handling this class of lamps to considerable advantage, and the attention of all such is directed to the advertisement of Neuhauser & Co., 226 Washington Street, Chicago, which appears elsewhere in this issue. The manufacture of mantles has made steady progress for some years, and nowhere has this progress been greater than in America; indeed the American mantle is displacing the German even in Europe. One Chicago house

FIG. 1.

first under consideration is the "Crescent" Screw Driver (Fig. 1), the blades of which are forged from very tough grade crucible steel. They are very handsomely finished with rosewood stained handles, and are French polished, the blades being finely nickel-plated, making them one of the most attractive Screw Drivers at a popular price now on the market. They are made in three salable sizes, 6, 7 and 8 inch. They

has a steady trade in Vienna, Austria, and along the Mediterranean, while shipments to South America and Mexico are matters of daily routine. The American mantle of to-day has been developed in response to public demand until it is not by any means the fragile thing it used to be. Neuhauser & Co. call special attention to their XXX Ray mantle and claim that it is the strongest on the market, will give the

FIG. 2

also manufacture the Butcher and Family Steel, an illustration of which we give (Fig. 2), which are claimed to be in point of quality and finish equal to the best imported steels now sold in the Hardware trade. The blades are forged from the finest carbon steel, especially hardened for the purpose for which they are designed, and are hand cut. The handles are made from hard wood, finely finished with a French polish. They are made in the regular sizes of 10, 12 and 14 inch, and

most light and will shrink the least. They have other lines which are also satisfactory and will give good service at lower prices. Dealers carrying these goods should write them when in the market for fresh supplies.

Improved Clipping Machine.

The new 1902 Model Horse Clipping Machine (Stewart's patent), of which we give an illustration herewith, is simple, strong and compact. It has a large wheel which is machined

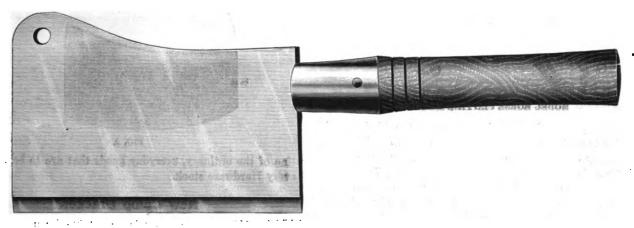

FIG. 8

being fully warranted as to quality, will undoubtedly be welcomed by the trade as an article that will prove exceedingly popular. One of their latest productions is the Family Cleaver, which we illustrate in Fig. 3. They have a highly polished steel blade six inches long, four and a half inches wide, being the most desirable style for kitchen purposes, and of a proper degree of weight. They are finished with apple, wood handle, the blade being fastened to the handle with long closed-end ferrule. The catalogue representing the production of the company should be in the hands of all our readers handling this class of goods, as there are so many desirable goods, as may be inferred by reference to their advertisement in our present issue, that would be found suitable for any stock of Hardware in the country.

all over with edges and periphery turned true and with teeth milled from the solid metal, engaging with a hardened steel cut pinion. The pinion shaft is provided with a turned, and absolutely true balance wheel, weighing two pounds, which revolves at a great speed, completely equalizing the motion. The opposite end of the pinion shaft carries a quarter turn box, completely closed and dust proof (the revolving parts of which run constantly in oil) to which flexible shaft is attached. It has a fine, strong grank handle; the base is exceedingly rigid and strong, insuring a steady standing machine, and permitting the operator to turn with either right or left hand, a feature entirely unique in a clipping machine. When the operator turns the grank handle of the drive wheel he knows that his effort is put to useful effect, while with the

STANLEY RULE & LEVEL CO.

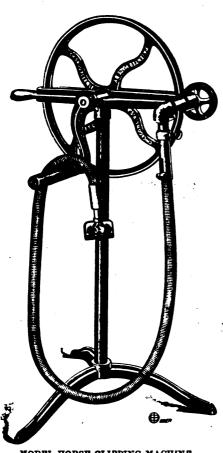

NEW BRITAIN, CONN., U. S. A.

Improved Carpenters' Tools.

BOLD BY ALL HARDWARE DEALERS.

old style belt machine a certain percentage of the power is claimed to be lost by reason of the belt slipping. The 1902 model is furnished with a single balance pressure knife, one that must under any and all conditions keep an eyen, unvary-

ing or scalding the hand. As it is understood that aluminum absorbs heat in a very rapid manner, these kettles are made

MODEL HORSE CLIPPING MACHINE.

ing and equally distributed tension on the blades. This machine is sold at the very low price of \$10.75 and is manufactured by the Chicago Flexible Shaft Co., La Salle Avenue and Ontario Street, with branch offices at 97 Chambers Street, New York, and 6 Denman Street, London, S. E., England. The company have just issued a new catalogue, illustrating everything new in this line. They state they will send it free to any Hardwareman on request.

Aluminum Tea Kettle.

Wagner Mfg. Co., Sidney, O., who are represented in New York City for Eastern and export trade by Neal & Brinker, 18 Warren Street, are placing upon the market a number of specialties in the shape of aluminum hollow ware and kitchen utensils, one of which we show herewith, the two cuts illustrating a tea kettle, the lower part of which (Fig. 1) is a one-piece casting of pure aluminum. The same utensil is represented in Fig. 2 showing admirably one of the special advantages in automatically raising the lid. On one side of the lid, which is also cast in one piece, is a projecting arm, which is placed at a proper angle, so a downward pressure of the wood handled bale raises the lid for refilling the kettle either at the faucet or when upon the stove without the risk of burn-

FIG. 1.

only in one style, that of flat bottoms, but of the several sizes, 6, 7, 8 and 9. They are meeting with a large and extended sale, and have proved exceedingly popular when added to a

FIG. 2.

line of the ordinary, everyday goods that are to be found in every Hardware stock.

New Lamp Bracket.

Flexibility of adjustment is its notable feature.

A pendant adjustable incandescent lamp gas fixture, having all the flexibility of a flexible cord incandescent lamp support, has recently come into extensive use in England, says the Philadelphia Record, where it was first brought out. It has two movements, one vertical and the other horizontal. By the combined adjustment of the two, it is possible to suspend the incandescent gas light just at the most convenient point for comfortable reading. When not in use, the bracket can be swung back over a table or out of the way, and when wanted, it only takes a second or two to make the adjustment. The movement is so easy that there is no danger of injuring the delicate incandescent mantle by jarring.

She— So she refused you?

He—Yes, she said she didn't have the heart to marry me.

REVIEW OF THE MARKETS.

Wire Nails: While a favorable demand continues for this leading staple, the market on Wire Nails is to some extent unsettled, owing to the quotations given by some of the outside sources of supply. While the standard quotations remain the same as far as the mills are concerned, sales have been made in many instances at prices five to ten cents a keg below these quotations. The customary differentials between jobbers and retailers are not always strictly adhered to, as the competing mills are paying little attention to such distinctions. Quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in	carload lots	.30
• ••	less than carload lots	85
To retailers	in carload lots	40
••	less than carload lots	សា

New York: Under conditions referred to above, the smaller local demand for this season is favorable in price, even for limited quantities. Prices are about as follows:

Cat Nails: The Cut Nail manufacturers at a meeting held since our previous issue, reaffirmed October prices to rule during November. Owing to difficulty experienced by manufacturers in obtaining a full supply of nail plates, prompt deliveries of steel cut nails have been greatly hindered. Quotations remain as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

New York: Cut Nails have not been in full supply for some time, owing to inability to get mill orders filled promptly. The following quotations represent the local market:

Barb Wire: A slackening demand for Barb Wire is beginning to be experienced, as the season for distribution is gradually drawing to a close. The market is fairly well maintained by the jobbers, as no fear seems to be entertained of any material change in current quotations, which continue as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers	in carload lots, Painted	. \$2.60
44	" Galvanised	. 2.90
44	less than carload lots, Painted	. 2.65
••	" " " Galvanised	. 2.95
To retailers	in carload lots, Painted	. 2.70
To retailers	in carload lots, Galvanized	. 8.00
To retailers	in less than carload lots, Painted	. 2.80
	in less than carload lots Galvanized	

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named.

Plais Wire: Large orders are not being given at present for Plain Wire, the demand for which continues fairly good, representing immediate requirements. Quotations continue as previously given: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

	-	•		-
To jobbers in o	carload lots.		\$2.25	\$2.65 2.70
" 1	ess than car	loed lots	2.30	2.70
To retailers in	carlots		2.85	2.75
**	less than c	arload lots	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Pla	in Fenc	e Win	Adva	nces	(Cat	tch W	elghts)

Cordage: While there have been no changes in the market quotations for Sisal and Jute rope, Manila still shows high values, with a limited demand in consequence of this strong feature of the market. The following quotations represent present business:

	Cents
Manila, 7-16 inch and larger	 . 18
% Inch	 . 1814
1/2 inch and 5-16	 . 14
Sisal, 7-16 inch and larger	 91/4 944
& inch	. 944
inch and 5-16 inch	 . 101/4
Lain Yarn, medium and coarse	 . 844
Jute Rope, No 1	 101/4 81/2 61/2
No. 2	 . 6

Linsced Oil: The following quotations are the latest announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels...... 66 cents per gallon. In lots of 5 barrels or more...... 65 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw. Calcutta Oil, 85 cents per gallon.

THE PHILADELPHIA TRADE.

November opens with business moving in a satisfactory volume, and the reports from the manufacturers—almost without exception—speak of rushing business.

There is still great difficulty in getting some lines of goods, some manufacturers being from four to five weeks behind on orders—in fact, we know of some who have not filled orders which we sent them six months ago—and we have a recent line of goods in mind on which we were obliged to decline to make any quotations whatever, simply for the reason the goods could not be furnished.

While this state of affairs may not be very satisfactory to those who want goods, still, it betokens an active state of trade throughout the country, and one in which all probably share to advantage.

Reports from the West are still glowing, as prices of farm products are high and the farmers are doing well.

The market seems to be in a very firm condition, and we frequently hear of advances in prices, the latest being an advance on Barn Door Rail.

It is claimed that many goods are now too low in value, and, with the large part of the steel output already pledged for next year, many manufacturers claim that lower prices would not be justified by the situation.

The outlook for the remaining two months of the year is bright, especially in view of the fact that very few cold weather goods have been sold, and if the temperature should fall, all the trade in these lines can be squeezed into the next six weeks.

Our immediate need, however, is for rain, as there has been no rainfall for about three weeks, and the farmers are getting anxious.

BIDDLE HARDWARE Co.

THE PITTSBURGH TRADE.

November opens with a very good amount of business moving. Mild weather held on until the 4th inst., but at this writing we are having rain, so that the break has probably come and more seasonable weather will bring a stronger demand for cold weather goods. The over-crowding of railroad facilities is an index of the condition of business. Coal and iron cannot be taken care of fast enough, and shippers get half the number of cars needed. Delay in delivery of smaller shipments is annoying, but not so serious as actual loss of business in the larger interests. Retail merchants should understand these conditions and not blame their wholesale house when goods fail to reach them promptly. If we were running the railroads, the retailer would have his goods first,

no matter who had to wait. Collections are good; more customers taking advantage of cash discounts than ever before.

Logan-Gregg Hardware Co.

THE CLEVELAND TRADE.

The increased demand for iron and steel is a surprise to those who predicted lower prices in December. It is hard to realize the great change that has come to the country; it came so rapidly. Most of us realize that in our immediate section prosperity reigns, but that it is universal we are slower in perceiving. The farming population on which our city prosperity depends, has been so prosperous that something more than speculation in city lots is behind it all. The demand for goods does not arise from speculation, but it is made from consumers. Jobbers and manufacturers are pushed their utmost and are unable to furnish many goods that are asked for. Many orders taken six months ago are unfilled, and new orders are refused if shipment is specified unless the date of shipment is far in the future.

Prices might be advanced and would be only that the combinations steadily refuse to advance prices. Conservative business men feel like congratulating them for this.

The break in delivery caused by the strike will be bridged by time and the demand supplied without checking it.

If combinations can steady prices at both ends, they will prove their usefulness, and if they show that they have a majority of brains as well as money, we can rest easy.

The writer once heard Mr. Emerson use the for this in a lecture. When his daughter corrected him, he replied, "I am right; it is the country." A few more years like 1901 will make this country the country, as he said it was.

THE LOCKWOOD-TAYLOR HARDWARE Co.

,THE DAVENPORT TRADE.

Good roads, perfect Autumn weather, high prices for farm produce, especially of live stock, all conspire to make the path of the Hardware dealer smooth and pleasant now. While there is no boom and no undue excitement of any kind in the trade, there is a large amount of goods being sold in a very quiet and satisfactory way.

SICKELS, PRESTON & NUTTING Co.

.. THE ST. PAUL TRADE.

On the 4th inst. the weather suddenly changed from soft, balmy, to very wintry, the mercury dropping to 7 degrees above zero. This is unusual with us and causes a great stimulation in certain lines of goods. It's strange but true that while our people know positively that we will have sharp weather sooner or later, many people wait until it arrives before they will fix themselves out with stove, pipe, etc., so this cold snap makes orders for such goods very plentiful and all in a rush. We are well satisfied with conditions as they are. Orders are good. Money is coming in fairly well and prices are upheld.

C. W. HACKETT HARDWARE CO.

THE GRAPHITE TRADE.

There is not much to say about trade other than what we have been saying for many moons past. Trade in all lines of graphite productions continues to be all that one could ask for, and the words "Rush," and "Why don't you ship our order?" are as frequent as ever, and if they are less heart-breaking it is only because we are getting "manured" to them.

We have lately bought property 50x100 feet and shall tear down the buildings thereon and put up additions to pencil and crucible factories.

We have thrown out a new line among the automobile users and manufacturers, and are pulling sufficient new business to warrant the effort. Graphite preparations are equally suitable for gasoline, steam or electric automobiles, and its use brings many surprises. One man wrote us he would as soon think of going without water as without Dixon's graphite.

JOSEPH DIXON CRUCIBLE CO,

THE SANFRANCISCO TRADE.

The consensus of Hardwaremen's opinion is, taken all in all, that the present year is rounding up one of the best that the farmers have had for some time, and the city trade reflects this prosperity in a brisk commerce, both local and foreign. Among the considerable number of members of the trade that have severally expressed themselves in these early November days, there has been heard to say, not one Hardware dealer, that the present year is not so good in a business way as was 1900; as a matter of fact the year's trade condition talk of the week, generally speaking, dovetails with that of S. J. Dean, a Market Street Hardware and mechanics' tools dealer, who on the second day of the month responded to the Hardware correspondent in these words:

My business has run along through the year without any irregularity, the five or six months' labor union disturbances and strikes to the contrary notwithstanding, and my increase to date over that of last year is about twenty-five per cent.

The trade is pleased to report more promptness in deliveries now, mentioning nothing in the complaint line excepting a bit of annoyance on account of behindedness of mills in sheet steel shipping.

A. L. Scott, of Miller, Sloss & Scott, has returned from the Cleveland convention of the National Hardware Association, highly pleased at having been in attendance and feeling that the benefit and inspiration derived was well worth the long journey. He expressed one incidental regret, however, at finding so much accumulated work awaiting him as to forbid his responding to the invitation of the San Francisco and Oakland Retail Hardware Dealers' Association to address their meeting next week.

INDUSTRIAL PRESS ASSOCIATION.

Sacrifice money rather than principle.

New England Hardware Dealers' Association.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, November 13, at 5 o'clock P. M., dinner being served at 5:15 o'clock. At the business meeting, which will take place immediately after the dinner, the Association will have as their guest Congressman Samuel L. Powers, of Newton, who will speak upon "The Typical American." James W. Calderwood will favor the company with some fine vocal music. The Entertainment Committee consists of D. Fletcher Barber, Boston; D. L. Billings, Dorchester and James A. Farless, Boston.

Concert-Giving Cats.

How the Hardware dealer heads them off.

"There are various kinds of catguards," said a dealer in Hardware and kindred supplies, "but this is what we sell most of;" and the sample he showed was a section of a guard that is made in yard-long lengths and consists of a board strip three inches wide, surmounted by a top of zinc bent in the form of an inverted trough and with its lower edges nailed to the sides of the board strip. The zinc has at regular intervals of an inch or two along its ridge holes through which project foot-long spikes. This guard is nailed on top of a fence.

"It is not necessary," the Hardwareman went on, "to put the catguard along the whole top of a fence, but only at the points of approach; that is to say, at places where the cat can get at the top. Even the spryest cat cannot go right up the sheer face of a high fence, and so along such a section you don't want the guard; but you do want it, for instance, at the corners where a cat could approach your fence along some other; and here you want it for a little distance along each angle.

"This discovery was made for himself by a customer of ours who put a section of the guard across the end of his back fence where the end of the next yard fence joined. This section of guard projected out a foot and a half on either side clear of the top of his fence, and it seemed impossible for any cat to get around that. Nor could any cat get around it, but the day this guard was put up a cat came along the top of the neighbor's fence, halted at that formidable new barrier, and looked it over carefully for a moment, and then softly jumped over it.

"That's why at fence angles we put up a strip along the top of each of the fences running from the corner; the cat could jump over a strip placed simply across its path, but it can't jump over three feet of it placed lengthwise on top of a fence.

"Then people put it up on fence tops away from corners wherever there is an approach to any particular spot from the other side, other than along a fence; as, for example, along bars running from fence top to fence top across the neighboring yard, such as clotheslines are attached to. Or there may be in the next yard against the fence at some point. a flower stand, or some other object that would afford the cat a means of approach; if so, you place a section of the guard there.

"In fact, the cat may reach the top of your fence in various and unexpected ways. And our customer who told me of his experience with the cat that had easily jumped his first erected guard said that he had found it an interesting study to observe the several ways by which the cats had reached the top of his fence, some of these being quite unlooked for, and he had found then a further and far greater pleasure in planning such arrangements of the cat guard as would serve effectually to keep them out, which he had finally succeeded in doing.

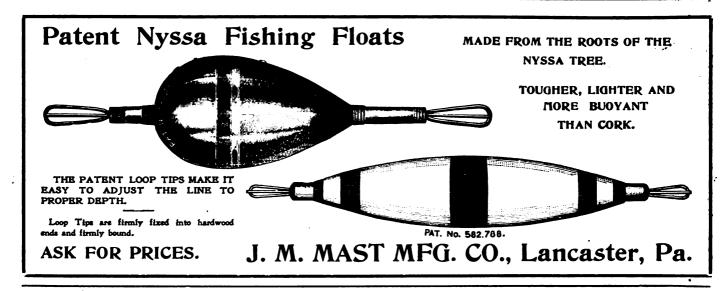

"There is, indeed, no doubt that with this guard properly placed you can keep the caterwauling cat off the premises, and there is demand enough for such things to make cat-guards in one form and another regular articles of sale in city Hardware stores."—N. Y. Sun.

New Tire and Rim Cleaner.

Cyclers who live in city houses are generally compelled to store their wheels in the house, which means that there is a great deal of dirt to be cleaned up after them, even on dry days, and in wet weather if a cycler is caught out in the rain the dirt is worse than ever.

Often there is not sufficient time to wipe off the wheel, and the mud is left to dry and fall off the first time the bicycle is moved, but if every cycler would provide himself with a machine recently invented, the time required to clean the wheel would be small and the satisfaction of having a clean wheel correspondingly great.

In operating the device one of the wheels is dropped on two rollers, one of which is connected with a crank by a chain. Upon turning the crank the wheel is rotated, with the tire and rim between stationary brushes, and the mud and dirt quickly removed. The brushes are made adjustable to fit tires of different sizes, and a cleaning wire is arranged to be swung up by the foot against the tire, in case the mud is so thick as to render its aid advisable. A pocket is arranged to catch the dirt as it falls from the tire, and this may be inverted for emptying. Thomas L. Barlow, of Boston, Mass., is the inventor.

Dobbs—You ought to do something for that cold of yours. A neglected cold often leads to serious consequences.

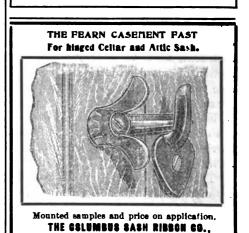

Mobbs—This one isn't neglected. Four or five hundred of my friends are looking after it.—Ex.

Edith—Freddy and I have been engaged for a month and nobody suspected it.

Ethel— No; everybody thought from his looks that he'd been playing the races.—Ex.

the value of newspaper advertising because every day shows more and more plainly the desire of newspaper publishers that advertisers shall have the best service in their power, and because the merchant more and more feels the necessity of getting out of the space used full value for what he paid for it. . .

The Acme of Perfection is the "Challenge" Stove Drum.

The Only Product on the Market which can be Thoroughly Cleaned from Top to Bottom Without Removing the Stove Pipe and Soiling the Flooring.

Soot Being a Non-conductor of Heat, the Drum Must be Thoroughly Clean to get the Best Results. THIS THOROUGH CLEANLINESS ONLY BEING POSSIBLE IN THE "CHALLENGE."

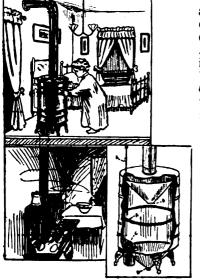

Fig. A. Coil Scraper for cleaning sides and

Fig. E. Rod by which Scraper is operated. Fig. B. Opening in upper cone to release cumulated ashes and soot.

Fig. C. Shield to prevent ashes and soot from failing into the stove pipe below.

Fig. B. Screw cap opening at bottom of lower cone for the release of all ashes and

In all the old style drums it is necessary to first take down the pipe and drum to clean it, making endless soot and dirt. The "Challenge" overcomes this difficulty in a very simple manner. The bottom of the drum is shaped conical, with a screw cap at its lowest point. (Fig. D) A wire coil or scraper, (Fig. A), extends around the drum on the inside in a circle with a rod, (Fig. E) attached, extending through the top. To clean, it is only necessary to put a pan under the drum, push the rod up and down a few times, which scrapes all the soot from the sides and top, and allows it to fall to the center of the cone-shaped bottom. Then remove the screw cap, (Fig. D), and the soot and ashes all fall into the pan placed to catch it. pan placed to catch it.

Any practical stove man knows that the soot on the sides of the drum cannot be removed without being scraped off. The only soot and ashes removed by other cleanouts is what might fall to the bottom and it would not be necessary to remove this at all, as a drum never heats

from the bottom, but from the sides and top.

We guarantee that this drum will heat more than double the amount of space heated by any other drum.

HARDWARE MANUFACTURERS' RECORD.

If rdware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Ashtabula, O.—Geneva, this county, is to have a new industry which will employ 200 men before the Winter is over. Both lights and measures will be manufactured by the Gravity Self Measure and Light Co.

Bessemer, Ala.—J. G. Newbegin, a wealthy manufacturer of Blue Bend, Ill., has purchased a tract of land in Bessemer and will shortly erect a \$25,000 plant for the manufacture of wheelbarrows.

Canton, O.—Climax Vapor Lamp Co. has been incorporated. Capital stock, \$10,000.

Chicago, Ill.—Lang Cutlery Works has been incorporated; capital stock, \$25,000. Incorporators, B. B. Lang, E. H. Byers and M. A. Lang.

Cohoes, N. Y.—Peck Edge Tool Co. has been incorporated; capital, \$75,000. Directors: Frederick W. Peck and Eleazar A. Peck, Cohoes; John H. Quimby, New York City.

Detroit, Mich.—The Peninsular Tool Mfg. Co. has been incorporated with \$25,000 capital. Incorporators, Norman F. Roadhouse, Celenus L. Burr, L. George Rakeshaw, Arthur L. Bresler, Eugene A. Bresler, and George Rakeshaw, trustee.

Erie, Pa.—John A. Lang, R. T. McClure, H. E. Fish, John Jordan, of Sharon, and C. F. Williams, of Ellwood City, have formed a company and are about to apply for a charter for the incorporation of an establishment for the purpose of manufacturing tools of different kinds, especially machinery tools. The capital will be \$60,000. The company will probably locate its works along the Lake Shore tracks west of this city.

Frankfort, Ky.—Articles of incorporation have been filed for the Gate City Stove Works, which company will have this city for their headquarters. They will manufacture the Wilson-McCloskey Gas Stove and put large numbers of them on the market in the near future. Of this new company, Coon Kinner, of Kinner, Ky., is president, C. F. Wilson, general manager, and James P. McCloskey, secretary and treasurer.

Louisville, Ky.—The Louisville Shovel Co. yesterday opened its work at Floyd and Lee Streets. The company owns its own site, covering about three acres. Its buildings are of brick, and are equipped with the most modern machinery. The plant's daily capacity is 150 dozen shovels, and in addition to this, a large number of spades, scoops, rakes and forks will be turned out daily. About 100 workmen are employed. The officers of the company are well-known Louisville business men, and consist of the following: J. P. Ouerbacker, president; Harry Klapheke, vice-president. These gentlemen are connected with the O. K. Stove

Co. The secretary and treasurer is D. hundred and fifty men will be employed.

Davis, of D. Davis & Son.

The company expects to manufacture plated

Milwaukee, Wis.—A new plant is about to begin operations in Milwaukee, in manufacturing lathes, tools and machinery of all kinds. The firm is styled the Milwaukee Machine Co. Articles of incorporation have been filed by C. Edwin Search, Edward Cheshire and Frederick W. Weis. The capital stock is \$50,000.

New Castle, Pa.—The New Castle Forge and Bolt Co. has purchased five acres of ground and will at once begin the erection of a plant for the manufacture of shafting, nuts, bolts and rivets. The company has a paid up capital of \$75,000, which will be doubled. The following board of directors was elected: Frank Ryman, of Pittsburgh, for eleven years with the Oliver Nut and Bolt Works; A. B. Whielden, of the Steel Car Forge Co., of Ellwood; W. H. Cox and T. F. Morehead, of this city, and J. C. Roberts, of the Pressed Steel Car Co. Work on the buildings will be begun at once and it is said the plant will be in operation in ninety days. It will employ 250 men and boys.

New Orleans, La.—The charter of the Standard Pulley Co. has been filed in the Mortgage office. The capital stock is fixed at \$25,000, and it is the largest concern of the kind south of the Ohio River. The officers are: P. H. McArdle, president; B. T. Patterson, vice-president; O. H. Van Horn, treasurer; W. B. Ramsey, secretary.

New York, N. Y.—Criterion Gas Stove Mfg. Co. has been incorporated. Capital, \$20,000, and directors: Herman Kroesel, Louis Silverman and F. R. Kinkelin, of New York City.

Pittsburgh, Pa.—American Nut and Bolt Fastener Co. will soon apply for a Pennsylvania charter to manufacture a patented product in or near Pittsburgh. The company will start with \$50,000 capital. The incorporators are Milton Bartley, Harvey Bartley, S. E. Moore, George R. Pearson and Robert M. Hamilton.

Portland, Me.—American Safety Razor Co. has been organized for the purpose of manufacturing razors and razor blades, \$500,000 capital stock. The officers are: President, King C. Gillette, of Brookline, Mass.; treasurer, Jacob Milborn, of Brookline, Mass. Certificate approved Oct. 11, 1901.

Saltillo, Tenn.—Wakefield & Orr are putting down at Sibley an axe-handle factory and will be ready for operation soon. This enterprise will give employment to several men, besides opening a market to the holders of timber, in which there is some of the best hickory in the country, which is in large tracts.

The officers of the company are well-known Louisville business men, and consist of the try is the Sistersville Novelty and Cutlery following: J. P. Ouerbacker, president; Co. A plant is now in process of construction, and is expected to be in operation withtlemen are connected with the O. K. Stove in sixty days. It will cost \$30,000. One

hundred and fifty men will be employed. The company expects to manufacture plated ware of all kinds, including knives and forks, spoons, silver plated ware, etc. The projectors come from Beaver Falls, Pa.

Skowhegan, Me.—A large tract of timberland north of Mercer has been purchased by S. L. Marble and H. A. Kennison, of Springfield, Mass., who propose to erect a shovel handle factory on Sandy River, near Starks. There is a great quantity of white ash in the Sandy River valley, sufficient, it is believed, to provide timber for a factory that will turn out roo,000 dozen handles each season for a quarter century.

South Bend, Ind.—The Oliver Chilled Plow Works have filed new articles of incorporation, giving its capital at 500,000. The directors are James Oliver, Joseph D. Oliver and George Ford.

Topeka, Kan.—Topeka is to have a new industry, the manufacture of an improved stove-pipe collar and a flue stop. The exclusive right of manufacture is in the hands of the Goodwin Mfg. Co.

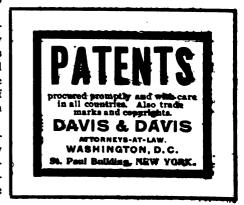

Changes and Improvements.

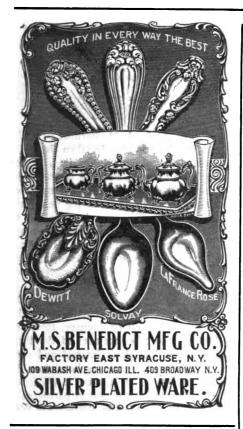

Cadillac, Mich.—The Cadillac Handle Co. has purchased twenty acres of land adjoining the site of the factory destroyed by fire several months ago and will begin building within a few weeks.

Canandaigua, N. Y.—Alex. Davidson has purchased the plant of the Robinson Chilled Plow Co. for \$5,000. It will be continued in operation and will eventually be enlarged.

Fair Haven, Conn.—Out of the ruins of the National Wire Corporation's plant are rising the walls of the building for the new plant. The destructive fire that visited the mill property last Winter wiped out the entire plant of the Wire Corporation and threw out of employment a handed or more mill hands, the majority of whom were residents in that section of the city.

Jersey City, N. J.—The receiver of the Spring Torsion Balance Co., George R. Beach, reported to Vice-Chancellor Stevenson at Jersey City that he had sold the company's plant for \$35,000 to Harold Keese, who was one of the stockholdera. The habilities of the company were \$300,000. It went into bankruptcy because of trouble among the stockholders.

every wise Hardware dealer to advoca

ONE IN

Because the customer who needs a lubricant,

Because the customer who needs a lubricant,
Probably could use a furniture polish handily.
Probably could find plenty of uses for a cleaner and rust preventative also.

3 IN ONE is a combination of these three.
It is devoid of the first particle of grease and acids.
So it never injures clothing; never gathers dust or mixes gritty; never runs gummy; does not clog the most delicate mechanism.
It is a clear, clean, fragrant, perfect lubricant—a lubricant that annihilates friction to a degree never attained by any other oil known.

For furniture it is a polisher plus.

For furniture it is a polisher plus.

It instantly removes tarnishes, stains, dirt; it brings back the freshness and brilliancy of the original finish; it blends scratches and bruises; it leaves no

It also prevents rust on all metals. It cleans fire-arms of powder scorching and all residue. It really cleans

everything.

Applied to saws, scythes, knives, any tools, nickel work—no rust or corrosion can live.

3 IN ONE is put up in a generous bottle.
It costs no more than your common, single-purpose, half-hearted oils.

How many more customers could you appeal to with a multi-purpose oil

Never a man or woman enters your store but needs 3 IN ONE. Isn't it self-evident?

The S. M. HOWES COMPANY, Boston, Mass.

The Acme of Perfection is the "Challenge" Stove Drum.

The Only Product on the Market which can be Thoroughly Cleaned from Top to Bottom Without Removing the Stove Pipe and Soiling the Flooring.

Soot Being a Non-conductor of Heat, the Drum Must be Thoroughly Clean to get the Best Results.

THIS THOROUGH CLEANLINESS ONLY BEING POSSIBLE IN THE "CHALLENGE,"

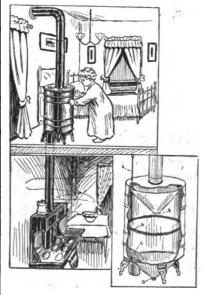

Fig. A. Coil Scraper for cleaning sides and

Fig. E. Rod by which Scraper is operated. Fig. B. Opening in upper cone to release accumulated ashes and soot.

Fig. C. Shield to prevent ashes and soot from falling into the stove pipe below.

Fig. D. Screw cap opening at bottom of lower cone for the release of all ashes and

In all the old style drums it is necessary to first take down the pipe and drum to clean it, making endless soot and dirt. The "Challenge" overcomes this difficulty in a very simple manner. The bottom of the drum is shaped conical, with a screw cap at its lowest point. (Fig. D) A wire coil or scraper, (Fig. A), extends around the drum on the inside in a circle with a rod, (Fig. E) attached, extending through the top. To clean, it is only necessary to put a pan under the drum, push the rod up and down a few times, which scrapes all the soot from the sides and top, and allows it to fall to the center of the cone-shaped bottom. Then remove the screw cap, (Fig. D), and the soot and ashes all fall into the pan placed to catch it.

Any practical stove man knows that the soot on the sides of the drum cannot be removed without being scraped off. The only soot and ashes removed by other cleanouts is what might fall to the bottom and it would not be necessary to remove this at all, as a drum never heats from the bottom, but from the sides and top.

We guarantee that this drum will heat more than double the amount of space heated by any other drum.

We have an interesting proposition to make dealers.

Write for particulars to-day as our offer cannot be held out very long. Manufactured only by

WESTERN TIN AND JAPAN MFG. CO.,

124-126 East Eighth Street, Cincinnati, Ohio.

ARDWARE BOOKS. RICE

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

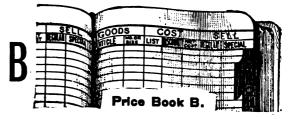

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. Size of page, 4 x 7 inches.

FOUR EDITIONS:

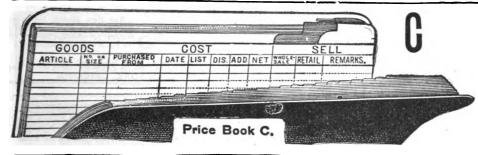

A, 200 pages, - \$1.00 A 2, 400 pages, - \$1.50 ▲ F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. Page, 4 x 7 inches.

FOUR EDITIONS:

B 2, 400 pages, \$1.00 B F 2, 400 pages with flap, 1.75 B F, 200 pages with flap, 1.25

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. Page, 4% x 8 inches.

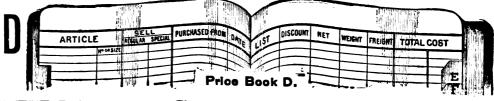

FOUR EDITIONS:

C, 200 pages, ... C F, 200 pages with flap, ... C 2, 400 pages, ... - \$1.00 1.25 1.50 C F 2, 400 pages with flap, .

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. Page, 5x8 inches

FOUR EDITIONS:

D, 240 pages, - - - - - - D F, 240 pages with flap, - D 2, 480 pages, - - - D F 2, 480 pages with flap,

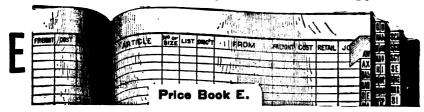

INDEX PRICE MULTIPLE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

AU For Augers, turn to CHU turn to For Chisels, For Iron, turn to IRO " Parers, Apple PAR " Cutlery. " Irons.

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

This device—as now made—has the following features which are peculiar to itself:

No packing friction.

A releasing device—especially useful on apartment house doors and doors that close against a draught.

Spring of polished clock steel of superior quality—ensuring soft and noiseless action and great durability.

The mechanism is arranged so that the spring cannot be used wrong side up and thus bent out of shape or broken.

The checking medium is an oil which is practically non-freezing, and which can readily be renewed when needed without removing the check from the door.

The Hon. Webster R. Walkley, of the Peck, Stow & Wilcox Co., at the recent election in Greater New York, was elected alderman of the Fifty-fifth District in the Borough of Brooklyn, by a very handsome majority. He has already served with marked distinction in the Brooklyn Board of Aldermen during the administration of Mayor Schieren, at which time he bore the palm for oratory in that municipal arena. Few measures affecting the interests of Brooklyn were brought before the board that he did not materially assist in perfecting, his love for participation in such labor being notably significant. Having a large acquaintance both politically and socially in New York and Brooklyn, and the fact that he represents one of the largest Hardware manufacturing concerns in the industry, gives him a personality that will promote him before many years to a larger field of political usefulness.

We publish on another page of this issue an excellent article on "The Radical Changes in Retailing Hardware During the Past Thirty Years." It was originally published in the *Michigan Tradesman* in the banner number recently issued. It is from the facile pen of that progressive Hardwareman, Henry C. Weber, of Detroit, treasurer of the Michigan Hardware Association.

The business of the Waterbury Farrel Foundry and Machine Co., of Waterbury, Conn., has entirely outgrown their present plant, and improvements are under way which will increase their output at least fifty per cent. A large brick office building is completed and the framework up for a fourstory brick addition to the machine shop. A new power house with brick stack will also be erected and a number of smaller additions made. New boilers will be installed and a complete electrical plant, as well as a large amount of new machinery.

The most important robbery of the post-exposition season occurred in the Liberal Arts Building at the Pan American Exposition a week ago. The booth which suffered was that of the Northfield Cutlery Co. When workmen arrived in the morning they found that the exhibit had been stripped of everything of value. Almost the entire exhibit had been carried away by the thieves. All the expensive pearl-handled pocket-knives had been taken, among the lot being a monster knife containing about 40 blades, which had been the feature of the display. The knives taken, it is thought, will total in value about \$1,000, being the most expensive and valuable in the collection. The robbers, it was evident, had worked with deliberation, picking out only just what was wanted and passing aside what proved at all bulky and not specially valuable.

Charles S. Lawrence, who has been abroad representing Tower & Lyon since October 2d, returned by the steamer St. Paul on the 16th inst. His time while away was fully occupied in the interests of this well-known house in establishing agencies in Great Britain for the many specialties manufactured and controlled by them. The foreign demand for the products marketed by Tower & Lyon has been increasing annually, until now it represents a very material portion of their steadily expanding output.

Owing to the many new lines taken on by the New Departure Bell Co., Bristol, Conn., it has been decided to change their name to the New Departure Mfg. Co. This company

has increased its plant and is extremely busy in what is usually a dull season. This change of name will take effect December first.

At a recent meeting of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership therein:

Sydney J. Robinson, Washington, Pa.
U. M. Fleischmann, 302 Broadway, New York.
Fred. Dietz, 60 Laight Street, New York.
John E. Dietz, 60 Laight Street, New York.
Bernard Naughton, 258 Broadway, New York.
Daniel F. McMahon, 258 Broadway, New York.
Thomas C. O'Sullivan, 258 Broadway, New York.
George W. McNulty, 258 Broadway, New York.
William E. Burke, 258 Broadway, New York.
James F. Schaperkotter, 26 Cortlandt Street, New York.

The Bronson-Walton Co., Cleveland, O., makers of Coffee Mills, Roasting Pans and Hardware Specialties, have moved into their new plant which has been building during the Summer. They have added new machinery which will double their capacity, and report having plenty of orders, compelling them to run a night force, although employing 100 men.

F. E. Myers & Bro., Ashland, Ohio, are now the owners of patent No. 674,966, dated May 28th, 1901, issued to J. H. Burkholder, for improvement in door hangers. This, in connection with prior patents issued to them, prompting the introduction, undoubtedly places them in a position to control the Flexible and Stayon feature embodied in the Myers Stayon hanger, which is becoming exceedingly popular, having developed into a very extended business; in consequence, they propose to protect themselves and their dealers and will give exclusive agencies.

On December first the Boston and Lockport Block Co. expect to remove their Boston office and stock room from 142 Commercial Street to 160 Commercial Street, where they are fitting up new apartments to better accommodate their increasing business. The first floor will be occupied entirely by offices, and the remaining four floors for stock. It is their intention to carry a full line of trucks and platform wagons, which are manufactured at their factory at Lockport, N. Y. They also intend to carry a large line of Batt's Chain Hoists, Wire Rope Blocks and such other Blocks as would be needed by railroads, contractors and others for emergency cases. They will carry a large line of pumps, and will as far as possible transfer their shipping department for express shipments from their East Boston factory to Commercial Street, thus saving about a day in time. A telephone exchange will be installed with two receiving instruments instead of one, so that when one line is "busy" another may be called. They are hard at work on their 1902 Catalogue, which they hope to have ready for mailing about the first of the year. This will be the largest and most complete Block catalogue ever published, and they are prepared to take orders for same to be sent free to any interested party as soon as received from the

In 1643, John Winthrop came from England with the necessary skilled workmen and erected a foundry at Lynn, Mass., and the first article made from native ore was cast in this foundry in the shape of a small iron pot holding a quart.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

Business continues remarkably good. Prospects for the closing of the year prosperously were rarely better. Preparations for the holiday demand, which promises a fullness in the way of purchases, especially of high-grade goods of merit, are surprising to the veteran dealer, and the Hardware stores during the Christmas season particularly, will present elements of attraction to the general public that must command admiration for the various articles of utility offered for sale—articles of merit that will open the buyer's heart and, what is more important, his pocket-book.

Orders are coming in strongly to the jobber from the territory covered by his salesmen for such Spring delivery goods as are usually looked after a month or more later. But prices are so low by comparison that orders are given more freely than usual, in order to place requisitions early with the hope of delivery on time at dates specified. This early booking of the retailer's wants inspires the jobber to forward to factory large orders covering the several lines of Spring stock, while quotations may be had at the present level of the markets. There is a feeling in the trade that prices will advance on many lines of goods, and that goods will be difficult to obtain from factory when Spring arrives, unless specifications have been booked months ahead. Manufacturers are compelled to pursue the same plan, for the knowledge is patent that orders for raw material have already been entered for delivery in the early months of next year, that will make it difficult for late comers to meet conditions so favorable to a successful trade, without paying bonus prices for a satisfactory supply. It won't be the fault of the buyer for the leading jobbers if a large stock of prominent specialties will not be amply provided for; and the jobber with the stock to deliver will deserve his active business.

Just at present the sudden coming of cold weather, accompanied by snow in many instances, has created earlier than usual a lively demand for Winter requirements. The business in skates, sleds, snow shovels, ice chisels and stove supplies generally has been an active one, orders having been freely forwarded and the stock in the hands of the jobbers materially lessened. This, with the stimulus from holiday business wants, has made an unbroken successful business not always a feature of late November trade.

An effort will be made in several quarters to lay in a larger stock of the ordinary tools required usually in a Hardware stock, great difficulty having been experienced this season in obtaining full supplies of Disston's saws, Maydole hammers and other well-known special makes, usually in ample supply.

The demand for Builders' Hardware continues good. The several wire nail plants which have sprung into existence since the organization of the American Steel and Wire Co., are compelled to name prices lower than those obtained by the controlling company, in order to dispose of their product. This will always be the case, although the fact that their combined output is a mere bagatelle compared with the gross consumption of the country. The American Steel and Wire Co. have a manufacturing capacity sufficient to supply all the wire nails used in the United States, but this fact, although well known, does not discourage the formation of competing plants, as long as the margin of profit admits of a cutting of price, but as long as the demand leaves no surplus product in the mills of the big company, it is unlikely that any change in current prices will be made to lower the quotations which have for so long a time held the trade free from speculative purchases.

Reciprocity Treaties and Agreements.

The special interest in the reciprocity history of the United States awakened by the discussion which has been in progress here during the week suggested to the Treasury Bureau of Statistics a concise presentation of the history of the reciprocity treaties and agreements which the United States has had in the past, those now in operation, and those awaiting action by Congress.

The list of reciprocity agreements since 1850 consists of:

- (1) An agreement made with Canada, which operated from 1855 to 1866, under which the United States admitted free of duty from Canada, breadstuffs, provisions, live animals, fruits, poultry, hides, skins and furs, ores and metals, timber and lumber, cotton, flax and hemp, and unmanufactured tobacco; Canada also admitting the same articles from the United States free of duty.
- (2) An agreement with the Hawaiian Islands existed from 1876 to 1900, by which the United States admitted free of duty sugar and molasses, and other tropical products of those islands, and they admitted free of duty breadstuffs, provisions and general merchandise from the United States.
- (3) The treaties made in 1891-92 under the Act of 1890 with Brazil; Spain for Cuba and Porto Rico; United Kingdom for the British West Indies and British Guiana; Dominican Republic, Salvador, Nicaragua and Guatemala in Cen-

tral America, and Germany, France and Austria-Hungary. Under these the United States agreed to admit free of duty sugar, molasses, coffee and hides from the countries mentioned, and in exchange for that privilege, those countries agreed to the following concessions on goods from the United States: Brazil, the free admission of wheat, flour, corn and oats, meal, starch, vegetables, hay, pork except hams, fish, cotton seed oil, coal, naval stores, agricultural implements, manufacturing and mechanical tools, engines, mining machinery and material for railway construction and equipment, also a 25 per cent. reduction in the duty on lard, hams, butter, cheese, preserved meats, fruits and vegetables, cotton manufactures, iron and steel manufactures, lumber, timber, wood manufactures, wagons and carriages and manufactures of rubber. With Spain, for the admission into Cuba and Porto Rico of the following articles free of duty: Meats, fish, wood for cooperage and building, wagons, carts, cars for railways, sewing machines, manufactures of iron and steel, oats and forage, and numerous other articles, also a reduced rate of duty on wheat, flour, and many manufactured articles. With the United Kingdom, for the British West Indies, an agreement similar to that above named with reference to Cuba and Porto Rico. Similar agreements with Nicaragua, Honduras, Guatemala, Salvador and the Dominican Republic. With Germany, the free admission of the following articles from the United States: Bran, flax, feathers, hides and skins, tan bark, also a large list of articles at a reduced rate of duty. With Austria-Hungary, an agreement similar to that with Germany.

(4) Agreement made in 1898, under the Act of 1897, with France by which the United States reduces the rate of duty on tartar, brandies, still wines and paintings, and France extends its minimum tariff rates to canned and prepared meats, also fruits, hops, timber and lumber in the United States. Similar agreements were also made in 1900 with Germany, Portugal and Italy. All of the recent agreements with France, Germany, Portugal and Italy are now in existence.

The pending unratified treaties from which the injunction of secrecy has been removed, provided for (1) the reduction of 121/2 per cent. duty on sugar, molasses, fruits and asphalt from the British West Indies and Guiana and the removal or reduction of the duty on a large list of agricultural products and manufactures entering those colonies from the United States. (2) A reduction of 20 per cent. in the duty on sugar, hides and certain grades of wool from Argentina entering the United States and a reduction in the Argentina duty on a large list of food stuffs and manufactures from the United States. (3) A reduction of from 5 to 20 per cent. on certain manufactures entering the United States from France and the application of the minimum tariff of France to most of the articles entering that country from the United States. In addition to these, there are pending treaties with Nicaragua, Ecuador, the Danish West Indies and the Dominican Republic, from which the injunction of secrecy has not as yet been removed.

The following statement shows the full list of the reciprocity agreements and treaties which the United States has made and put into operation since 1850, also those pending and unratified:

Death of Benjamin Franklin Errington.

Benjamin Franklin Errington died at his home at Clifton, Staten Island, on November 19th of pneumonia. Mr. Errington was born in Yarmouth, England, in 1822, and was consequently in the 80th year of his age. He came to America when quite a young man, and entered the employ of Harper & Bros., publishers, for some years, and made a most excellent record with that firm. Later, in connection with

BENJAMIN FRANKLIN ERRINGTON.

his brother George, he purchased a farm at Battle Creek, Mich., with the intention of making farming his life work. At that time Michigan was in its infancy and little explored, and wild animals were in constant evidence about the farm. In 1848 his brother-in-law, the late Alfred Field, who was one of the original founders in 1836 of the successive firms of Parker & Field, Parker, Field & Field, F. E. & A. Field, Field, Ibbotson & Co., and since 1862, Alfred Field & Co., prevailed on Mr. Errington to leave his farm and become connected with his firm, and continuously since 1848, a period of fifty-three years, he has occupied a prominent position with this old firm. In the old days prior to 1870, there was hardly a prominent jobber who was not familiar with the kind face and straightforward manner of Mr. Errington, and there was probably no man in the Hardware trade during these old days, who enjoyed a greater degree of respect and confidence among the trade than did Mr. Errington. time houses like William Bryce & Co., Walsh & Coulter, John C. Tucker & Co., Clark Wilson & Co., and scores of others, always addressed him by the familiar name of Frank, and Mr. Errington was never known to make the slightest misrepresentation, or by act, word or deed do anything that was different from the absolute facts. For the past thirty years he has been at the head of the Export Department of the firm, where by his geniality and kindly disposition he has secured the confidence and won the respect and love of all with whom he has come in contact, and on the day of his demise, there were many moist eyes in the establishment. The authority for the facts enumerated here has been intimately associated with Mr. Errington for forty-seven years, and is very happy

in bearing testimony to the fact that he was the most upright and pure minded man he has ever known. During all this long time he never heard Mr. Errington speak a word that could not have been uttered in the most cultured assembly. Such a thing as an impure thought could never get within contaminating distance of his pure mind. He was lovingly considerate of all about him, and always ready to ignore and efface himself, if by so doing he could bring help and sunshine to others.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. \$277 Broadway, New York City.

Construction of Will.

QUESTION.—A party died leaving a will, in which appeared the following clause:

"To my daughter * * * I give and devise my house and lot in which I now reside, * * * the house and lot to remain a homestead during her life, with power to will it to whom she desires at her death."

Is the daughter debarred under the will, from conveying or mortgaging this real estate, and if so can she institute any legal proceedings that will enable her to sell and give a good title, or mortgage the property?

REPLY.-In our opinion the daughter receives a life estate only in the house and lot in question, said house to be maintained by her during her life as a homestead, with a power to dispose of the house and lot at her death by will. The will particularly limits the power of disposition of the house and lot and requires it to be made, if at all, "by will to whom she desires at her death." The construction of this sentence taken in conjunction with the clause providing that the house shall remain as a homestead during her life, shows that the intention of the testator was to prevent the alienation of the property during the daughter's life. Under this construction of the will in question, the daughter would have no power to convey the property during her life, and we are of the opinion that the power in question does not authorize the daughter to . mortgage the property. We know of no legal proceeding that could be brought which would enable her to sell and give a good title or mortgage the property. Since, however, the power of disposition at the time of her death is given to her absolutely, we believe that a contract could be made by her, by which she would agree to devise the property in question at her death by will, to a certain person, and that this contract could be enforced after her death. If our construction of the clause is correct and the daughter takes only a life estate in the property, and she die without a will disposing of the property, the property would revert to the heirs of the donor of the original testator.

Contract to "Satisfy" Party.

QUESTION.—Some time ago I entered into a contract with an artist, by which contract he agreed to paint my portrait for me at the price of \$100. The portrait to be to my satisfaction when completed. The artist completed the portrait, which he informed me was a portrait of myself, but which in my opinion was extremely poorly done, and I therefore refused to accept the portrait or to make him any payment on the contract referred to. He threatens that unless I pay him the amount of \$100 he will at once institute suit against me to recover the same. Kindly advise me whether I am obliged to pay this sum or not.

REPLY.—We are of the opinion that upon the state of facts before us, if in good faith you were not "satisfied" with the portrait when it was completed, that you would not be obliged to accept it or pay the agreed price therefor. Generally speaking, there may be said to be two classes of cases in which the question as to whether or not a person has fulfilled a contract to the satisfaction of another arises. One class is where a person by his contract agrees to do some work which

appeals to the personal taste or sensibility of the individual with whom he contracts, and the other class of cases, in which he contracts to perform some work which is capable to be shown by mechanical demonstration to be a properly completed work. We are of the opinion that the case before us comes under the first class, and in such cases, if in fact the party is not satisfied with the work, he may reject it and is not liable on the contract. As to the other class of cases, we have several decisions in the State of New York holding that if the party should in reason be satisfied with the work performed and it can be demonstrated that the work is properly done, the law will presume him to be satisfied, and he will be liable for the contract price. The decision of the Massachusetts Courts upon this subject seem to indicate that even in matters of mechanical appliances if the party is acting in good faith, and declares that he is not satisfied, the contract cannot be enforced against him.

Attachment of Property.

Question.—Some time ago I delivered a stock of goods to a retailer in New York. I was aware at the time that I delivered the goods that this retail dealer was in rather poor financial condition. I therefore had him sign a contract by which he agreed to pay for the goods I was to deliver in installments. The contract also provided that the title to the goods should remain in me until the last installment should be paid. One installment was paid by the retailer, but before the second installment became due the sheriff levied an attachment upon the retailer's property and took into his possession all the goods which belonged to me, as well as the other property in the store belonging to the retailer. Kindly inform me what course I should pursue in order to recover my property.

REPLY.—If by the terms of the contract entered into between yourself and the retail dealer the title to the goods delivered by you to him was to remain in you until the payment of the last installment, and if the last installment under the contract had not been paid at the time the sheriff levied upon his property you are entitled to the possession of the property. In order to obtain possession of the property it is necessary for you to file with the sheriff who has attached the property what is known as a third party claim.

Industrial Growth of Connecticut.

The report of the Census Bureau on manufactures in Connecticut in 1900 shows a capital of \$314,696,836, invested in manufactures and mechanical industries in 9,128 establishments reporting for the State. This sum represents the value of land, buildings, machinery, tools and implements, and the live capital utilized, but does not include the capital stock of any of the manufacturing corporations of the State. The value of the product is returned at \$352,824,106, to produce which involved an outlay of \$12,286,050 for salaries of officials, clerks, etc., \$82,767,725 for wages, \$23,089,806 for miscellaneous expenses, including rent, taxes, etc., and \$185,641,219 for materials used, mill supplies, freight and fuel.

It is not to be assumed, however, that the difference between the aggregate of these sums and the value of the product is, in any sense, indicative of the profits in the manufacture of the products during the census year. The census schedule takes no cognizance of the cost of selling manufactured articles, or of interest on capital invested, or of the mercantile losses incurred in the business, or of depreciation in plant. The value of the product given is the value as obtained or fixed at the shop or factory. The value of materials purchased in partly manufactured form was \$144,809,525. The difference, \$208,014,581, is the net or true value of products, and represents the increase in the value of raw materials resulting from the various processes of manufacture.

She—I'm so glad it's to be platonic. At one time I was afraid you would propose.

He—So was I.—Ex.

RETAILING HARDWARE.

RADICAL CHANGES DURING THE PAST THIRTY YEARS.

Time is a great innovator. Human activity is the great author of change. Standing upon the threshold of the twentieth century, we look back in awe and wonder upon the marvelous changes which have been wrought in every sphere of action. Industry, science, literature—all have their place in the great march of Progress. Each day brings to light some new discovery, some new idea, some new development. The wise man of to-day is wiser than the man of yesterday, and he of to-morrow wiser than the man of today. The world and all that is in it is involved in a perpetual evolution. The crude printing press of Guttenberg has evolved into a huge machine which stamps intelligence upon millions of papers a day. The simple engine of Stevenson now is an immense and powerful locomotive that thunders down canyons and sweeps along the very edge of cataracts with wondrous speed. The insignificant light of the candle has been superseded by electric lamps of intense power. Change, change, and progress with every change, is the watchword that rings along the avenues of Time and is taken up to be repeated by every science, art, business and profession. It has been assigned to me to review the changes that have taken place in my own business, that of retail Hardware, and to confine myself to the last thirty years. This limitation permits me to write of my personal observation and, therefore, I accept it gladly.

Thirty years ago the Hardware business, judging it by comparison with its present development, was still in a crude state, and its gradual change for the better has been much like that of the uncouth, untutored youth, who, by the grinding stone of time, has been rounded out into a finished and polished gentleman. The Hardware business of the '70s was, perhaps, the most untidy of all mercantile branches. It supplied nearly every line of manufacture and trade, from the butcher, blacksmith and baker to the florist and farmer, and it dealt with articles so large and so small, from implements to penny nails, it was at once a store, a factory and a repair shop, and it was all conducted in so small a place that it was difficult to create order out of chaos.

Imagine a small store 20 feet wide by 100 feet deep lined from the front to the rear by shelving, combining unsightly paper packages of locks, knobs, casters, hinges and tools, with samples of each attached to the outside; a counter in front of the shelves, narrowing the space into a small aisle; the opposite wall decorated with shovels, spades, chains and iron, a narrow coop of 5 x 10 for an office and a trap door with a hand elevator near the front entrance where customers, stoves and heavy traffic all entered together. Then clog up the space with a few refrigerators and a few old-fashioned wood and coal stoves; put in a plow; scatter a few wagon jacks and wooden pumps here and there; then don't forget the scythe, grain cradle and hay forks and you have a picture of the ground floor of a typical Hardware store of thirty years ago.

There have been changes and radical changes; not only in the appearance of the store, but in the character of the business and the methods of doing it. I have only to look about in my store of to-day and reflect upon what it was thirty years ago to be impressed with the wonderful changes that have taken place in the retail Hardware business in general. The 20x100 feet have been succeeded by an immense floor space. The entire store has been divided into departments, the unsightly wall decorations have disappeared

and in their place is a display that is pleasing to the eye. The dim light of gas lamps has changed place with electricity. The freight elevator is now in the rear of the store and no longer requires the muscles of lusty clerks for its operation—machinery does all that. In the front of the store a trim passenger elevator conveys customers to and from the various floors and departments. No more is each clerk a jack of all trades, selling stoves and following them to the homes of customers to set them up. With the division

HENRY C. WEBER.

of the store into departments came the department salesman, especially trained and equipped with a complete knowledge of the particular line of goods over which he is given charge in the store. He has complete supervision of the stock in his department and his duty is to give it his special attention, to attend to the sales within it and to keep it supplied and in order. Then we have the builders' Hardware department and the builders' Hardware salesman; the cutlery department and the cutlery salesman; the tableware department and the tableware salesman; the sporting and athletic goods department and the sporting and athletic goods salesman; the tool department and the tool salesman; the shelf Hardware department and the shelf Hardware salesman; the house furnishing and stove salesman. That this system is far superior than to have each clerk in charge of every line of goods is at once apparent. It individualizes the responsibility, and if blame is to be attached or reward given, the employer knows immediately where it belongs. In the larger cities a hotel department is added in which the culinary needs of hotels, railroads, boats, boarding houses and restaurants receive special attention.

Thirty years ago the Hardware man was satisfied to sit on

his keg of nails and wake up only when some customer insisted upon coming in to buy. Window decorations he had none. If by chance there was some article in the window, it remained there until it was sold. Advertising had been thought of in those days, but not by the Hardwareman. There may have been some who were ahead of their time; but even with these, if they did have an announcement of their wares in a newspaper, it was rarely changed all the year around. To-day the progressive Hardware merchant must be a liberal advertiser and he must use judgment and variety in his advertising; in fact, newspaper advertising has become such an important factor in these times that advertisement writing has risen to the dignity of an art, and we have among us men who make it a profession.

The progressive Hardware merchant of to-day must also give heed to appropriate window dressing of frequent variety and to attractive display within his store. In the seventies it was by no means a pleasure to visit a Hardware store, with an ugly sight of wash boilers, coal scuttles, milk pails and chains greeting the eye and freight jostling one along the narrow, unscrubbed aisles made up of a long row of dull finished stoves on one side and a counter (none too fancy) on the other. To-day the Hardware merchant's emporium is as much of a shopping place which ladies delight to visit as a fancy bazaar. Even women clerks have their place in a modern Hardware establishment, and such a thing was unheard of when I made my beginning in that business. Their appearance accounts much, of course, for the disappearance of the untidiness of the Hardware store of old.

Whether the business is as profitable to-day as it was thirty years back is a question that depends much upon the individual merchant. It is certain, however, that it was easier to make money in it in those days than it is now, because the demands now are greater. The Hardware merchant of the present must have more ingenuity, more business ability, more tact, more taste than his brother of the earlier days. Competition among the retail dealers and combination among the manufacturers have decreased the profits on each sale. While it is true that competition is the life of trade. it is also true that its abuse in late years has led to an utter disregard of quality of goods. Every standard article of value has its hundred imitations by the cheapness of which the innocent public is gulled into buying that which afterwards proves worthless. For this reason the consumer must rely largely upon the word, the integrity and reputation of the merchant when he pays more for an article that is elsewhere advertised as cheaper, because he is getting quality.

Another notable change that has taken place in the Hardware trade within thirty years is the tendency toward special-Before the panic of 1873 every Hardware dealer, whether large or small, handled every class of goods that belongs to the trade. The first departure of that sort was made in Michigan by the late James L. Lischer, in conducting exclusively a builders' Hardware store. Rohns & Schafer were the pioneers in the exclusive blacksmith and carriage supplies. A more recent instance of this specializing is the tool Hardware emporium of Chas. A. Strelinger & Co., of Detroit, and of Coulson & Morhous, who sell only such Hardware as is used in house furnishing. In my own store, while it is a general Hardware and house furnishing business, I have been making a specialty of Garland stoves and I have exhibitions of them on the second floor, equal in exclusiveness and variety to the show room of any stove foundry. The reason for this specializing may be found in the fact that, with the progressiveness of the times, the Hardware business has expanded into so wide a field, each part of which must be cultivated with such care, because it is attended with so many details that it almost requires all the emergency of a single man to master all there is to a single branch. In fact, the tendency of the times has been toward specializing in almost every business and profession. We have specialists among lawyers and doctors, as well as among Hardware men and merchants in general.

The remarkable advance in the Hardware trade, the wonderful changes that have occurred and the progressiveness of the merchant of to-day, are largely due to the influence of trade journals and of Hardware associations. These two forces have been the medium of disseminating advanced ideas; they have afforded an interchange of thought between merchants, not only of the same city, but of the State and country; they have created a better feeling and understanding among dealers and have raised the standard and character of the business. In fact, the trade journals and the associations are now indispensable to the successful Hardwareman. They are the means of a mutual co-operation that is necessary for the preservation of the individual dealer. God bless them!—Henry C. Weber.

A Crude Oil or Tar Burner.

At the meeting of the Pacific Coast Gas Association at San Jose, Cal., July 16-18, Charles Hughes contributed to the "wrinkle" department the description and sketch, presented herewith, of a burner for crude oil or tar: "It is constructed entirely of pipes and fittings, such as are found around all gas works and machine shops. The larger or outer pipe, being 34 inch by 18 inches long, is screwed into a tee. Through the straight opening of the tee, which is bushed down to required size, a 14-inch pipe is screwed, which enters into the 34-inch pipe about 6 inches, and is capped as shown in the drawing. The cap has an opening in the form of a cross, which is filed or sawed through the

end to allow of the flow of oil. The large pipe carries on its furnace end an ell, plugged. A slot is filed or sawed off the proper size for the size of the flame desired. The steam is admitted to the large or outside pipe through the side opening of the tee, as per drawing. The author of this drawing has had excellent results from the use of this burner; in fact, much better than were obtained from some of the expensive burners on the market, the cost of the burner being comparatively nothing."—Age of Steel.

History of By-Product Cooking.

The first mention of the by-product oven dates back to 1768, in which year, according to the Engineering Magazine, tar was produced by a chemical process in a by-product oven at Fishback, in the Saarbrucken coal fields in the Rhineland provinces of Germany. Systematic experiments along these lines were made in France and Belgium many years ago, and in 1863 a by-product oven plant was in efficient operation at St. Etienne, France. From that time until 1882, when Mr. L. Semet, an eminent engineer and a director of the firm of Solvay & Co., of Brussels, Belgium, perfected the Semet-Solvay retort coke-oven system, this departure in fuel-making underwent a gradual development. The first plant of this pattern was installed at Mons, Belgium, in 1882, and since that time the system has met with great success in many coking fields.

The Man with a Million.

"Do you subscribe to the assertion that a man with a million dollars can do whatever he chooses?"

"No," answered Senator Sorghum, "I do not. These days, a man with a million dollars wants to lie low and keep out of trouble or the first thing he knows, two or three men with a billion apiece will take his money away from him."—Washington Star.

RECENT TRADE PUBLICATIONS.

OSGOOD SCALE Co., Binghamton, N. Y. Illustrated price list and catalogue of Osgood United States Standard Scales. This is a pamphlet catalogue of 36 pages, covering a line of production of this old concern which was established in 1865. It is arranged under a somewhat different plan from previous catalogues, and, in fact, all the Scales have a new descriptive number, facilitating the ordering of these goods, and lessening the liability of making an error, which is frequently the case when other methods of description are attempted. This catalogue gives an excellent idea of the extensive product made by the company, including Patent Combination Wagon Scales, Iron Lever Scales, Portable Platform Scales, Warehouse, Miners' and Transportation Scales. It is very neatly printed, carefully compiled, full and complete descriptions and illustrated throughout. Included in the contents will be found Wool and Cotton Scales, Salt Meat and Fish Scales, Furnace Stock Charging Scales, Cattle Scales, Butchers' Meat Beams, etc., etc.

Forest City Paint and Varnish Co., Cleveland, Ohio. Are distributing a 40-page pamphlet having reference to their paints and varnishes, and containing a number of half-tone illustrations showing the style of packages in which these goods are marketed, many of which are novel in construction and original and attractive in appearance. Other illustrations are given, showing methods of manufacturing of a variety of their products, altogether making the pamphlet an extremely interesting one to those handling these or similar products. Included in its contents is a full list of all the various articles in the line of mixed paints, colors in oil, wagon and floor paints, machinery paints, bridge and iron paints and dry colors generally; also their barrel paints and a variety of oils, dryers, asphaltums, etc.

Union Mfg. Co., New Britain, Conn. Thirty-page pamphlet catalogue, embracing their line of Iron and Wood Planes marketed under the trade-mark, Union. They claim that the articles in this line furnished by them, which are guaranteed to be right in every way, are well made, possessing easy and simple adjustment, using in their construction the best material only. In point of finish, they are claimed to be excelled by none now on the market, with cutters that are made of the best guaranteed steel and finished by a modern process that gives a keen cutting edge that will help in all kinds of work. The assortment covers all the most desirable styles of planes now handled by the trade, including fore, jack and jointer and block planes of every description, together with a line of spoke shaves, to which a portion of the catalogue is devoted.

W. Bincham Co., Cleveland, Ohio. Catalogue of 64 pages, filled to repletion with illustrations having reference to Household Specialties which they state in their preface is not a catalogue, but is intended more as a suggestion of what they have to show in their newly remodeled housefurnishing department. It certainly shows a very extensive line of useful articles for use in the kitchen and for general housework to be seen on the second floor of their extensive establishment. As it averages about a dozen illustrations to the page, some idea may be formed of the extent to which this line of goods is exploited in this attractive manner. It is printed on coated paper, with the headings of each page printed in blue. It represents the kind of literature that is certain to be preserved by the recipient. Interspersed in its contents are a number of valuable recipes designed for home

purposes that would indicate the pamphlet was gotten up for a wider distribution than trade catalogues are generally; it has a very attractive cover, embossed in colors, and altogether, is a publication worthy of the reputation of this wellknown company.

CLEVELAND PNEUMATIC TOOL Co., Cleveland, Ohio, publish a catalogue of 50 pages, oblong in shape, covering the products of this concern in the way of Pneumatic Tools, Hammers, Riveters and Drills, being denominated their Catalogue "D." This is a very handsome catalogue, on extra heavy coated paper, superbly illustrated with perfect half tones which give in a thorough practical and pictorial manner the uses to which their various tools are put. These illustrations are exceedingly graphic in their way, and convey an admirable idea of what may be accomplished by the use of these improved, up-to-date pneumatic appliances, many of which are designed for special work and have been in use in a limited way for many years. It is intended as an adjunct to the machinery equipment of an up-to-date shop and where pneumatic tools such as are now being offered might properly be classed as a modern device. The evolution of development in the perfecting of these tools in the last four or five years has certainly been attended by tremendous strides and lightning changes, as they occupy a field entirely separate and unapproachable by any machinery device now known. This is an extremely interesting catalogue and appeals to all dealers who desire to handle the latest and most modern tools required for the accomplishment of perfect results in an economical manner.

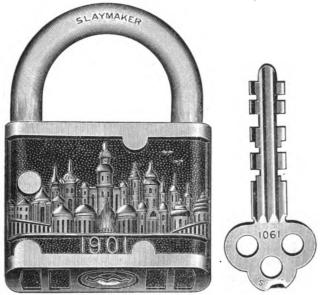

REINEKE, WILSON & Co., Pittsburgh, Pa. Fall catalogue of Gas Appliances, which is a pamphlet catalogue of 64 pages and covers in its contents a large variety of Gas Stoves and Ranges designed for the use of natural and artificial gas; Gas and Electric Chandeliers, Iron and Brass, Wood and Chain Pumps, and Supplies and Appliances for the Gas Fitting, Plumbing, Hardware and kindred trades. This is a very handsome and attractively arranged pamphlet catalogue, covering the above named goods. Fully and completely illustrated, giving full descriptions throughout. The illustrations are excellent half-tones, printed on coated paper, and the descriptions are plain and understandable by the ordinary dealer, showing the care with which the catalogue has been compiled. It is one deserving of the attention of those handling this line of goods, and if not already received by them, should be asked for. The designs are up-to-date and attrac-

SENECA CHAIN Co., Kent, Ohio. Thirty-two-page catalogue of the various Chains handled by the Hardware trade, including Mill Chains, Trace Chains, Butt Traces, Stage Chains, Breeching Chains and Pins, Breast Chains in large variety, Cart Back Chains and Ohio Pattern Cow Ties, "Polished" German Halter Chains, twisted link, and German Coil and Machine Chains. Included in the contents are Proof Coil Chains, self-colored or black, which are made also in B.B. and B.B.B. qualities; also Coil Log Chains, selfcolored or black. This is a very interesting catalogue for the Hardware trade, covering a large and improved variety of these desirable goods. The company state that their plant consists of both oil and coke fires, and feel that in the manufacture of chains they have the most modern and complete shop in the country. They sell exclusively to the jobbing trade and solicit their patronage.

NEW GOODS AND SPECIALTIES.

The 1901 Pan-American Padlock.

S. R. Slaymaker, Lancaster, Pa., John H. Graham & Co., 113 Chambers Street, New York, selling agents, is putting on the market the Pan American design padlock, shown herewith. The shackle is of steel rod, formed with the necessary openings milled, and nickel plated. The interior mechanism is so constructed that it requires both sides of the key to operate it. There are a large number of stock key changes and the corrugations in the key, combined with

THE 1901 PAN-AMERICAN PADLOCK.

the excellent system of interior mechanism, it is explained, afford extreme security. The shell is of heavy cast brass, with the background finished in chocolate color and the raised surface highly polished. The keys are nickel-plated, two keys to each lock. Attention is directed to the automatic action of the shackle, the ample space in and the small cross-section of the shackle, also to the attractive appearance of the lock.

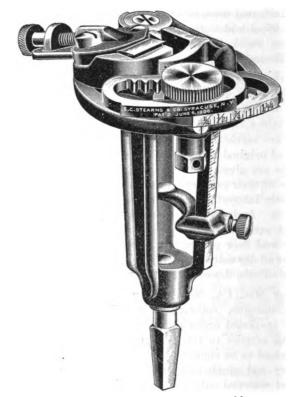

Improved Russell Staple Puller,

The Utica Drop Forge and Tool Co. and the Smith & Hemenway Co., of 296 Broadway, New York, have brought out an improved form of the Staple Puller as shown herewith. The new features include a device between the jaws and the

surface on both sides of the jaw. This tool is a combination of two staples, pincers, monkey wrench, two nail pullers and two wire cutters. It can be used to cut wire on both sides of the plyer, splice, straighten or tighten wire. It is designed more particularly for putting up, removing and repairing wire, etc., farm and railroad fence. It is 10½ inches long and weighs 1½ lbs.

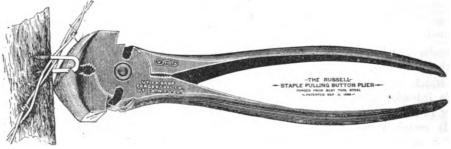

Adjustable Hollow Auger No. 33.

E. C. Stearns & Co., Syracuse, N. Y., are offering the Hardware trade their new Adjustable Hollow Auger No. 33, an illustration of which we give in this article. In its construction the new Hollow Auger combines the desirable features of the well-known Stearns No. 3 Hollow Auger,

ADJUSTABLE HOLLOW AUGER NO. 33.

together with several additional improvements which places it far in advance, in the estimation of the trade. Prominent among the new features is the patented adjustment of the

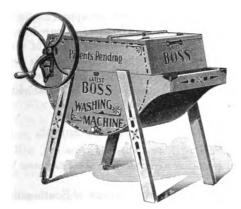

IMPROVED RUSSELL STAPLE PULLER.

rivet for tying barbed wire, and a wire splicer on the opposite side of the rivet for splicing plain wire. The head of the tool is now shaped so that depressions and uneven places in posts, trees, etc., can be readily reached to withdraw a staple or nail. There are two staple drawing grips; one on each side of the head. Other changes are in the form or shape of the jaw ends, which now have a flat and larger hammer knife. As shown in the illustration, the knife is slotted to receive a knurled head screw specially designed with a collar to fit in the slot of the knife, and which adjusts the knife to any desired size of cut. It does entirely away with the use of a screw driver and hammer in adjusting the knife. The screw turns readily between the thumb and fore finger, and is held by the collar so that the knife cannot work out of posi-

tion. This auger cuts any size tenon from ½ to 1½-inch. The pivoted jaws are provided with a graduated scale by which the size of the tenon is regulated. The required length of tenon is secured by a movable stop operating on a graduated scale, with rulings in sixteenths. It is hand-somely finished in lustrous black and red enamel baked on. All bright parts are polished and heavily nickel plated. Packed 1-6 dozen in a box.

Boss Internal Gear Washing Machine.

Boss Washing Machine Co., Cincinnati, Ohio, are the manufacturers of the Boss Washing Machines that are being distributed by the Hardware and Housefurnishing Goods trade, having become quite popular and meeting with extended sales. The Boss has been on the market twelve years, and its reputation is so thoroughly established wherever introduced that to-day the company have one of the largest washing machine factories in the United States. From year to year improvements have been embodied in the construction of the machine, the utility of which have been demonstrated by years of experience and experiment. Among

. .. INTERNAL GEAR WASHING MACHINE.

the improvements embodied in the Boss Internal Gear Washing Machine, an illustration of which we give herewith, may be mentioned increased leverage, decrease in amount of power necessary to operate it; increased rapidity, and no openings for escape of steam. All gearing is inside of casing and out of sight. All castings, flywheel excepted, are heavily galvanized in order to prevent rust. It is claimed the castings cannot be broken by ordinary use or by careless handling or in shipping. All wooden parts are made of Louisiana red cypress, which is impervious to water. The lower cylinder can be detached instantly from connecting rod and removed from machine, allowing the body of the machine when washing is completed, to receive a thorough cleansing and ventilation. Every machine is set up complete at the factory, thus making the machine always ready for use. All that is necessary is to attach flywheel to shaft. No screws or bolts are required to manipulate, or to get out of order. It does the work thoroughly, quickly and with very little power. It does not tear the clothes, and will last indefinitely. It is made in three sizes: No. 7, for family use; No. 8, for family use, extra large; No. 9, for hotel and laun-

The Troy Baking Oven.

The Royal Polished Steel Roaster Co., Troy, Ohio, are placing on the market through the Hardware and House-furnishing Goods trade the Troy Oven, illustrations of which are presented herewith. Fig. 1 shows the article as it appears in its closed form, being manufactured in one size only, 17 x 20 x 12 inches. Fig. 2 gives an interior view of the same article, and shows its style. These ovens are made from sheet metal with an artistically stamped door, nicely japanned, and are lined throughout with a good quality of bright sheet tin. The walls, sides, top and back are one inch thick, which gives an abundance of circulation, thus insur-

ing perfect baking or roasting. The grates or racks are made of tin cylindrical in shape, which make them attractive, strong and durable. The walls or linings come out flush with the opening for the oven door, so that the racks are readily and easily adjusted, as they can be drawn straight

FIG. 1.

out. This is a great convenience. The deflector or divider is made separate from the oven so that it can be taken out and repaired or replaced by a new one if burned out, without injury to the oven. They are made of two pieces of sheet steel, the flames striking the bottom part. Another sheet of steel is then placed one inch above the bottom piece, which runs from end to end of the oven, forming an air passage,

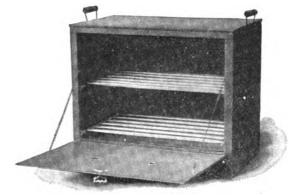

FIG. 2.

preventing the upper strip from getting hot and thus protecting the baking from burning on the bottom.

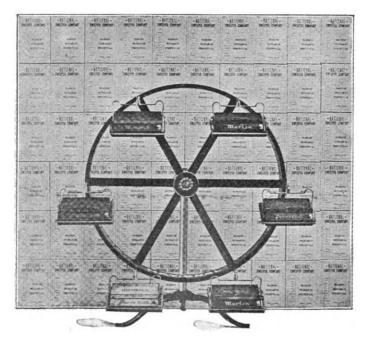

21st Annual Convention of the Sherwin-Williams Co.

The 21st annual convention of The Sherwin-Williams Co., the well-known Paint and Varnish manufacturers, was held at Cleveland, November 4 to 8. This annual convention represents a week set apart at the close of the company's fiscal year for all the traveling salesmen and divisional managers to report at headquarters, where they meet and review with the management the work done during the past year, and map out plans for future operations. Those annual conventions are a source of great strength to The Sherwin-Williams. Co. At their sessions light is thrown on every detail of the business and all are kept intelligently in touch with the extensive operations of the company. They prepare the salesmen for a more effective and intelligent campaign, while they afford to the management a keener insight into the trade situation, as a whole, than could be obtained in any other way. The convention this year proved the most successful one yet held. During the past year all branches of the business witnessed great expansion. The selling force was largely increased and several new branch houses and distributing depots were established. Large gains were made in the company's foreign trade. To supply the growing demands for their products manufacturing facilities had to be largely increased and the company were building during the whole year. The building operations completed to date represent an entire new plant at Newark, N. J., and several large new

buildings added to the home plant at Cleveland and at Chicago and Montreal. A striking feature of the convention week was the annual banquet held in the auditorium of the Cleveland Chamber of Commerce on Thursday evening, Nov. 7th, and attended by the visiting representatives, the employees of the Cleveland plant and the officials of the company. Coyers were laid for five hundred and the affair proved a happy function.

Roller-Bearing Carpet Sweepers.

In the accompanying half-tone we show a reproduction of the National Sweeper Co.'s large "Roller Bearing" Model, which they have just completed, to be used in advertising their new "Roller Bearing" Carpet Sweepers. This wheel stands nearly 6 feet high and is built throughout in the cor-

rect proportions of their regular Sweeper wheels.

Although this wheel is of immense size and great weight, there is so very little friction, practically none, in the Bearing, that the air from an ordinary electric fan will keep it moving. The wheel is so truly balanced that a very light weight placed on top of one of the Sweepers will set the wheel revolving. The end of the hub is fitted with a glass cap so that the working of the rollers can be readily seen. Upon a whole, this makes a very attractive and unique show window display, and demonstrates that the "Roller Bearing" Carpet Sweepers are among the easiest Sweepers on the market.

The Sweepers shown on the rim of the wheel are fastened with arms fitted with ball bearings which keep the Sweepers hanging level at all times. The background shown is made up from a number of cardboard boxes which are used by this company in packing their Sweepers.

A Self-Soaping Scrubbing Brush.

A self-soaping scrubbing brush is the latest novelty. At the back of the brush a stamped galvanized receptacle is provided for holding the soap, which may consist of waste, or chipped pieces, as most convenient. These are introduced through a circular opening through which the soap and water are fed to the fiber or bristles. The manufacturers of this novelty assert their brushes use a minimum of soap, and there is no need to dampen the floor with a wet cloth before beginning to scrub. The brush is easily cleaned by holding it for half a minute under the spigot to rinse out the soap chamber, and dried by hanging it by the hole on a peg.

A Department of Commerce.

One of the live questions, which will take residence at Washington, D. C., about the time Congress convenes and

maintain an active existence until legislative consideration is obtained, is the creation of a new executive department to be known as the Department of Commerce. Manufacturing and mercantile interests are advocating the establishment of this cabinet office, and recent affairs of state are combining to give momentum to the effort. Commerce with colonial possessions and the possibility of reciprocity treaties with foreign nations, not to mention the rapidly expanding general trade of the country, are subjects that have risen greatly in prominence in recent years, and almost month by month. Under these changing conditions the tariff will become a more complex issue, one sufficient to engage the best and chief attention of an executive department.

While a sentiment seems to be gaining among Congressmen that this addition to the President 's Cabinet is desirable, the scope of the proposed department has not taken definite shape. Bureaus of interstate commerce, navigation, customs, steamboat inspection and statistics would naturally belong to the Department of Commerce. In the matter of commercial statistics it may be remarked that the Bureau of the Treasury Department, which now has that matter in charge, has improved conspicuously within the past year. New and valuable compilations are appearing in the monthly summary of commerce and finance, prepared in the Bureau of Statistics, which present striking phases of the vast internal commerce of the United States. This is, of course, merely an incident to the phenomenal growth of that commerce, but it points the need of this new Cabinet position.-Bradstreets.

An Historic Implement.

An historic shovel, perhaps 150 years old, will be used for the formal breaking of ground on the St. Louis World's Fair site.

The shovel was used in the mines of Southeastern Missouri long before Louisiana became the property of the United States, or even before independence was achieved. It is made from a single piece of wood, and is considerably worn from use.

The shovel was buried for many years, and was unearthed at Mine La Motte, Madison County, Missouri, several years ago, and presented to the Peacedale (R. I.) Museum, where it was located after a long and diligent search by Pierre Chouteau, chairman of the World's Fair Historical Committee.

According to traditions, shovels of this character were in use in the mines of Southeastern Missouri between 1750 and 1775.

After the shovel has served its World's Fair mission it will be returned to the Peacedale Museum. It is the only known shovel of the kind in existence.

The French Menu.

He pulled himself up at the hotel table, tucked his napkin under his chin, picked up the bill of fare, and began to study it intently. Everything was in restaurant French, and he didn't like it. "Here, waiter," he said, "there's nothing on this I want." "Ain't there nothing you would like for dinner, sir?" "Have you got any sine qua non?" The waiter gasped. "No, sir," he replied. "Got any bona-fide?" "N-no, "Got any semper eadem?" sir." "No, sir, we haven't." "No, sir, not one." "Got any jeu d'esprits?" tempus fugit?" "I reckon not, sir." "Got any soirces dansants?" "No, sir." The waiter was edging off. "Got any sine die?" "We ain't, sir." "Got any pluribus unum?" The waiter's face showed some signs of intelligence. "Seems ter me I heerd of that, sir," and he rushed out to the kitchen, only to return empty-handed. "Maybe you've got some beef and cabbage, and a cup of coffee?" "Oh, yes, sir, we have," exclaimed the waiter, in a tone of the utmost relief; and he fairly flew out to the kitchen.-Wasp.

REVIEW OF THE MARKETS.

Wire Nails: There is a good business being done in Wire Nails, although quantities ordered are not large, and the varying quotations with which the papers are filled may have something to do with it. Large buyers appear to have received some concessions, but the regular trade is governed by quotations in our previous issue which still hold good, differentials in prices according to quantity cutting no important figure. Quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To	jobbers	n carload lots\$2.2	0 @ 2.30
_	**	less than carload lots	2.35
To	retailers	in carload lots	2.80
	••	less than carload lots	2.40

New York. There is considerable irregularity in local quotations, although of comparative unimportance. The following prices may be said to represent the local market:

Cut Nails: There is nothing especially new to report regarding the market for Cut Nails, a fair demand continuing for this staple line. The mills report a scanty supply of material as affecting delivery of some sizes. Quotations remain as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In less than	carload	lots		\$2.10	to 2.15
Carload lots			. .		. 2.03

New York quotations continue as previously quoted.

To jobbers in	carload lots on dock	\$2.18
**	less than carload lots on	dock 2.28
Small lots fr	om store	9 98 40 9 10

Barb Wire: With a lessening demand as the season draws near its close, Barb Wire finds the market steady at prices which have long prevailed. F. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers i	n carload lots, Painted	. \$2.60
- "	" Galvanized	. 2.90
"	less than carload lots, Painted	. 2.65
"	" Galvanized	. 2.95
To retallers	in carload lots, Painted	2.70
"	" Galvanized	. 8.00
44	less than carload lots, Painted	. 2.80
44	(4 (0-111	

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named.

Plain Wire: Orders are being booked largely for 1902 supply of Plain Wire which, it is presumed, are entered for specific delivery at some slight concessions for good orders. The current quotations are unchanged and the demand for immediate consumption of no great importance. Quotations continue as previously given: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots\$2.25 " less than carload lots 2.30	\$2.65
" less than carload lots 2.30	2.70
To retailers in carlots 2.35	2.75
" less than carload lots 2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain F	'ence Wir	e Adva	nces	(Catch	We	ghts)	
Nos.				•		Galva	inized.
6 to 9	Base	. .				80.40	extra.
10	\$0.05 a	dvance	over	base		.40	44
11		44	**	"		.40	"

16	55	**	**	**		.75	44
17	70	**	44	44		1.00	**
-T A	-						

Cordage: The Rope market is without material change, and we continue the quotations named in our previous issue, which represent the present market.

	Pounas.
	Cents.
Manila, 7-16 inch and larger	. 18
Manila, 7-16 inch and larger% inch	. 1814
¼ inch and 5-16	14
Sisal, 7-16 inch and larger	. 91/4
% inch	914 934 1014 816 614
inch and 5-16 inch	1014
Lath Yarn, medium and coarse	. 816
Jute Rope, No. 1	. 616
No. 2	. 6

Linsced Oil: The following quotations are the latest announced by the Dean Linseed Oil Co.:

```
In lots of less than 5 barrels.......61 cents per gallon. In lots of 5 barrels or more.......60 cents per gallon.
```

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gailon higher than Raw. Calcutta Oil, 85 cents per gallon.

ALBANY TRADE.

A steady good business is reported from all sections, of which Albany is the centre. The excellent weather of the Fall has been improved by the buying public. The trolley lines leading to the cities carry back and forth the full capacity of their cars, and the retail merchants are kept busy supplying the wants of the suburban traders.

The recent change to colder weather and the first fall of snow has started orders from those not earlier supplied with their skates, sleighs, snow shovels and kindred goods. Carvers and other table cutlery are good sellers this Fall to help the housekeeper in celebrating Thanksgiving more thankfully than usual, because of the good times the prosperity of the country has provided. Plated ware, pocket knives, scissors, razors and manicure sets in their varied and novel patterns and mountings are selling well and make the Hardware dealer's store attractive and tempting when well displayed in holiday array.

The food chopper, the cleverest article for the kitchen, has proven to be a wonderful seller this Fall. A dealer here who made a special display and demonstration, showing samples of the work done by it in cuttings of raw and cooked meat, potatoes, carrots, beets, cabbage, coffee, citron, crackers, etc., all arranged on granite plates separately and on a white covered table, proving a very attractive display, with the demonstrator in his white coat and apron, succeeded in running off at retail between three and four hundred choppers in a little more than a week with a handsome return in cash as the result and a big advertisement of his store as well. A well planned "sale" of this character with details carefully looked after, stimulates business beyond one's expectations.

The tone of the market seems strong with but one or two exceptions. The manufacture of wire nails has been taken up by quite a number of factories outside of the big consolidation and this product is being distributed quite freely, but how long this competition will last is uncertain. Most other lines are steady as to price, and Spring orders usually placed at this time, are consequently being entered and in good volume.

A scarcity continues in some leading articles, popular makes of goods in various lines being difficult to get, a condition one would have thought most improbable three or four years ago. The outlook for a satisfactory close of the year with a good showing on the right side of the ledger is promising.

ALBANY HARDWARE & IRON Co.

THE PHILADELPHIA TRADE.

It is gratifying to report trade is keeping up in very good volume, and the cool weather of the past few days has stimulated it and caused an increased demand for holiday goods. Prices are firm and advances are constantly cropping out in unexpected places. These advances seem to be entirely free from any speculative element, and are simply caused by the increased cost of material.

Manufacturers complain that almost everything that enters into the manufactured article has advanced, and this includes all raw materials, such as iron, steel, wool, leather, oil, etc., while labor is better paid and more generally employed than for years past.

It is very evident that the people have money to spend, and good trade does not by any means appear to be confined to our own line of business.

Cut Nails are in great demand, and exceedingly scarce, and for some time past it has been very difficult to get goods, and the manufacturers tell us, not only is it hard to get raw materials, but they frequently find it impossible to get the cars to carry the goods.

Under such circumstances, it is hardly surprising that the price of Cut Nails is rapidly approaching the price of Wire Nails, and they are now nearer together than ever before.

BIDDLE HARDWARE Co.

THE BALTIMORE TRADE.

Trade in this section the early part of the month was very quiet owing to the election, but at present it seems to have recovered its usual vigor and is keeping us moving lively. There are few changes to note in either the prices of goods or the ability to get prompt shipments of certain lines such as axes, loaded shells and a few others. Prospects for a good Spring business are most encouraging. Collections continue good.

II. W. Webb & Sons.

THE PITTSBURGH TRADE.

We are having a spell of rough weather just now which has made Winter goods move out rapidly. Have never had such a run in Gas Heating Stoves, while Horse Blankets and other cold weather goods are in good demand. Guns and Ammunition have also been very large in sale this Fall. The activity of the Steel and Coal and Coke trades makes a good demand for the general line of Tools and Hardware.

We can with sincerity give thanks for another year of good business and good prospects for the future.

LOGAN-GREGG HARDWARE Co.

THE CLEVELAND TRADE.

Trade continues good and prices remain firm except on a few lines, where new mills are coming into market with instructions to their salesmen to undersell. This is a picnic for brokers and shows a lack of business sense in manufacturers. Only for the action of the larger mills in ignoring, a general demoralization of business would follow.

Manufacturers authorizing a cut of 10 cents below any other price, is a direct bid to bankrupt its stockholders and demoralize business. When the large manufacturers decide to meet their price until receivers' sales close out outside mills, we shall have a repetition of '93, and then must pay abnormally high prices again to recoup the losses, but this will not benefit wrecks caused in the scramble. It is better for all concerned that prices should be based on the cost of manufacture, and manufacturers who cannot figure costs should have no place in business.

It may seem brave, but it is not discreet for bulls to butt engines; it would be wiser for them to be content to feed by the side of the track.

Competition may be the life of trade, but it has often been the death of stockholders and seriously crippled the business of the country.

The Lockwood-Taylor Hardware Co.

THE CHICAGO TRADE.

Business with us continues to keep up wonderfully well, and the outlook at present is very bright and promising for the continuance of same. Prices on all lines are very firm, and while advances, thus far, have been very few and slight, we look for higher market values in a general way in the near future. Goods for Spring delivery, orders for which are now being placed for future shipment, are selling very rapidly, and it is crowding our salesmen to the utmost to take care of this business, in addition to the regular current Hardware orders. The trade seems to realize the fact that present prices are very low, and fearing that the markets will advance, are taking advantage of the prevailing condition.

Steel makers throughout the country, so far as we can learn, are utterly unable to cope with the present demand for raw material; consequently most all manufacturers are considerably behind in the execution of our orders, and it is an exceedingly hard matter to get goods to keep our stock supply up to the usual limit. We are afraid that this will be even worse when the Spring season opens up proper, and are ourselves anticipating shipments, so as to have a good stock on hand prepared to take care of our regular business, as well as the increase that we are enjoying, with our usual promptness and dispatch.

Wells & Nellegar Co.

THE MINNEAPOLIS TRADE.

Business is good in all lines. We are having beautiful Fall weather, and out-door work, as far as the building line is concerned, is being carried along practically the same as during the Summer months. The only serious trouble is the price cutting that we have already complained about. The T. M. Roberts Supply Co., has been re-organized, the business having been purchased by some of the largest creditors and is being continued.

The farmers have had excellent weather for threshing and Fall plowing. They are getting fair prices for wheat and good prices for flax, and are, on a whole, in a very prosperous condition. The price of farm lands comes pretty near telling the story as to the conditions of the farmers.

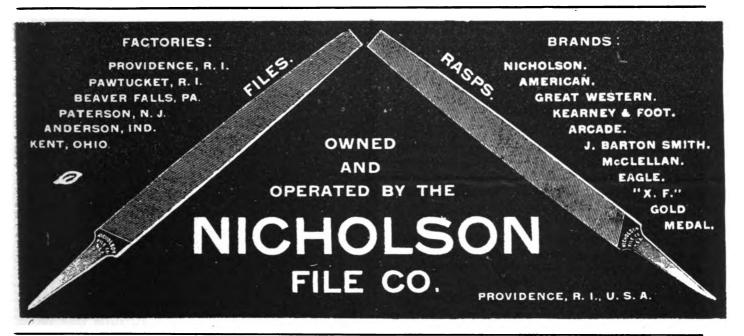

In the northwestern part of North Dakota a school section was about to be put on the market. There were three parties ready to pay \$20 an acre cash, and this for unbroken land without any improvements on it. This was 20 miles from the railroad and 500 miles from Minneapolis.

On a recent trip, about 75 miles southeast of the Twin Cities, we found that farm land there was being held at \$60 per acre. If farming didn't pay and farmers were not generally prosperous, land would not bring in such figures.

W. K. Morison & Co.

.

Wire nails were first manufactured in the United States in 1851 in New York.

THE SAN FRANCISCO TRADE.

Hardware dealers and allied trades people are alive with feelings attuned to appropriate Thanksgiving Day thought, and to better afford an opportunity that will seem more like an "at home" occasion than the formal Thanksgiving Day for discharging good-feeling sentiment from their overstocked hearts, a night of the week following the day President Roosevelt has set apart for public acknowledgment to the people's common Benefactor, has been selected by the San Francisco and Oakland Retail Hardware Dealers' Association, and the following quartette of Hardwaremen have been appointed the Committee of Arrangements: Al Jones, manager of the Alexander-Yost Co.; William Brown, of Chas. Brown & Sons; Geo. M. Hickman, of the Geo. M. Hickman Co., and Henry L. Howse, of Howse Brothers.

Charles M. Curtis, Hardware department manager of the Dunham, Carrigan & Hayden Co., who returned a few days ago from a New York business trip, is slated for an early day address before the local retail Hardware association.

A. L. Scott, of Miller, Sloss & Scott, who returned last week from a New York visit, in speaking of the combination project that, has been several times noted in this correspondence of late regarding industrial interests of San Francisco, involving the consolidation of leading wholesale Hardware and iron and steel houses, said:

"The proposition of such consolidation was first called to my attention by a New York business man, who informed me that it was current rumor in Hardware circles in New York that the wholesalers of San Francisco intended to enter into a combine."

Mr. Scott was emphatic in saying that the proposition had never been discussed by him with any member of the Pacific Coast jobbers alleged to be in the deal. He did not believe such a consolidation would be effected at an early date, if at all.

INDUSTRIAL PRESS ASSOCIATION.

New England Hardware Dealers' Association.

The regular monthly meeting of the New England Hardware Dealers' Association was held on Nov. 13th at the United States Hotel, Boston. The meeting of the Executive Committee as usual preceded the dinner, which was served at 5:50 P. M., and attended by nearly 50 members and their guests. President George W. Burditt occupied the chair, and when the dinner was brought to a conclusion, introduced as the principal speaker of the evening Congressman Samuel L. Powers, representing the Eleventh District in Massachusetts, and he entertained the members with an extremely enjoyable address on a peculiarly Boston subject, "The Typical American."

Mr. Powers said that the typical American was the average American, one possessing the characteristic traits upon which the national character was founded. These traits were industry, thrift, love of education, courage, good nature and patriotism. We were a nation of workers and the loafer had no place under the Stars and Stripes. There were 27,000,000 of people in the United States engaged in the gainful occupations. Of this number more than 17,000,000 were wage earners and constituted a tremendous moral and political force in upholding American institutions. Thrift was the ability and capacity for accumulating wealth. The valuation of the property possessed by the American people amounted to 90,000,000,000 of dollars, of which 25,000,000,000 were accumulated during the decade from 1890 to 1900. This sum was greater than the entire property accumulated from the landing of Columbus down to the breaking out of the Civil War, and the present valuation of property possessed by the American people was greater than that which had been accumulated by all races through all ages from Adam down to the time of the adoption of our Federal Constitution in 1789.

Referring to our railroad system, Mr. Powers said that the American people had constructed and equipped during the last sixty years 180,000 miles of railroad—enough in extent to encircle the globe seven times and leave a surplus sufficient to build a line from Boston to San Francisco. He referred to the adoption of methods of economy which had proved so essential to industrial development and cited as an illustration the fact that the charge in 1837 for transporting a ton of freight one mile was 7 cents, while in 1890 the charge was only three-fourths of 1 cent.

Referring to our love of education, he said that the American people fully recognized that the safety and security of free institutions depended upon the intelligence of the masses, and that we expended last year \$200,000,000 for free, compulsory education of our people, this sum being more than was expended by Great Britain, Germany, France, Belgium, Italy and Spain combined.

He said that courage was a characteristic trait of Americans and was so recognized by the world since the day when Captain Parker with his undisciplined band of men and boys met the regulars on Lexington Green down to the night that Dewey sailed into Manila Harbor over the submarine mines and beneath guns of frowning forts.

Referring to the good nature of the typical American, he told many stories to illustrate this characteristic and closed with a tribute to American patriotism.

At the conclusion of Congressman Powers' address, L. H. Pease, of the Stanley Works, New Britain, Conn., was called upon and made a brief speech. A vote of thanks was given

Mr. Powers for his able effort. The proceedings were enlivened by vocal music given by James W. Calderwood. D. Fletcher Barber, Henry M. Sanders and James A. Farless were announced as the Entertainment Committee for the meeting which will be held on December 11th, which will be celebrated as the Annual Ladies' Night of the Association.

Importance of Trade With Mexico.

The renewed attention to trade conditions between the United States and the American countries lying south of her borders, due in part to the meeting of the Pan American Congress at the City of Mexico, lends special interest to a statement by a British official in Mexico, Consul General Biorklund, which has just reached the Treasury Bureau of Statistics. That officer calls attention sharply to the fact that in the one American country at the South with which the United States has satisfactory transportation facilities, Mexico, the trade of the United States has vastly outgrown that of other nations. Fifty years ago the trade of Mexico was carried on by British houses, and as late as 1872-3 was in a fairly flourishing condition, but since the opening of the Mexican Central and Mexican National Railways, American manufacturers have yearly increased their trade with the Republic. To-day the British trade is confined to a few agencies (there being no important commercial establishment), who, by means of samples and catalogues, undertake the execution of orders. Some of the large British houses employ travelers, who can always count on their usual customers for orders; but other houses frequently send out such unsuitable men, often foreigners, that they are unable to get a single order. Mr. Biorklund calls attention to the following points that have been very much overlooked by many British traders:

"There are over 900 different classifications in the Mexican tariff, and lists of articles that clearly specify those in which a doubt might exist, are issued by the Minister of Finance. With these (which can be obtained on application) and the original tariff, there is no reason why so many mistakes should be made in consular invoices. More care should be taken in drawing up these documents, which duty should not be left to junior clerks, as is too often the case. Mistakes are of daily occurrence, with consequent fines, and the consignee has mostly to suffer the loss. All these difficulties could be obviated if there were a more careful observance of the tariff regulations.

"More attention is required to the question of packing. This does not consist only in a good outer case (which in many cases is better than the boxes made on the Continent), but it is the way the contents are packed in the case. Merchants or customers abroad often give instructions as to the packing of certain articles, not only to secure their safe arrival, but also on account of the duties that may be leviable on those goods. If these instructions were properly carried out, it would save a great deal of trouble on both sides.

"Great delay in execution of orders in the United Kingdom is another serious drawback to the extension of trade. Orders from Mexico could certainly be filled in, say, three months, but it is often more than double that before shipment is advised. This has more than once been the cause of important orders being sent to the United States or some European country where the order has been filled at once.

"Still another point that deserves the attention of the British trader in general is the failure to give estimates or descriptions when asked for. In such cases an order may depend upon a full and intelligible description being given to the would-be customer in metric weights and measures."

The relative growth in the exports of the great nations to Mexico, referred to in the above statement of Consul Biorklund, is accurately measured by the following table prepared by the Treasury Bureau of Statistics, which shows the value of the exports of the United States, United Kingdom, France, Germany and Spain to Mexico in each year from 1887 to the latest attainable date, in millions of dollars:

EXPORTS OF MERCHANDISE FROM THE UNITED STATES, UNITED KINGDOM, FRANCE, GERMANY AND SPAIN TO MEXICO (in Millions of Dollars.)

	United	United			
Year.	States.	Kingdom.	France.	Germany.	Spain.
1887	7.9	5.8	7.6	1.1	1.3
1888	9.9	6.7	8.5	1.6	1.3
1889	11.5	7.9	10.8	3.5	1.6
1890	13.2	9.8	10.7	3.5	1.8
1891	14.9	9.5	8.8	3.4	1.5
1892	14.3	7.2	6.8	2.9	1.4
1893	19.6	6.1	5.4	2.9	1.3

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interests to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED NOV. 11, 1901.

307,761. Broom Holder, H. Harger, Delhi, Iowa.

307,767. POCKET KNIFE, I. W. Heysinger, Philadelphia, Pa.

. 307,778. FAUCET, W. A. Leggo, New York, N. Y.

307,781. STAPLE-LOCK, G. W. Leuchtenburg, Cincinnati, Ohio.

307,787. COMBINATION TRY AND BEVEL SQUARE, H. W. Merrill, Lynn, Mass.

307,805. SASH FASTENER, A. G. Safford, Boston, Mass.

307,821. RAZOR STROP, Z. B. Wakeman, Chicago, Ill.

307,848. Tool for MAKING LOCK MORTISES, S. W. Drowne and D. K. Hubbard, Norwich, Conn.

PATENTS ISSUED NOV. 12, 1901.

686,244. Automatic and Reversible Sheet Metal-Weatherstrip for Doors, C. A. Armantrout, Seymour,

686,262. Wheelbarrow, G. C. Cone and F. J. Cooper, Toledo, Ohio.

686,268. SHAVED ICE PERFORATOR, E. G. De Ry, Seattle, Wash.

686,345. SASH FASTENER, E. Schindler, Eaton, Pa.

686,399. Saw, W. T. Heorge, Liberty, Mo.

686,424. Screwdriver Kit, W. J. Smith, Lowville, N. Y., assignor to W. H. Egleton and J. N. Smith, Lowville, N. Y.

686,437. WRENCH, G. W. Boozer, Memphis, Tenn.

PATENTS EXPIRED NOV. 18, 1901.

308,055. SASH FASTENER, I. N. Buck, Elgin, Ill.

308,057. SHUTTER WORKER, H. Camus, St. Louis, Mo.

308,089. ROLLER SKATE, F. B. Mueller, Decatur, Ill.

308,145. TRY SQUARE, W. B. Edwards, Unionville, Conn.

308,198. Proportional Balance, D. L. Roberts, Royalton, N. Y.

PATENTS ISSUED NOV. 19, 1901.

686,745. WAGON JACK, F. P. Lutz, Millhall, Pa.

686,750. Device for Securing Handles to Sawblades, E. Morris, New Haven, Conn., assignor of one-half to G. E. Morris, New Haven, Conn.

686,766. Door Hanger, A. Rochwite, Kingston, Wis., assignor of one-half to W. R. Hammond, Wautoma, Wis.

686,774. Door HANGER, W. B. Smith, Chicago, Ill.

686,776. WRENCH, T. E. Smyth, Galion, Ohio.

686,812. SKATE, A. Kiss, Jr., Kalacsa, Austria-Hungary.

686,869. Self-Closing Window, E. Van Noorden and H. C. Smith, Boston, Mass.

686,882. PADLOCK, W. R. Ballou, Stamford, Conn., assignor to The Yale & Towne Mfg. Co., Stamford, Conn.

- Washington Hardware Association.

The third annual convention of the Western Washington Hardware Association convened at Tacoma November 13 and 14.

The most important piece of business transacted was the passage of a resolution by which the association will hereafter be known as the Washington Hardware Association, instead of the Western Washington Hardware Association.

This action was made necessary by the fact that several Eastern Washington members had been admitted and others living in that section of the State were desirous of joining. The Hardwaremen have found that much good has resulted from the work of the association, and the State organization will be able to accomplish more than when representing but half of the State. The question of affiliation with the National Hardware Association was brought up during the meeting and it was decided to exert special efforts to building up the State organization for another year, and at the next annual meeting formal application for membership in the National Association will be made.

ANNUAL ELECTION OF OFFICERS.

The report of the secretary showed that the organization is in a prosperous condition, both as to finance and member-The following officers were elected for the ensuing year:

President, Henry Mohr, Tacoma.

Vice-president, F. M. Scheble, Wenatchee.

Secretary, D. G. O'Brien, Seattle.

Treasurer, C. W. J. Rickers, Seattle.

William M. Olive, of Mission, and the above-named officers compose the Executive Committee. Messrs. Mohr and Rickers were re-elected to their respective offices. It was decided to admit traveling men, representing Hardware firms and corporations, as honorary members of the association.

The following members of the association were present:

Henry Mohr, Tacoma; C. W. J. Rickers, Seattle; R. I. Morse, Whatcom; J. W. Campbell, Seattle; Charles Hood, Puyallup; C. D. Patch, Seattle; Mills & Cowles, Olympia; William Christensen, Ballard; J. F. Wellborn, Whatcom; Thomas Moran, Arlington; C. S. Enger, South Tacoma; F. M. Scheble, Wenatchee; A. Gehri, Tacoma; George L. A. Forck, Tacoma; W. M. Olive, Mission; G. W. Shannon, Anacortes; A. M. Bryant, Buckley; Frank T. McNitt, Centralia; Mr. Osgood, Everett; D. G. O'Brien, Seattle.

THE BANQUET.

The most thoroughly enjoyable feature of the convention proved to be the banquet, held at the Hotel Tacoma. orchestra was in attendance, and an excellent menu was served, beginning at 7:30 o'clock. After the banquet had been partaken of and cigars lighted, Frederic Mottet, as toastmaster, introduced the first speaker of the evening, President Henry Mohr, of the association, who responded happily to the toast, "Our Guests," and extended a hearty welcome to the visitors present.

C. W. J. Rickers, of Seattle, followed with an address upon "Our Organization and Officers," explaining the scope of the association, which now numbers fifty-two members, its aims and objects, and especially complimenting President Mohr, who had been honored with re-election by the association. George Boole, of Seattle, then spoke upon "The Jobber and the Retailer," outlining the difference between the two branches of the trade.

OTHER SPEAKERS.

"Our New Possessions" was the topic assigned to C. H. Baker, whose remarks were of a humorous nature. Strong spoke upon "The Press," after which "Our State and Its Industries" was discussed by Henry James, who pointed out the commercial growth of the State and its great future. "The Ladies," by Frank Cole, of Tacoma, was one of the

amusing addresses of the evening, Mr. Cole treating the topic much as he treated the babies at the Puyallup Fair baby show. R. I. Morse, of Whatcom, spoke upon "Co-operation and the Advantages to Be Gained by It," after which a large number of impromptu toasts were responded to.

"Do It Now's" for the Dealer.

What short phrase can be of more importance in the saving of money and trouble in the career of the ordinary business man than the one, "Do It Now?" Is there any merchant who, as he reads this phrase, cannot recall to his memory numerous incidents that occurred where money could have been saved if he had taken the prompt action implied in our subject? I think not. Therefore, it is not out of place for me to give a few suggestions where prompt action could be used to advantage, so that those who read may learn.

If your stock of a certain article is running low and you think it time to order more, don't wait until the last package has been sold and another customer in the store for the same article that must be dismissed with the phrase, "Just out." Don't delay until such time, I say, but send your order and "Do It Now."

Some line of goods you purchased may not meet with the approval of your customers, and therefore it remains upon your shelves. You think it time it should be placed upon the bargain table to be turned into ready cash. Don't put off this necessary action until the goods become unsalable—turn your thoughts into actions and "Do It Now."

When you receive a telephone order, don't proceed to wait on the other customers before entering the 'phone order, but "Do It Now."

If your window display has been greeting the eye of the public for the past three months or more, and you think a change would do it good, don't delay; follow up your thoughts and "Do It Now."

When a customer in haste gives you an order at the door, don't trust to your memory to remind you of that order at your leisure, but make a memo of it, and "Do It Now."

If a shipment of goods arrives, don't leave the checking of weights and numbers of parcels until to-morrow, but "Do It Now." Short weights and breakages must have immediate attention if allowances are desired.

If you advertise in the daily newspaper to obtain best results, change your advertisement every day. Don't let the same copy appear from day to day until several weeks are past. Consider the possibilities of extra business from changing an advertisement and "Do It Now."

If a draft from your whosesaler is presented, don't think it nerve on his part, asking for your acceptance; but if you can possibly fulfil the requirements of the draft, accept it, and "Do It Now."

If a note soon falls due for which you haven't sufficient funds on hand at present to meet its requirements, don't delay making preparations to fulfil your obligations. a start to collect some of the outstanding accounts, and "Do It Now."

If your delivery system fails to get customers' goods to their homes at the promised time, which causes customers to complain, don't wait until your complaining customers are dealing at the place across the way before making the necessary change, but "Do It Now."

Don't let unscrupulous travellers, by holding out tempting offers, persuade you to overload yourself with slow selling merchandise. The chief evil arising from overstocking, financial embarrassment, may, perchance, overtake you. Make up your mind once and for all that you will only buy in quantities to suit your trade, and "Do It Now."

To make a success of your business don't know too many of your neighbors' business methods; for, in condemning these to your customers, you but give your neighbor a free advertisement. Make up your mind to know only your own business, and "Do It Now."—Ex.

100 Shot Rifle Championship Match.

On Election Day, November 5, there was a match of unusual interest shot at Schuetzen Park, Greenville, Jersey City, N. J. This contest was for the 200-yard outdoor championship of Greater New York and vicinity. This match has been shot for several years past, and is regarded as one of the great events in the match rifle circles of this country.

While this particular contest is confined to New York City and vicinity, riflemen in different parts of the country have become so interested in the event that it is customary to shoot a similar match elsewhere, in order that their scores may be compared with the Eastern experts.

The event this year was a hard fought contest for supremacy. It was won by F. C. Ross, of the Zettler Rifle Club and the Elite Schuetzen Corps, formerly of Brooklyn but now of Chicopee Falls, Mass., his score being 2,238 points. The conditions of the match were 100 shots on the German ring target at 200 yards, off hand, a severe test of skill for any marksman. Mr. Ross attributes his victory largely to the powder he used, which is King's Semi-Smokeless FG brand, loaded in Peters Cartridge Co.'s Shells.

Dr. W. G. Hudson, of New York City, and L. P. Ittel, of Pittsburgh, Pa., winners of the second and third places respectively, used King's Semi-Smokeless Powder. The records of the contest show that the first nine men used this powder, and out of the sixteen contestants in the match, fourteen used King's Semi-Smokeless Powder, which attests the popularity and confidence placed in this powder. Peters' Metallic Cartridges are all loaded with King's Semi-Smokeless Powder and the superfine work with this ammunition shows how wonderfully perfect ammunition of to-day is made.

Weather Forecasts.

There have been more formularies by which to forecast the weather than we could keep in view. Upon consulting London Notes and Queries (1856) we find the following chunks of weather wisdom, which, we trust, will gratify our young correspondent:

A rainbow in the morning gives the shepherd warning. That is, if the wind be easterly; because it shows that the rain cloud is approaching the observer.

A rainbow at night is the shepherd's delight. This is also a good sign, provided the wind be westerly, as it shows that the rain clouds are passing away.

Evening red and next morning gray are certain signs of a beautiful day.

When the glow worm lights her lamp, the air is always damp.

If the cock goes crowing to bed, he'll certainly rise with a watery head.

When you see gossamer flying, be ye sure the air is drying. When black snails cross your path, black clouds much moisture hath.

When the peacock loudly bawls, soon we'll have both rain and squalls.

When ducks are driving through the burn (brook), that night the weather takes a turn.

If the moon shows like a silver shield, be not afraid to reap your field.

But if she rises haloed round, soon we'll tread on deluged ground.

When rooks fly sporting high in air, it shows that windy storms are near.

If at the sun rising or setting the clouds appear of a lurid red color, extending nearly to the zenith, it is a sure sign of storms and gales of wind.

Thousands Dead and Dying.

Thousands of once prominent brands of goods are dead or being killed by the great army of imitators.

Anyone simulating your label or package is robbing you, and can be stopped.

Don't be among those whose business is being ruined by Trade Mark Pirates.

The only organization that can help you, is

> THE INTERNATIONAL TRADE MARK PROTECTIVE COMPANY.

320 Broadway, New York, N. Y.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hard-

ware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and com-

panies and their various changes in the manufac-turing line. All the new stores and business news among the jobbers and retailers of the country;

with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line. For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its authorithers.

subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold. It has just completed its tweaticth volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

convictions.

CHATILLON SPRING SCALES.

UR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

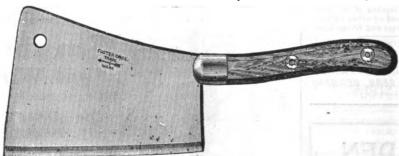

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. HARDWARE

At a recent meeting of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership therein:

Alfred F. Conklin, 66 Reade Street, New York. William A. Lewis, 82 Chambers Street, New York. Benjamin S. Alder, 37 Warren Street, New York. Lewis E. Pierson, Chambers and West Broadway, New York.

C. E. Jennings & Co., 101 Reade Street, New York, have recently published a special catalogue of Tool Chests and Cabinets, which should be in the hands of such dealers as are giving the Holiday trade and its requirements close attention. It will suggest a line of goods for an active stock that commands attention on account of its utility especially at this time.

The largest mercantile corporation on the Pacific coast, which it is reported will be formed at the beginning of the new year, when the George W. Gibbs Co. and Miller, Sloss & Scott, of San Francisco, Cal., will unite. The corporation will have a capital stock of \$10,000,000. The Gibbs Co. deals in iron and steel and Miller, Sloss & Scott, in general Hardware. Each department will be conducted separately, but under one general management. The company does business as far East as New Mexico and as far North as Alaska, while it has a growing trade in Hawaii and the Philippines. Branches will be established in Los Angeles and Seattle.

The National Vise and Tool Works, Camden, N. J., have just shipped to Honolulu, Sandwich Islands, a large number of Snediker Blacksmith Leg Vises and XL Vises; they have recently exported the same line of goods to London, England, Glasgow, Scotland, and to various points in India.

The Star Enamelling and Stamping Co., which went into the hands of receivers in September, has been reorganized by C. E. Christman, and associates, who purchased all the assets, except book accounts, from the Pennsylvania Trust Co., receivers for the former company, and have secured a charter under the laws of New Jersey with a capital stock of \$100,000. A directors' meeting was held at the offices of the company in Allegheny, Nov. 27, when the following officers were elected: C. E. Christman, president and general manager; J. Roth, vice-president; A. F. Loeb, treasurer; George W. Rowbottom, Jr., secretary. The new company is arranging to largely increase the facilities for the manufacture of their products. The factory was put in operation Nov. 18th, and they report that the demand for their goods is so very large that they are now running their factory day and night. There is no truth in the report that the new owners contemplate removing the factory to McKeesport.

Enterprise Brush Co., 46 West Broadway, New York, have moved their factory plant from Glen Gardner, N. J., to 536-540 West Fourteenth Street, New York. This company are well known as manufacturers of an exceedingly complete line of Brushes specially made for household use, they also make a general line of Brushes, including those for painters. The sample room at 46 West Broadway, near Park Place, will be continued for the accommodation of the trade.

We notice that articles of incorporation have been filed at Springfield, Ill., by the Search Light Mfg. Co., with a capital stock of \$40,000, with offices at 175 East Division Street, Chicago, Ill. This firm, formerly a co-partnership, has been successfully engaged in manufacturing Search Light Vapor Lamps and other trade specialties for nearly three years. They started in a very modest way, but have expanded four times, trebling or quadrupling their space at each expansion. Their success is largely due to the manner in which they have stood behind their goods, guaranteeing them absolutely even in cases where the fault could plainly be traced to carelessness or misuse on the part of the user of the lamp; and to the superior construction of their burner. An illustrated catalogue and price list which they publish will be mailed to the trade upon application.

The officers of the new firm will be Howard E. Clark, president; Paul Clendening, vice-president; Ernest C. Gridley, secretary, and William A. Burch, treasurer. As we understand the new firm intend to carry out the policy which has been so successful thus far, we confidently bespeak for them continued success and growing appreciation by the trade.

The widespread popularity of the Warren System of Hardware Shelving is shown by the following recent purchases of it for large outfits: Zion Co-Operative Mercantile Institution, Salt Lake City, Utah; Fairfax Bros., Bristol, Tenn.; C. Newman, Hampton, Neb.; Geo. S. Orcutt, Ashland, Me.; E. G. Kerth & Co., Anna, Ill.; Levy Bros., San Mateo, Cal.; J. D. Barry Hardware Co., Clarksville, Tex.; E. B. Messer & Sons, Hartley, Ia.; Mayer, Gulde & Welp, Bancroft, Ia.; Peschke & Prakel, Versailles, O.

Metric System now in Use in Twenty Countries.

It is stated by United States Consul Haynes, of Rouen, France, that the metric system is to-day compulsory in twenty countries, representing more than 300,000,000 inhabitants: Germany, Austria-Hungary, Belgium, Spain, France, Greece, Italy, Netherlands, Portugal, Roumania, Servia, Norway, Sweden, Switzerland, Argentine Republic, Brazil, Chile, Mexico, Peru and Venezuela. Although the United States has not yet adopted the metric system in its domestic transactions American manufacturers are almost universally prepared to furnish quotations to foreign buyers in metric terms and to conduct their correspondence accordingly.

The Marshall-Wells Hardware Co.

To mark its occupancy of the finest building which any wholesale Hardware company in this country can claim as its home, the Marshall-Wells Hardware Co., of Duluth, Minn., has issued a souvenir entitled, "Where Rails and Water Meet." It is a handsome specimen of the printer's, photographer's and lithographer's arts, in fact it might well serve as a specimen of the highest that has been attained in those lines. Views of the building and various features of its interior form a considerable part of the work. Especially striking to wholesale men will be the views that show the railroad facilities through the center of the building, and the water front at the rear with vessels discharging freight directly into the building. The significance of the title is easily seen.

Another interesting feature is the map in the center showing the territory covered by this company. It extends through Wisconsin and Michigan on the east up into Canada and westward to the Pacific coast, and is a fine representation of the position of Duluth as a distributing point.

HARDWARE

VOL. XXIV.

DECEMBER 10, 1901.

NO. .5

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade.

HARDWARE is published on the 10th and 25th of each month. The subscription is \$1.00 a year, payable in advance.

Subscriptions may commence with any issue.

Remittances should always be made in the safest manner available to the remitter. Post-office and Express Money Orders are always safe and may be sent at our own risk.

Register your letters when you remit by cash.

Fereign Subscriptions.—For each copy to be mailed outside the United States, the Canadas, and Mexico, the price is \$1.50 a year, postage prepaid.

Change of Date.—It takes two weeks to change the date, after your subscription is renewed.

Expiration of subscriptions. The date on the wrapper indicates when your subscription expires.

Change of Address.—Always give both your old and your new address when you ask us to change your address.

The Name of your Post-office and of the State you live in should always follow your own name when writing to this office. We cannot find your name on our books unless this is done.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

A very satisfactory trade is being done by the jobbers, as the retailers are buying freely such Winter supplies not already in stock as form the bulk of the sales at this time of the year. The goods called for include those which have been in scant supply for some time, but are now coming forward a little more freely. The demand continues excellent for an attractive assortment of novelties for the high-grade holiday trade anticipated on every hand, and the indications are substantial that a great deal of money will be disbursed by those profiting from the prosperous conditions surrounding the continuous employment which has been a noted feature of 1901.

Wholesale merchants are already making preparations for the annual stock-taking which is customary during the current month for those houses which close their year's business on January first. This, with the filling of orders for current supplies, will provide employment enough for all concerned. The general expectation is that the profits of the year will be found equal to anticipations, and prove sufficiently attractive to wish for a continuance during 1902.

Speculations regarding the future trend of business, especially the Spring trade now rapidly approaching, form subjects for contemplation at this season: The possible demand to be supplied, the prevailing prices and as to their continuance; the possibility of deliveries being prompt, and the multifarious things that agitate the mind

of the buyer whose orders for the future must be placed now or never.

The business done in November was unusually good for that month, although hardly up to the big figures for October. The general demand for the regular line of goods is, of course, of the greatest importance, as by such sales the inference is made that such stock is kept moving and must be renewed in due season. The excellent weather everywhere prevailing has had a great deal to do with the steady demand, which is referred to with confidence as an indication of an active Spring trade.

Builders' Hardware is in especial request, and a volume of goods is being ordered for the future that will give the greatest encouragement to the makers of this characteristic line of advanced supplies. Building has been actively carried forward with energy and perseverance, the open season greatly assisting the laudable endeavorsof the builders.

Snow and ice in the Eastern States have put in an early appearance, and the atmospheric conditions remind one of the old-fashioned Winters we read about. Skating is good quite early in the season, the ponds being frozen over and the hearts of the skaters filled with joy. Collections are reported as being good.

Exportations of Manufactures.

Exportation of manufactures from the United States continues to show a healthy growth in nearly all important articles except copper and iron and steel. The export figuresjust made public by the Treasury Bureau of Statistics show that in the ten months ending with October, exports of copper have fallen about \$23,000,000, and of iron and steel about \$23,000,000, making a total reduction in these two classes of \$46,445,685. The total reduction in exports of manufactures of all kinds during the same time is only \$44,162,856. thus showing an increase in the exportation of manufactures as a whole, exclusive of these two articles, copper and iron and steel. The value of copper exports in the ten months ending with October is 45½ per cent. below that for the corresponding months of the preceding year, and the value of iron and steel exports is 21½ per cent. below that for the corresponding months of last year. In the other manufactures, taking the entire group except copper and iron and steel, there is, as already indicated, an actual increase. In the case of iron and steel the reduction is partly due to reduced prices per unit of quantity, in part to a reduced demand abroad, and in part to forced sales at low rates in certain foreign countries. Incopper the reduction is not due to reduced prices, the average value per pound of the copper exports of the ten months of this year being the same as that of the corresponding months of last year, viz., 16.3 per cent. per pound. The reduction in copper, therefore, is in quantity, the exportation of ingots, bars and plates falling from 300,160,141 pounds in the ten months of 1900, to 162,728,397 pounds in the corresponding months of 1901. This falling off in the case of copper is due in part to a reduced demand in the European countries which were the chief foreign market for American copper, and in part to an increased production in other countries and reduction of prices by foreign producers. The only other important article showing a material reduction is mineral oil, which is about three million dollars less than in the corresponding months of last year; but this decrease is solely due to reduced prices, the number of gallons exported in the ten months ending with October being 60,289,023 greater than that for the corresponding months of the preceding year.

The following table shows the principal manufacturers whose exports during the ten months ending with October,

1901, show an increase as compared with the corresponding period of 1900:

How Publicity Aids Invention.

American manufacturers and mechanics have remarkable facilities and opportunities for ascertaining the improvements and inventions in their own particular line as well as in other lines which comprise special manufacturing manipulations and which directly or indirectly conduce to successful competition, says Modern Machinery. Any manufacturer can ascertain what his competitors are doing, not only by the sale of products, but also by the general publicity given by critical report and the showings of the industrial press. For instance, a manufacturer brings out a machine tool having ingenious mechanism to give certain results, advantageous both in operation and economy of time. This sets another manufacturer to thinking and he sets to work to surpass what has already been done. Therefore, there are two factors in industrial progress, namely, one in the willingness of manufacturers to lay open their inventions and methods to the public, and another in the readiness of the industrial press to illustrate and describe minutely all the peculiarities and details of these improvements.

Tax on Bicycles in France.

Over a million dollars collected on 739,335 wheels last year. The American consul at Lyons, France, informs the State Department in a letter just received here that the minister of finances of France has just published the statistics for 1900 of the number of bicycles in use in France and the amount realized from the tax on them.

The total number in the eighty-six departments at the close of the year 1900 was 739,335. The total tax on these wheels for the year was \$1,094,995. The total number of bicycles in use and registered during the last seven years is given as follows: 1894, 203,026; 1895, 256,084; 1896, 329,816; 1897, 408,869; 1898, 483,414; 1899, 838,856; 1900, 987,130.

Death of Henry Howard Beach.

Henry Howard Beach, who for 25 years and over has ably represented the interests of John H. Graham & Co., died at his home in Newark, N. J., Sunday, December 1st, of a complication of diseases from which he had long been a sufferer, originating from a severe strain he had several years ago.

His earliest occupation was in a broker's office in Wall

BENRY HOWARD BEACH.

Street, but his mind was too active to be satisfied with a field so limited. Selecting the Hardware business for his life vocation, he entered the employ of the Russell & Erwin Mfg. Co., starting in as stock clerk and finally reaching the entry desk.

In 1874 he connected himself with the Hardware jobbing and commission house of J. Clark Wilson, 81 Beekman Street, but as they retired from business a year later, he joined, as entry clerk, the forces of the house he was with at the period of his demise. The house was then known as Graham & Haines, and located at 88 Chambers Street. Two years later, in 1877, he was made salesman, becoming a traveling representative, a position held by him from that time. Mr. Beach was highly esteemed by those associated with him in business, who found him invariably conscientious, energetic and faithful to every trust reposed in him. The intercourse with the trade he had established in the interests of his house was marked by an honest adherence to principle, a faithful conservation of the rights of the customer and fidelity to the interests of his house.

His domesticity in home affairs was a prominent characteristic, always extending a helping hand, making ample provision for every want, and receiving that reverent esteem from those dependent upon his exertions which his sympathetic nature so fully deserved.

He leaves a widow and three daughters, two of whom are adults, the youngest being about ten years old.

The funeral services were held from his late residence, Wednesday, December 4.

KNAPP & SPENCER Co., Sioux City, Iowa, have recently issued their annual Want Book, designed to be hung beside the desk of the party who receives it, and to be filled with daily wants as their stock becomes depleted. There is no effort made to make this apply to any specified dates. It is gotten up with the suggestion at the top of each page in regard to goods or store methods, the intention being that every page in the Want Book shall be filled in the course of the year. It will undoubtedly be found very useful to the party receiving it.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. '277 Broadway, New York City.

Payment of Legacies.

QUESTION: My father died March 2d, this year, and the will was admitted to probate April 17th, father appointing me his executor in conjunction with a certain trust company. I understand from the company, I receive no money until the year is up. I have been sick for the past month and unable to make a living. Will you kindly state how I can get any money to support my family through this Winter?

REPLY: It is not quite clear from your question whether you refer to the time that you will be able to receive your commissions as one of the executors of your father's estate, or whether you refer to a legacy to be received by you under the will. The settlement of an estate generally takes a year or more, and the payment of legacies cannot be enforced earlier than a year from the date of the granting of the letters testamentary. The reason of this, however, is to allow ample time for advertising for the creditors of the deceased, as the debts must be paid before the legacies. If you are unable to convince the trust company which acts as your co-executor, that the deceased has no debts or that the assets of the estate exceed the liabilities, the trust company might be willing to consent to the payment of your legacy without waiting for one year to expire.

Liability of Assignee of Lease to Landlord.

QUESTION: Some time ago I rented part of my store to a man whose credit I investigated and found to be very good. His lease still has four years to run, and there is a provision in the lease that he shall not assign or sub-let without the written consent of the landlord. He has since come to me and stated that he desires to assign his lease to another man, whose credit, he says, is as good as his. I should like to be informed whether by consenting to the assignment of his lease my original lessee would be discharged from any liability on his lease to me.

REPLY: We are of the opinion that in this State, when a lease provides that the lessee shall not have the right to assign except with the written consent of the landlord, if the landlord consents in writing, the lessee would have the right to assign his lease; but would not thereby be discharged from his liability to the landlord. If, however, you can obtain an agreement from your lessee that by your consent you do not waive your right to proceed against him for the unexpired term, we see no objection to your accepting his proposition.

Liabilities of Directors for Failing to File Annual Report.

QUESTION.—I have been a director of a corporation which has failed to file its annual report. A creditor of the company to a large amount threatens to sue me individually and not the other directors, for the full amount, simply because I am good for the sum and the others are not as accessible as I am. Kindly inform me whether the whole amount of the creditor's claim could be collected from me, and if so, whether I have any redress against my co-directors.

Reply.—Under the corporation law each director is individually liable for the failure to file the annual report and upon the facts before us, provided the debt of the creditor accrued during the time in which you were director and the default as to the annual report occurred during this same period, the creditor could collect the full amount of his claim from you. As to your redress against your co-directors in the event of your paying the full amount of the claim, we would say that Chapter 354 of the Laws of 1899 provides that any director who shall pay any debt of the corporation shall be subrogated to all rights of the creditors in respect thereto against the corporate property (but not against the stockholders of the corporation), and shall also be entitled to contribution similarly liable for the same debt and the personal

representative of any such director or officer who shall have died before making such contribution. This provision of the Laws of 1899 is an amendment to the Corporation Law, and was passed for the purpose of allowing directors situated as you seem to be to collect the proportionate part of each director upon his paying the claim of the creditors in full. The provision as to obtaining contribution from the personal representative of a deceased director is also an addition to the law, as the former law provided that the liability should cease upon the death of the director, and therefore the estate of the deceased director would not be liable. The Laws of 1901 have, however, made radical changes in the law affecting the liability of directors for failure to file an annual report in future.

The Indiana Retail Hardware Dealers' Association.

From the Secretary-Treasurer, M. L. Corey, of Argos, Ind., we have received the following information regarding the forthcoming Convention of the Indiana Retail Hardware Dealers' Association:

"The next meeting of the Indiana Retail Hardware Dealers' Association will be held in Indianapolis, February 19th and 20th. Headquarters will be at the Hotel Denison. This meeting promises to be the best and largest in our history. We expect to profit by past experience in arranging programme and discussions to the extent that no dealer who is progressive can afford to stay away. The social feature will not be neglected, but this year the entertaining will be done by the Association, without asking outside aid. We have received about 50 applications recently, and the feeling expressed by dealers of our State who are not yet members shows they are interested and appreciate our efforts. We ask every one expecting to attend and join us at our meeting to write the secretary at once, so that proper arrangements can be made. Quite a number of complaints have been filed this term, but nearly all are satisfactorily adjusted. Present conditions show more harmony between jobbers and dealers than heretofore (they are respecting his rights and grounds, with a very few exceptions), and find they gain by adopting this course.

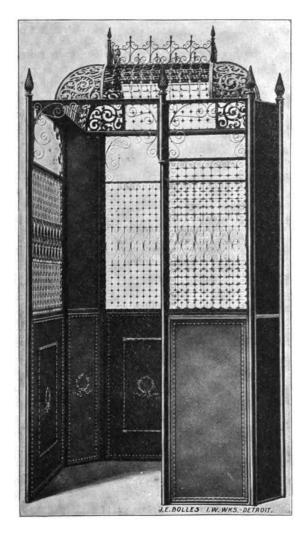

"Some trade papers claim that dealers are buying more from manufacturers direct than heretofore. This may be true in some places, but the contrary prevails. Some goods (specialties particularly) will always be bought direct from manufacturers, because, as a rule, jobbers cannot guarantee an exclusive vicinity sale contract. The jobber that caters to dealers only, and is not enjoying a good business, must look for some other cause for the difficulty. There are still a few jobbers who do not deserve our patronage, as their course demoralizes our business and encourages undue and illegitimate competition. They solicit the jeweler, druggist, grocer, department store, mill-man, blacksmith, lumberman, contractor and even the consumer; then expect the retail dealer to buy of them. A more absurd proposition would be hard to name, yet some dealers patronize them, knowing the conditions. Again we have a class of so-called wholesale and retail people, who use jobbers' rating in obtaining lower prices, abusing the privilege to dispose of surplus stock very often. The latter class are our worst price cutters. When the consumer states he wants to see 'Jones before he buys,' their regular statement is: 'He can't sell at this figure; why, he buys of us.' The Lindsay Hardware Co. recently announced their policy in a booklet sent out to the trade. They say: 'We will not sell to contractors, blacksmiths nor consumers of any kind under any circumstances. We do not try to get your customers, but will rather help you to keep them. We do everything we possibly can to protect the retailer. We do a wholesale business, nothing else.' This statement every association member must approve. We believe there is a more general disposition to act fairly, to sell better

goods on a profitable basis, to assist each other in supplying the entire wants of the consumer, instead of allowing this trade to go to mail order houses or bogus bargain leader concerns. There is a more friendly feeling and better understanding between competitors than ever existed before, and we welcome and encourage it all, for to this end associated effort has been directed."

Artistic Hotel Iron Work.

The Elevator Car design in the accompanying illustration was furnished by the J. E. Bolles Iron and Wire Works, Detroit, Mich., for the Prospect House, Niagara Falls. The cut shows how such work can be designed and finished very artistically, besides representing the latest features in construction. Their work in this line is highly esteemed, as their rapidly increasing trade from all parts of the country indicates. They have recently furnished some handsome

elevator enclosures for the eight-story Cumberland Apartments, Washington, D. C., and the Arlington Hotel, Marlin, Texas, besides numerous other contracts in this line from various parts of the country. The design illustrated is known as the Company's No. 236. They make a large variety of designs in this line.

Ohio Hardware Association.

A meeting of the Executive Committee of the Ohio Hardware Association was held at the Chittenden Hotel, Columbus, on the 19th ult. Of the members only A. C. Rohrbacher, of Akron, was absent. John F. Baker, of Dayton; J. P. Duffy, of Greenville, and H. C. Wiseman, of Springfield, were invited to meet with the committee and participate in making the arrangements for the coming convention. Messrs. Baker and Duffy were detained by illness. Ex-President Wiseman was present and gave valuable assistance because of his wide experience in such work. The members are very

enthusiastic and are determined to make the coming convention one of the best the Ohio Hardware Association has ever held. A local entertainment committee from the Hardwaremen of Columbus, consisting of E. L. Harris, J. H. Smith, W. C. Jones, O. L. Davis, Leslie Mithoff and W. A. Fearn met with the members of the Executive Committee, and kindly offered to render any assistance in their power.

The matter of insurance among the dealers was taken up and a committee appointed to investigate same. If found satisfactory the secretary was instructed to solicit and ascertain how many members could be interested, and also to find out how much money could be raised between the present time and February. The plans for entertainment and the programme of the convention were discussed at length and the visitors will have an interesting time, whether in the business or social sessions.

The programme for the convention on February 26, 27 and 28, is in hand and progressing rapidly. The association has prepared a booklet containing a list of members and also constitution and by-laws.

The Executive Committee is composed of O. M. Scott, Marysville, president; W. P. Bogardus, Mt. Vernon, vice-president; George M. Gray, Coshocton, secretary; W. C. Jones, Columbus, financial secretary; H. G. Woodward, Sidney, treasurer; George Guidon, Ada; Frank Winter, Lancaster; James P. Corson, Hamilton; J. W. Brown, Washington C. H.; George B. Meyer, Cincinnati; Harry F. Rohe, Cleveland; A. C. Rohrbacher, Akron; A. Strome, Warren.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interests to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED NOV. 25, 1901.

308,337. Spring Hinge, J. H. Alexander, Philadelphia, Pa.

308,338. Stove Brush, C. Barrett, Westfield, Mass.

308,561. WRENCH, J. Houlehan, Toledo, O., assignor to R. Fuller, same place.

308,581. LANTERN, W. S. Tryon, Philadelphia, Pa.

PATENTS ISSUED NOV. 26, 1901.

687,214. BOTTLE OPENER, S. W. Entreken, Philadelphia, Pa.

687,240. DINNER POT, C. F. Kaul, Madison, Neb.

687,327. SASH LOCK, E. Miller, Chicago, Ill.

687,346. Bolt, J. Speirs, Jersey City, N. J.

687,349. HINGE, B. B. Trundy, Dedham, Mass.

687,401. Screw Driver, C. M. Morse, Portland, Me.

687,484. PROTECTIVE DEVICE FOR WINDOWS, W. H. C. Matthies, New York, N. Y.

PATENTS EXPIRED DEC. 2, 1901.

308,633. PADLOCK, P. Seiler, Chicago, Ill.

308,643. LIFTING JACK, D. True, Salisbury, Mass.

308,678. ALARM CLOCK, J. W. Kohn, Newark, N. J.

308,686. CORK FULLER, W. H. D. Merrill, Colorado Springs, Colo.

308,703. FRET SAW HANDLE, C. Richardson, Newark, N. J.

308,728. SASH HOLDER, S. E. Anthony, Stillwater, N. Y.

308,739. HINGE, B. P. Bogy, St. Louis, Mo.

308,746. CARPENTER'S GAGE, A. J. Burger, New London, Wis.

308,749. Door Spring, E. H. Clark, Greenland, N. H. PATENTS ISSUED DEC. 3, 1901.

687,762. RULE, E. Lautenbach, Chicago, Ill.

687,841. SLIDE BAR FOR BENCH VISES, M. G. Lewis, New York, N. Y.

687,884. CLAMPING DOG, M. B. Hill, Worcester, Mass.

687,939. CAN OPENING DEVICE, C. E. Moore, Chicago, Ill.

688,003. SASH FASTENER, H. L. Norton, Middletown, Conn.

688,082. Door Check, J. M. Geary, Latrobe, Pa.

The Reciprocity Convention.

It has been asserted with confidence that there is a sentiment in favor of reciprocity growing throughout the United States, and there seems to be little doubt that the broad principle of reciprocity is recognized as an essential element in our future national development. The late President Mc-Kinley's assertion that "we must not repose in the fancied security that we can forever sell everything and buy little or nothing," was the fruit of much thought derived from an accurate knowledge of commercial and industrial affairs and a profound insight into human nature.

But even so, Mr. McKinley did not advocate the precipitous action which extremists would compel; he knew that any changes in our tariff policy must be made with the utmost care and caution, that no injustice be done to any American industry.

The deeper one goes into the subject the more convinced is he that circumspection must be exercised; the phases presented vary with the standpoint of consideration, and each industry has a different viewpoint.

It is evident, then, that mutual concessions must be made by conflicting domestic interests before it is expedient to negotiate treaties with foreign countries, and such action requires business men to rise superior to petty considerations; to sacrifice something to the general welfare.

In the light of an intelligent view of the subject the recent Washington convention, held under the auspices of the National Association of American Manufacturers, to consider reciprocity, was an example of the prevalence of a broad-minded spirit among patriotic American business men. The convention was eminently conservative and equally harmonious, and the adoption of the resolution recommending to Congress the establishment of a reciprocity commission, which shall be charged with the duty of investigating the condition of any industry and reporting the same to the Executive and to Congress, for guidance in negotiating reciprocity trade agreements, was both timely and wise.

This is assurance that no violence will be done any interest, but with full knowledge and understanding will come proper Congressional action, for the people will demand the exercise of the legislative power when they feel that it is desirable.—

The Iron Age.

Advertisting American Farm Machinery in Greece.

Under date of October 30, Consul F. W. Jackson writes from Patras:

I send herewith copy of a catalogue published in Athens in the interests of one of the large manufacturing establishments of America, and would call attention to the success achieved by this method of advertising.

The local agents of this company, in speaking of the business done in American agricultural machinery, says that four times as many machines were sold this season as last, in spite of unfavorable crop conditions, and he believes the coming year will establish a record for this country, in which the area of farming land is not extensive.

I would especially call attention to the need for American houses to be represented by industrious agents in the principal trade centers of Greece. The agents of European exporters are always on the field. In response to numerous inquiries, I am endeavoring to introduce a number of manufactured articles from the United States, which, I think, can find a good market here, and, once known, will becomes indispensable. With no one, however, to look after later details, and with no direct line of ships from America, the venture constantly hangs in the balance. Competent and reliable agents may be had in almost every trade center—men who are acquainted with English sufficiently for business purposes, as well as with French and Greek. They must, however, be shown that there is money for them in the venture

without the possibility of risk, and in the larger places an amount ought to be set aside for advertising purposes.

Germany's Colonial School.

Under date of October 22, 1901, Consular Agent Harris writes from Eibenstock:

Within the past two years, the German colonial school at Wilhelmshof, in Witzenhausen, has educated and sent twenty-five young men to German East and Southwest Africa, Kameroon, Togo, South Sea Islands, Ecuador, Brazil, Philippines, Cape Colony and Sumatra. The course of study given in this school is as follows: History, colonial economics, commercial politics, chemistry, botany, geology, natural history, tropical climates, tropical agriculture, bookkeeping and gardening, with special attention to raising vegetables, fruit and vines and forestry. A chemical laboratory, a blacksmith, a locksmith, a cabinetmaking, and other departments have been arranged where work is practiced as taught.

Corn Machinery.

Corn is the heaviest and most laborious crop raised and harvested on the farm, and yet it was the last for inventive genius to take up. It was some forty years after the advent of practical grain and grass harvesting machinery before a reliable corn harvester appeared, in 1895, but its introduction during the past six years has been marvelously rapid. It is estimated that about 35,000 were sold this year, and the demand could not be fully supplied, and that within a few years the annual sales will reach 100,000, as compared with 150,000 grain binders. Throughout the extensive cornfields of the West hand cutting is an impossibility, and hence the fodder has been largely wasted. The ears were allowed to ripen on the stalk, then husked, and cattle, etc., were turned in to finish the job. The corn husker and shredder made its appearance simultaneously with the harvester and the two are bound to work a complete revolution in Western corn farming. Shredded fodder, properly saved, is almost as valuable for feed as timothy hay, and with the harvester and shredder it is now estimated that the grain of the "corn belt" will hereafter represent clear profit, to say the least. It is likely that between 8,000 and 10,000 shredders will be sold this season, or nearly as many as the annual output of threshing machines. A shredder does duty on a great many farms in the course of a season, so it can be seen how extensively the practice of shredding is being adopted. The difficulty of preserving the shredded fodder in bulk is being overcome by the practical experience of farmers, just as the defects in the first machines put upon the market have been overcome by the manufacturers. It is estimated that two companies alone expended nearly \$1,000,000 in going through the experimental period of the corn harvester, but they will get it all back pretty soon. The corn binder and corn shredder are two of the most useful machines ever invented.—American Exporter.

Plowing Made Easy.

A test was recently made near Philadelphia of a new type of four-disc plow drawn by four horses which is capable of doing the work ordinarily requiring four men and eight horses. The implement is designed for plowing simultaneously any number of furrows from two to fifteen. The number of horses required is the same as the number of disks used, each turning one furrow, but in cases where more than four disks are used it is expected that traction engines will as a rule be employed.

The Old Man—Your love for my daughter seems to have grown very fast since you found out I was worth so much money.

The Young Man (admiringly)—No, faster, sir, than the subject warranted.—Detroit Free Press.

RECENT TRADE PUBLICATIONS.

AMERICAN RAILWAY SUPPLY Co., 24 Park Place, New York, have recently issued for 1902 distribution a catalogue of the goods manufactured by them, and which would naturally come under the head of railway supplies, including Baggage Checks, Number Plates, Pay Checks, Tokens, Medals, Breast Badges, Cap Badges and Buttons and Hotel Checks; in fact, all kinds of stamped and embossed metal work. The catalogue is printed on excellent paper, with fine illustrations that show the articles in first-class shape, so that they may be thoroughly understood. Every style and description of baggage check or hotel check that would be apt to find sale are illustrated in the pages of the catalogue. Most of them are accompanied by the name of the hotel which has in all probability adopted that style. List prices are given throughout according to the quantity ordered, from 25 up to 100, and in all the customary styles. Included in its contents is also shown a large variety of metal Door Numbers, metal Door Plates, Trade, Plantation and Waiter Checks, Numbering Machines, Ribbon Dating Stamps, Registering or Counting Machines, Hand Tallies, Lead Seals and Presses, Hand Trucks, etc., etc. It is a very useful catalogue of its kind.

STARR Bros. Bell Co., East Hampton, Conn. Eighty-page pamphlet catalogue of patent Gong Bells, Engine Bells, Sleigh, Chime and Bicycle Bells, that form the product of this old company, which has been in existence over sixty years. The catalogue is well printed on good paper, showing all the usual styles and varieties of the bells enumerated above, list prices throughout, discount sheet to accompany the catalogue, and showing the fine line of Sleigh Bells of every description which have been among the noted products turned out by this company for too many years to count. Included in the contents are bronze metal Push Buttons, electrical mechanical Door Bells, Tea Bells in large variety, Hand Bells and Call Bells. In fact, almost everything in the bell line could undoubtedly be purchased from this company, as indicated by the contents of this important catalogue. They also publish in connection with the above an envelope size catalogue, covering their line of Bicycle Bells, which are exclusively shown in its pages, and intended for a wider distribution in a general way than is the larger catalogue. This also includes Automobile Bells, for which a demand at present exists; also an envelope size catalogue of Electric Gongs and Bells. The request for the large catalogue should be accompanied by one for the two smaller ones, which are of sufficient importance to make their reception desirable.

SARGENT & Co., New Haven, Conn., and 149-153 Leonard Street, New York, have recently published a 16-page folder, $13\frac{1}{2} \times 8\frac{1}{2}$ inches in size, sent out in the form of a legal document, inscribed, "Sargent's Gem Food Chopper: What? Why? How?" The early pages of the document in question illustrate and describe the Gem Food Chopper in all its various details, in connection with which a series of fourteen prepared advertisements is given of various kinds, shapes and sizes adapted for popular use by purchasers of the Chopper, to be used in the local newspaper or such advertising mediums as may be selected by the dealer. Sargent & Co. explain that these are all electrotypes in shape to furnish, and the dealer's name and address will be inserted in the space at the bottom of the advertisement free of charge on application, so that they may be used the moment they are received, in any advertising scheme recommended by the dealer for the extension of the sale of this popular specialty. The advertising methods adopted by this well-known company are of a character to impress the trade with the advantages of such a useful appliance as the one referred to. Every effort is made to extend the sales by affording the dealers handling the goods all the assistance possible in exploiting the useful features of the Chopper. This has resulted in largely multiplying the annual sales of this single specialty.

WHITE, VAN GLAHN & Co., 15-17 Chatham Square and 49 East 42d Street, New York, are distributing a very handsome brochure, admirably adapted to catch the holiday trade, printed on coated paper and filled with fine illustrations showing a line of Tool Cabinets, all of which, as the cover states, are "Tools, Not Toys," and which are referred to in the preliminary page as being of standard sizes, carefully selected for practical use, and bearing the impression of manufacturers whose names have always stood for best quality, every tool being fully warranted. The Cabinets are made of selected, well-seasoned oak, antique finish and polished, fitted with brass hinges and a two-keyed brass cylinder lock, the tools being held in place by special fastenings, and the drawer is locked when the door is locked. The unique construction of the Tool Cabinets shown is of a character to command instant attention. Nothing more suitable for household requirements could be thought of in connection with the holiday season than a well stocked tool cabinet, in which the character of the tools is the important feature. The prices named in connection with the different sizes of these cabinets are \$25, \$15 and \$10, and as the tools contained in each cabinet are fully warranted, the special requirements of the householder can be covered not only by his wants but also by his pocket book. It is a booklet very attractively gotten up, and sure to receive proper attention.

W. L. BARRETT, Bristol, Conn. Sixteen-page catalogue, oblong form, covering the line of Standard Glass Cutters which have long been manufactured by him. This is a catalogue recently issued from the press for the trade of 1902, and embraces in its assortment all the various styles of these useful articles now handled by the Hardware trade, and affording a fair profit from the fact that the manufacturer's prices are low by comparison with the retail distribution. Glass cutters of this description have now become a regular article of sale, and every Hardware store in the country is supposed to handle them. The different styles of handles are made to conform to the hand, imitating as nearly as possible those used in the old glaziers' diamonds, but instead of the diamond point they are fitted with a small, hardened steel revolving wheel, the sharp edge of which cuts in almost every instance as readily as the diamond. They are made in a variety of shapes and styles, some of which include the combination form: a Glass Cutter, Putty Knife and Point Driver; other styles, Glass Cutter and Putty Knife only. A number of these combination tools in some communities meet with a large sale from the fact that they may be applied to so many uses, and in this catalogue there are a half dozen different styles that would come under that head. Mr. Barrett also makes a Standard Glass Cutter with a circle sweep for cutting circles, rounding lights, etc.; also a Glass Tube Cutter, very handy for engineers, steam fitters and others desiring to cut glass tubes. This catalogue is one that should be in the hands of all Hardware dealers, those who are handling the goods and those who may be contemplating the same.

NEW GOODS AND SPECIALTIES.

The Standorette.

D. H. Allen & Co., Miamisburg, Ohio, are the manufacturers of The Standorette, an extremely useful article for various purposes, an advertisement of which will be found elsewhere in the columns of *Hardware*. It is manufactured from steel tubing, and the several parts are secured together in such a manner as to produce the lightest and strongest possible construction. There are no screws, bolts or nuts to unscrew; hence no screw driver or wrench is required while taking it apart or setting it up, and its total weight is 15 pounds. In Fig. 1 we give an illustration of The Standorette

artists or painters, the work being clamped to the top, and adjusted to any convenient height. It makes an excellent music stand, the top being provided with vertical adjustment, enabling the music to be held in proper shape for all purposes. As a sewing stand it will recommend itself to the ladies of the household, as it takes the place of the old-style-lapboard, with the additional advantage of having the board.

FIG. 1.

as it appears when ready for use. In Fig. 2 are given some of the details of its construction, by which it is seen that it is practically composed of six tubular pieces: One standard, four legs and one supporting arm, with wood top. The top of The Standorette is provided with four independent movements with automatic adjustments:

Vertical Movement—For adjusting to various heights.

Horizontal Movement—For bringing the top into convenient position or swinging it around out of the way.

Tilting Movement—For adjusting the top at any angle. The top is also pivoted in the end of horizontal arm and therefore can be rotated in either direction in order to keep same square to the front. By the combination of these movements the top can be placed in every conceivable position, and when the desired position is obtained the top is held automatically in that position. There are a number of uses to which this useful article may be applied, among which may be mentioned

FIG. 8.

self-supporting and enabling it to be swung into or out of position without removing the work. The company have full descriptions of its various applications embodied in their recent booklet and circulars, and have just issued a handsome lithographic show card 12 x 16 inches in eight colors, which they would be glad to furnish the trade, on application, with the confident assurance that the dealer would be sufficiently interested to add an article of such great utility to his stock, as the margin for profit on this product to the Hardware dealer is a very satisfactory one. It is made in several styles of finish, list prices of which range from \$6 to \$7.

Model Store Fixtures.

In the accompaning cuts we show two of the patented improved designs in store fixtures brought out by the J. D. Warren Mfg. Co., Chicago. In Fig. 1 are shown Drawers with Glass Fronts artistically arranged for displaying a sample of

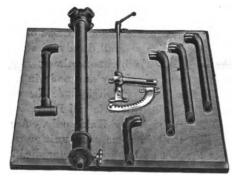

FIG. 2.

the following: As a reading stand for the library; as a book rest for convenience in copying or reference; as an invalid stand, which enables meals to be taken comfortably while in bed, for which particular purpose its utility is unquestioned, or as a card stand offering but little obstruction when in use for such purpose. It can also be utilized as an easel for

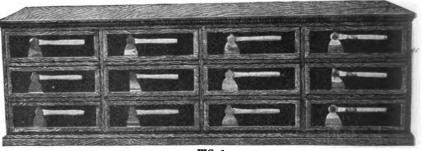

FIG. 1.

each of the various patterns of hatchets that may be carried in stock. Each drawer is divided for the different numbers, 1, 2 and 3, the sample answering for each. They also make a similar arrangement for unhandled axes, which it will be remembered was illustrated in *Hardware* a short time ago. The drawers are adapted in height and width to the size of

the axes, each drawer being calculated to contain one dozen assorted weights. In Fig. 2 a cabinet is shown which is designed for surplus stock. It is arranged with paneled drop leaves to increase its convenience. The compartments it is intended shall be numbered consecutively, the corresponding number being marked on the side of the drawer from which

sportsman's kit, which, in modern days, is a matter that would naturally recommend them. They are made in two shapes, one the egg-shape, as shown in Fig. 1, and another in what is called the barrel-shape, Fig. 2. The full size cut of the egg-shape is $2\frac{1}{2}$ inches in size and the barrel shape, 4 inches. The egg-shape is made in a number of sizes, run-

PTG 9

the goods are retailed. This arrangement enables a clerk with but limited experience to find the surplus stock without assistance. The number can also be registered in the index of any Hardware catalogue in use, placing it opposite the name of the indexed article. Thus, the manager at his desk is in a position to tell where any article in the surplus stock may be found, giving both the number of the drawer and also the compartment where the surplus stock is placed.

Patent Nyssa Fishing Floats.

J. M. Mast Mfg. Co., Lancaster, Pa., are the manufacturers of the Patent Nyssa Fishing Floats, illustrations of which are given in the course of this article. They have been manufactured to supply a general want that has been developed among those who use fishing tackle, and they are

ning from 1¼ to 4 inches in length, the barrel-shape being made in 1¼ to 6 inches. List prices and discounts will be promptly furnished by the manufacturers on request.

Mica Found in Vermont.

An inexhaustible deposit of mica has been discovered on the farm of Alonzo Estabrook, in St. Albans, Vt., by C. L. Stewart, of Rutland. The deposit, according to the expressed opinion of a number of geologists and mica experts, is undoubtedly one of the most valuable in the United States.

The mica was found to be in a vein of quartz about 15 feet wide and cropping out on the surface for a distance of over 25 rods proving that the supply is practically inexhaustible.

Active work toward getting out the product was begunabout three weeks ago, and in 16 days a force of but three

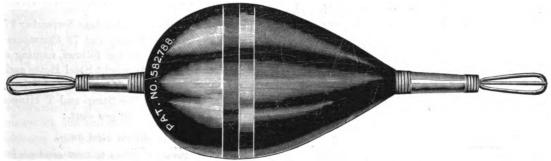

FIG. 1.

meeting the expectations of the trade in every degree. They will undoubtedly be found extremely good sellers in connection with this line of seasonable goods. These patent floats are made of the roots of the Nyssa tree, a material tougher, lighter and more buoyant than cork. The patented loop

men took out 6,000 pounds of the finest mica. Considering the size of the force and the fact that they were equipped with only a plant consisting of a six horse-power steam driller, a circular saw and a steam drill, their showing is considered remarkable.

PAT. No. 582.788. FIG. 2

tips make them readily attachable to the line and easily adjusted to the proper depth. These floats are claimed to be practically indestructible, as the wood is tough and the patent tips firmly fixed into the hardwood ends, all being well bound. They are very graceful in shape and are claimed to add immensely to the natty appearance of the

Prof. G. H. Perkins, State Geologist of Vermont, who has recently examined the deposit, is enthusiastic over it.

Mr. Stewart's plans for the carrying on of the work are, as yet, undetermined. Figures for the formation of a stock company have been prepared, but this move also is as yet undecided.—St. Albans Messenger.

REVIEW OF THE MARKETS.

Wire Nails: There is still an appreciably good demand for Wire Nails, although transactions do not represent large quantities. In the present condition of the Wire Nail market very little discrimination is made between good fair requisitions and ordinary specifications, quotations by outside mills having unsettled standard quotations in a measure, and made it more desirable to hold one's trade at little or no profit. Quotations are nominally held at the irregular prices given previously, although the market is anything but steady. Quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots\$2	20
" less than carload lots	80
To retailers in carload lots	80
" less than carload lots 2	40

New York: The trade without being especially large, is still an active one. The market may be said to be represented by the following quotations:

Cut Nails: A slackened demand is noticeable in the Cut Nail market as the active season draws gradually to a close. The market is firm at quotations governing sales for the month, already established, which are as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

New York: The New York market is steadily held at quotations previously prevailing, although the demand is a nominal one.

To jobbers	in carload lots on dock	.18
Small lote	from store	2.28

Barb Wire: The demand at the present time for Barb Wire having lessened considerably, an occasional concession from the nominal quotations so long prevailing is occasionally heard; such deviations from established prices, however, being too slight and infrequent to affect the general market, which remains as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers i	n carload lots, Painted	\$2.60
46	" Galvanized	2.90
44	less than carload lots, Painted	2.65
44	" Gaivanized	2.95
To retailers	in carload lots, Painted	.2.70
44	" Galvanized	. 8.00
"	less than carload lots, Painted	2.80
44	" Galvanizad	8 10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named.

Plain Wire: The business being done at the mills in the distribution of Plain Wire is largely in the interest of those manufacturing Wire products whose orders in anticipation of Spring trade demands, are now being looked after with some degree of interest. Slight concessions are occasionally made in order to obtain the early business. Regular quotations continue as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots\$2.25 less than carload lots 2.30	\$2.65 2.70
To retailers in carlots	2.75 2.85

The above prices are for the base numbers, 6 to 9. The

other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

No	B.					ire Adva		-			Galv	inised.
10						advance						extra.

Wrought Butts: Under date of November 27, manufacturers of Wrought Butts have issued revised discount sheets which show advances of about 10 per cent., as the base discount is diminished. The present base discounts on this line of goods are as follows, an extra discount of 20 to 25 per cent. being obtainable:

	Disco	
Table Hinges_and Back Flaps		60%
Loose Joint Butts		めいる
Narrow_Butts		60%

Cordage: The Rope market is without material change, and we continue the quotations named in our previous issue, which represent the present market:

Manila. 7-16 inch and larger	Pounds. Cents.
Manila, 7-16 inch and larger. 5 inch. 4 inch and 5-16. Sisal, 7-16 inch and larger.	
% inch	
Lath Yarn, medium and coarseJute Rope, No. 1	816

Linsced Oil: The following quotations are the latest announced by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.......56 cents per gallon. In lots of 5 barrels or more.......55 cents per gallon.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw. Calcutta Oil, 85 cents per gallon.

THE BALTIMORE TRADE.

Approaching the end of 1901, the third year of prosperity in business following the Spanish-American war, our thoughts naturally dwell upon the prospects and possibilities of a continuance, during the coming year, of this prosperity with which the trade generally has been so kindly favored, and barring some unforeseen calamity we feel quite sanguine, after considering the present conditions influencing supply and demand, that there are no breakers ahead for the next twelve months to come.

All farming products are and for a long time have been bringing lucrative prices; labor has found ready employment at good wages, the manufacturers have in many lines received more orders than they could fill promptly, and in some instances could fill at all, and the jobbers report a steady increase in the volume of business they are doing, while the retailer is thoroughly alive to the situation and hustling.

As success encourages renewed efforts for further success, so in the accumulation of profits is this illustrated most strikingly at present by the absence of price cutting. All seem to realize that profit can and should be obtained and are maintaining such selling prices as will ensure a legitimate and living profit.

While exceptions will be found as nature delights in changes, and a few will not observe business ethics, yet it must be apparent to the majority that we are having a rich harvest and should gather and store so that we might be prepared for a crisis that will certainly come in due course of time. The Government's attitude in the matter of protection and extension of our commerce stimulates industry and imposes confidence, and with a check upon monopolists our national and individual interests will be better preserved and our Ship of State continue to glide through smooth waters and in the well defined channels of prosperity.

Sales for the past month have been quite satisfactory, but are now, as usual, falling off to again begin, we hope, with customary vigor about the first of January. Prices remain firm and a few advances noted. Strap and T Hinges have risen 10 per cent., and there is strong probability that sisal rope, cotton rope and other cotton goods will shortly advance.

Collections are good and comparatively few failures reported in this section.

H. W. Webb & Sons.

THE PITTSBURGH TRADE.

Among the large industries of Pittsburgh is the river coal trade. Although the Monongahela has been for many years improved with locks and dams, making it available all the year, the Ohio is still waiting more liberal appropriations from the Government. Only a few locks and dams have been constructed as yet, consequently the river is not available for coal running below Pittsburgh, except upon freshets. The fall of snow and rain last week gave us coal boat water and over 10,000,000 bushels went out. This equals about 400,000

tons or 26,666 car loads of fifteen tons each. About the same quantity waits in the Pittsburgh harbor for the next freshet. There is no more important matter before our Government than the improvement of our internal waterways. If our Pittsburgh and Lake Erie canal were a fact instead of a future uncertainty, the present blockade on our railroads would be an impossibility, while the use of the Ohio River during the whole year would be of incalculable value to Pittsburgh and the whole Ohio Valley.

General trade continues very active, November showed a good increase over the same month last year, and December opens with indications of the same condition for the closing month of the year.

LOGAN-GREGG HARDWARE Co.

THE CLEVELAND TRADE.

Increase in the volume of business, added to an increase in prices, makes an increase in the circulating medium necessary. It was supposed that the amended Banking Act would largely increase the currency and provide this supply, and it might have done so, had business not largely increased, but we are still compelled to look to the Secretary of the United States Treasury to relieve stringencies in the money market, and the immense investments of the country are still dependent upon his action.

Such a condition is repugnant to every sense of safety. Notwithstanding the outcry that the banks are favored with special privileges in being allowed to issue currency, very few of them have accepted it by increasing their bond deposits.

It is believed that now is the time to complete legislation, providing for an adequate currency, based upon the legitimate law to supply the demand, leaving the Government out of the banking business. No more dangerous condition could be devised than to leave the supply of money to depend upon the decision of one man. No monarch could wish for anything more potent and it should have no place in a free country.

It is not wisdom to base so large a stake upon the integrity and wisdom of any official, as public and private interests do not always harmonize.

The indications show no decline in trade and the tendency is for an advance in prices, rather than a decline.

THE LOCKWOOD-TAYLOR HARDWARE Co.

THE ST. PAUL TRADE.

Conditions here are very good. Orders from all sections are very large and satisfactory. Prices are somewhat demoralized on staple goods, partly due to an effort of several outside jobbers to get into this territory, but such efforts are always short-lived, as the outside man is handicapped by the length of time it takes to get goods to customers, and, furthermore, the outsider does not enjoy selling goods at cost, and when he finds he must continue to buy his trade Ly making such low prices, he soon gets tired of it and stops. We believe that

the time will come when each jobbing center will not try to go outside of his legitimate territory and in that way business will be done on fair margins, and everybody will be happier. Our weather continues fine. No cold weather or snow has bothered us. Collections are coming in very nicely.

C. W. HACKETT HARDWARE Co.

THE DAVENPORT TRADE.

Will there be a hundred million dollar Hardware jobbing syndicate organized and successfully operated in this country? is a question that must be of vital interest to all. Will some of the Hardware contributors through your columns give any information they have on this subject?

There could be no more delightful weather for building and driving nails than now, and hence Builders' Hardware and nails are in active demand, and, in fact, the sales' footings continue to compare favorably with those of the corresponding dates of a year ago.

Traveling salesmen have been more numerous of late, indicating that in some lines, at least, manufacturers are catching up with their orders and may be again accumulating stocks. Collections satisfactory.

SICKELS, PRESTON & NUTTING Co.

THE COLUMBUS TRADE.

Trade continues good, but the weather is not favorable for winter goods and repeat orders are not coming in as they would if the weather were seasonable. It has been exceedingly dry for several months. In fact there has been but very little rain since the wet spell in June. Small streams are all dry and farmers are hauling water for stock or driving to large streams when near by. There has not been enough moisture to give wheat a start and unless rain comes soon, great hardships await all classes and the outlook for wheat will be poor. The nice weather keeps up the demand for Builders' Hardware and Mechanics' Tools. Prices on some lines are not firm. Especially is this true with Nails, Wire and Glass. The usual cutting on season goods has already begun and low prices are quoted on Steel goods, Screen goods and Poultry netting. There always are enough goods made by manufacturers whose reputation for quality is not the best, to demoralize prices. Some buyers will drop a standard brand that their trade want, and foist off an inferior brand with the inducement of a 5 or 10 per cent. better price. As a rule, the retailer has enough extra trouble in trying to convince his customer that the article is as good as the extra profit amounts to. It is a rare thing when he can get as much for the off goods as for well-known makes; he loses more or less sales and does not satisfy his trade, and as a rule has more goods to carry over. He buys the goods in the vain hope of being able to undersell his competitor, but does it pay in the end? We think not.

But one month remains of the year 1901, and we think dealers have had a very satisfactory year. Prices have been fairly stationary with few exceptions, and a dealer buying a stock did not have a general decline before he had time to dispose of it. Collections have been above the average and losses less frequent. We think as a rule balance sheets will be very satisfactory when inventory time comes.

THE SMITH BROS. HARDWARE Co.

THE OMAHA TRADE.

The unusual weather prevailing in this vicinity during the past sixty days has tended to materially change the ordinary course of trade. At this season of the year we expect, naturally, that sheet iron, coal hods, elbows, stove boards, skates, sleds, etc., will be in demand. These goods, however, have shown very uneven and sluggish movement, and in place there has been a heavy demand for nails, barbed wire and builders' Hardware.

A customer remarked yesterday that in his locality building was going on just the same as in the summer, and that contractors were figuring on new contracts, taking them just the same as though it was April in place of December. Notwithstanding these conditions, the volume of trade has held up remarkably well and no complaint comes from the country as regards trade or collections.

On the Ranges the weather has been exceptionally favorable for stock, and while the general trend of prices appears to be downward, we all realize the fact that some goods are higher than they should be and that a falling off in prices would result in an increased consumption and prove of benefit rather than detriment to the producer. An unreasonably high price on any line of goods is usually followed by an extremely low one, and all interests it appears are better satisfied, better served and better remunerated by a fair margin of profit for the manufacturer, jobber and retailer.

RECTOR & WILHELMY Co.

Exports of Wire Products in October.

Foreign shipments of trust-made American wire and wire nails, made through eastern ports during October, aggregated nearly 7,500 tons, almost 40 per cent. in excess of the consignments made in September.

Australia was the largest buyer of wire last month, twelve lots, amounting to 2,616 tons, and including a single shipment of 1,022 tons, having been forwarded to various Antipodean ports. The wire exports to South American countries were also especially heavy last month, the total shipments be-

THE BEST ROTARY **WASHING MACHINE?**

It is the only Rotary washer that has Revolving Steel Ball Gearing, reducing the friction and thus making machine so light running and almost noiseless.

noiseless.

The tub is made of Louisiana Red Cypress Lumber, cherry finish; the legs are solid with tub (not removable, breakable legs fastened with screws). The wheel turns right or left, pin wheel or dasher reverses automatically, turning the clothes back and forth through the hots ap-suds, and cleaning them without rubbing them to pieces.

This washer is made by experienced mechanics, and will out-last any other washer on the market.

The tub has a wringer box fastened with steel brackets.

The lid on the tub closes tight, no escape of steams.

ing 1,260 tons, distributed as follows: Buenos Ayres, 720 tons; Rosario, 214 tons; Brazil, 208 tons; Chili, 125 tons, while the rest was forwarded to Montevideo. The South African shipments aggregated 914 tons. Mexico took four shipments, representing 250 tons.

The exports to Europe amounted to 952 tons, of which the United Kingdom took 893 tons. The Continental European buyers were France and Sweden. Minor shipments were also made during October to Cuba, Bombay, China and Japan.

The export shipments of nails during last month amounted to 1,226 tons. Australia was the largest purchaser, 342 tons going to various ports in that part of the world. The exports to far eastern ports amounted to 211 tons, consignments to China and Japan aggregating 705 tons, while the remainder went to Bombay.

The total shipments to Europe were 269 tons. Following are details of the consignments: To the United Kingdom, 116 tons; Liverpool, 58 tons; Glasgow, 57 tons, while the rest was equally divided between Newcastle-on-Tyne and Leith. The shipments to Continental Europe comprised 73 tons, the ports to which consignments were made being Havre, Copenhagen, Trieste and Marseilles. South America took 124 tons of wire nails in October, Brazil being forwarded 115 tons, the balance going to Chili. Minor shipments also went to Mexico, Manila and South Africa.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

A Combination Mop and Scrubber.

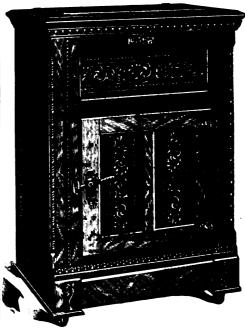

As the mop and scrubbing brush are both necessary adjuncts to the neat housekeeper's outfit, it has occurred to Edward Hilker, of Chicago, Ill., that the two implements might be combined with advantage into one article. The brush is permanently secured to the end of the handle by a hinge, which permits free movement in drawing the brush over the floor. At the end of the brush is a slot into which the tongue at the end of the wire bail fits to hold the cloth in position beneath the brush. The main feature of the implement, however, is the improved wringer attached to the handle, which makes it possible to twist the cloth until the water is wrung out, by simply turning a crank on the sliding carriage. Previous to wringing the cloth the bail is loosened and swung beneath the brush to bring the cloth in a straight line, the carriage sliding up the handle until the cloth is drawn tight. This position is also maintained when it is desired to use the brush without the mop.

The roller press, an idea of Nicholson's, was introduced in 1816.

Clymer's Columbian press was patented in 1817. Considered very wonderful.

Good Advertising an Important Matter.

There is advertising and good advertising. In other words, it is possible to spend large sums of money on advertising and to reap no benefits therefrom, and it is also possible to build up a large business by means of a gradual and properly developed system of advertising. Many kinds of advertising are open to manufacturers, but the advantages of using trade journals as advertising mediums are so obvious that we can allude to the subject without fear of being accused of self-interest. To reach the trade the trade paper must be employed, and to reach the cream of the trade the best journal and one which has attained a high degree of popularity should be selected. It is of little use to advertise the manufacturer's name and address, and with a brevity-not commendable-state that the advertiser "makes tools or implements." What is wanted is to impress readers with some special qualities of production, remind them of seasonable lines, lead them to ask for quotations, and either by judicious wording or pictorial illustration induce them to associate that firm and that firm alone as the best maker of those particular goods. The makers of novelties and specialties may go further, and stamp upon the minds of their readers the real sterling merit of the goods they offer, and above all, by illustration and description, leave a clear impression on the minds of all who study the advertisement of what the article is like, and to what extent it is likely to become popular. Goods should sell because of their merits, and a clear, living advertisement should be like a clearly explained description. Indeed, those who "live by advertising" say a properly drawn advertisement is equal to a verbal description by an eloquent salesman .- Ironmongers' Chronicle.

BOOKS YOU NEED IN YOUR BUSINESS.

Universal Dictionary of Weights and Measures,

Ancient and Modern, reduced to standards of the U. S. By J. H. Alexander—New Edition—Enlarged—Cloth Binding,

Link and Valve Motions Simplified,

Illustrated with 20 wood-cuts and 20 lithographic plates, together with a travel scale, and numerous useful tables. By W. S. Auchincloss—13th Edition—Revised—Cloth Bound,

The Mechanics' Friend,

A Collection of Receipts and Practical Suggestions relating to Aquaria, Bronzing, Cements, Drawing, Dyes, Electricity, Gilding, Glass Working, etc., etc. By W. E. A. Axon—Wood Cuts and Diagrams—Cloth, \$1.50

Hydraulic Motors, Turbines and Pressure En-

gines For the use of Engineers, Manufacturers and Students. By G. R. Bodmer—204 Illustrations—Cloth, \$5.00

Machinists' and Steam Engineers' Practical Cal-

Ctilator. Useful Rules and Problems arithmetically solved, and general information applicable to Shop Tools, Mill Gearing, Pulleys and Shafts, Steam Bollers and Engines, Tables and Instructions for Screw Cutting, etc. By D. B. Dixon—Morocco.

Dictionary of Manufactures,

Mining, Machinery and the Industrial Arts—By Geo. Dodd—Cloth Binding,

Skeleton Structures

Applied to the building of Steel and Iron Bridges—By Olaus Henirci—Illustrated, \$1.50

Iron Truss Bridges for Railroads,

The Method for Calculating Strains in Trusses, with a careful comparison of the most prominent trusses, in reference to economy in combination, etc. By Col. Wm. E. Merrill, U. S. A.—Illustrated—Cloth,

Modern Moulding and Pattern Making,

A Practical Treatise upon Pattern, Shop and Laundry Work; Embracing Moulding of Pulleys, Spur Gears, Worm Gears, Balance Wheels, etc. etc. Latest improvements in American Cupolas. Large collection of carefully selected Rules and Tables for every day use in Office, Pattern Shop and Laundry. By Joseph P. Mullin, M. E.—Hustrated—Cloth,

Toothed Gearing,

A Practical Hand Book for Offices and Workshops by a Foreman Pattern maker. 184 Illustrations—Cloth, \$2.25

Standard Electrical Dictionary,

A Popular Dictionary of words and terms used in the practice of electric engineering—350 Illustrations. By T. O'Connor Sloane—Cloth Bound, \$2.50

Electrical Transmission of Energy,

A Manual for the Design of Electrical Circuits. By H. V. Abbott—Cloth Binding

Electric Lamps and Electric Lighting,

Being a Course of Four Lectures delivered at the Royal Institution. By Prof. J. A. Fleming—Fully Illustrated—Cloth Bound,

WILL BE SENT POST PAID ON RECEIPT OF PRICE NAMED.

We will always be glad to furnish quotations on any technical work not found in the above list.

ONE OF OUR LATEST STYLES.

IT IS SUCH GOODS AS THESE THAT MAKE BUSINESS.

HE above cut illustrates our new swell front drop head sewing machine, which is equipped with our unequalled ball bearing stand. Nothing at all approaching this style of machine in elegance, attractiveness and convenience has ever been produced. The design (patented and controlled by ourselves) is distinctive, new and incomparably superior to anything else on the market, and marks the most advanced ideas in sewing machine construction. The beauty of the design can be only imperfectly shown by the cut. The long graceful curve of the table front and centre drawer with the rounded corners and round front end drawers bring out the grain of the woods most beautifully and are in line with the design of latest models of high-grade household furniture. Only the choicest selected patterns of Oak, Walnut, 'Sycamore and Mahogany are used, and the workmanship and finish are of a superior order. Very handsome bronze drawer pulls add to the richness and elegance of the effect, the whole resulting in a symmetrical completeness far beyond any former production in the Sewing Machine World.

THE STERLING SAW SHARPENER

For Jointing, Setting and Filing the Teeth of a Saw

Instantly secured to a work bench or other suitable support by means of a clamp and screw. In placing the saw in the clamp ready for filing the carrier is thrown back out of the way by means of a lock which is easily raised. Our filing device is a carrier moving longitudinally on the frame resting in front on a track and held in position by the lock. On one end of the carrier is the filing frame with indicator which gives depth of tooth desired as well as the angle for filing. On the upper face of the carrier block is a protractor with a scale which indicates the angle required, all being held firmly in one place when adjusted by a thumb-screw.

when adjusted by a thumb-screw.

On the end of the carrier opposite the saw frame is the setting device which consists of levers having dies to correspond with the number of teeth in the saw it is intended to file. This will set from two to twelve teeth at one operation as desired

In the jointing attachment, the new features of which there are many, we claim superior ty over all others. Under the carrier is a recess for a flat file which may be slipped in from either side and is held in place by means of set screws passing through the shoe and inpaning the edge of the file.

ALL PARTS INTERCHANGEABLE.

EVERY TOOL GUARANTEED.

HARDWARE

W. H. Cole, of Tower & Lyon, 95 Chambers Street, New York, intends making his usual trip to the Pacific Coast, leaving New York on Dec. 31st. He anticipates being absent about eight weeks, and will visit the principal places of importance in the Northwest, including British Columbia, Portland, Ore., and Montana. Mr. Cole, representing as he does the interests of the Union Hardware Co., as well as the products of other manufacturers controlled by Tower & Lyon, will find a welcome awaiting him among the jobbers of the West that will undoubtedly be productive of many orders.

The Winchester Repeating Arms Co., New Haven, Conn., for several years have annually expended a good deal of money in distributing a handsome souvenir calendar, calling attention to their important production. This year they have decided to discontinue the custom, as it no longer possesses any feature of novelty, and the present healthful condition of their order books makes such extra advertising unnecessary.

The Marlin Firearms Co., New Haven, Conn., have this year issued an envelope-size desk calendar for general distribution, which they will send to any of our readers on receipt of a single stamp to pay postage. It is appropriately devoted in its artistic treatment to fancies characteristic of the sportsman, and is handsomely printed in twelve colors by one of the leading lithographers.

In a circular to the trade dated Dec. 2, the Rogers Screw Co., Providence, R. I., announce that they are now prepared to furnish all sizes of Wood Screws in flat and round heads in steel, brass, bronze, and in the numerous finishes required by the trade generally. The company announce the fact that they are confining their production to Wood Screws only. The following representatives of the company in different parts of the country will carry the leading goods in stock: Warner & Rucker, 88 Chambers Street, New York; Tabb Bros. & Co., 5 West German Street, Baltimore; Chas. M. Ghriskey's Sons, 508 Commerce Street, Philadelphia; Arthur Brittan & Co., 154 Lake Street, Chicago; Kemp & McMillan, 40 Dearborn Street, Chicago; S. J. Conger, 519 Mission Street, San Francisco.

At a recent meeting of the executive committee of the Illinois Retail Hardware Dealers' Association, it was decided to hold their next annual meeting at Decatur on Feb. 12th and 13th. The headquarters of the association will be at the St. Nicholas Hotel in that city, but the meetings will doubtless be held in the commodious Elks' Hall. Mr. Hirsch, of the Morehouse-Wells Co., and the local members of the Hardware fraternity entertained the committee hospitably while in the city, taking the visitors to the exceedingly attractive quarters of the Decatur Country Club.

The Missouri Retail Hardware Dealers' Association intend holding their next annual convention at St. Louis Jan. 21 and 22. E. Winter, who has been placed in the field as a State organizer, is doing good business soliciting membership for them.

The executive committee of the North Dakota Retail Hardware Association have decided to hold the fifth annual meeting of this association at Fargo, N. D., on Feb. 19 and 20.

The executive committee of the Minnesota Retail Hardware Association have decided to make the Hotel Ryan, St. Paul, their headquarters for their next annual convention, which will be held in that city Feb. 26, 27 and 28. The sessions of the convention will be held in the Hotel Ryan Annex, and an elaborate banquet will be given the visitors at the hotel on the evening of Feb. 27. J. P. McGuire, St. Paul; Benjamin Kernkamp, St. Paul; H. S. Cleveland, Minneapolis, and Thomas McCracken, Minneapolis, were appointed a committee to fully arrange for the entertainment of the delegates.

The H. F. Brammer Mfg. Co., Davenport, Iowa, manufacturers of the O. K. and O. I. C. Washers, report their business during the past year as having been an exceptionally good one, the number of machines manufactured and disposed of being nearly double that of the year previous. They regard the outlook for 1902 as a prosperous one, as even at present it is difficult to keep up with orders.

A great deal of money appropriated for advertising through legitimate channels has been in recent years diverted to other forms of exploiting, that of issuing artistic calendars proving a very attractive one. As usually but one or two of the numerous calendars received by the dealer ever reach the position of advantage contemplated by the advertiser, this form of advertising has seemed like wasteful extravagance, and will this year possibly be less prominent as a trade winner.

Waterman Hardware Co., Geo. Waterman, president and treasurer, Albany, N. Y., have lately opened a new store at 141 South Pearl Street. They intend carrying a full line of Hardware, mechanics' tools, kitchen utensils, and other house furnishing specialties, &c., and would be pleased to receive catalogues from manufacturers and jobbers covering these important lines.

The Harrington & Richardson Arms Co., Worcester, Mass., are distributing, commemorative of the season, a very handsome calendar for 1902, being a facsimile of a pastel drawing of "The Hunting Girl," executed in an exceedingly artistic manner by Malcolm Stewart, and worthy of preservation in the interest of art as well as mechanical excellence. The company state they will gladly mail one of these calendars to any of our readers who will mention *Hardware* when requesting the same. We hope this opportunity will be taken advantage of.

In The Carpenter's Kit.

E. C. Atkins & Co., Indianapolis, Ind., are distributing some attractive leaflets for general circulation by the dealers handling their goods, consisting of a folder so arranged that when folded it shows a carpenter's kit of tools in the customary tool tray carried by the skilled mechanic, in which an Atkins' Hand Saw shows up prominently. The reverse side shows an interior view of a carpenter's shop with three workmen, apparently discussing the merits of the Atkins' Hand Saw, held by one of them. These leaflets are lithographed in colors, and will undoubtedly do good work under novel conditions.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted Exclusively to the Hardware Trade.

Editorial Trade Review.

The advent of zero weather, sufficiently in advance of Christmas to encourage seasonable purchases, results in a rush for many grades of goods, the sale of which has been retarded by the desire to wait until necessity stimulates the demand. Skates have found eager buyers and stocks have diminished rapidly, making some sizes scarce. Sleds have been turned out of the jobbers' stocks under hurried orders, until the wholesale stocks are well depleted, with no prospects for new supplies.

Spring orders are being placed largely for Wire Cloth and Screen Goods. The complete destruction of one of the largest manufactories, including a heavy stock of Wire on hand, is taken as an indication for a shortage in the supply not previously considered. Buyers are fearing any change toward lower prices much less than the certainty for prompt deliveries on dates specified in orders.

This time of the year the demand for heavy goods is less apt to be apprehended, the requirements in so many lines advantageously relied on for holiday sales, causing a lack of attention to the stock of factory supplies. Some few changes are noted, usually of a strengthening character, in heavy goods, many orders for which have already received attention for Spring demands.

The steel and iron markets continuing very firm, and light stocks throughout the country largely prevailing, would seem to argue stable quotations for the early part of 1902 without doubt. Those handling wire fencing of

special grades will profit by the experience of a year ago, and this year place their specifications early.

The high prices prevailing for cereals, cotton, etc., will stimulate a good trade in the Spring on general lines, and the industry is well prepared to take advantage of the opportunities offered for encouraging purchases of supplies that will be urgently needed by the prosperous consumer.

The organization of a labor tribunal, fostered and encouraged by the ablest minds, who have devoted their best efforts to the accomplishment of industrial peace, will insure a year of prosperous conditions surrounding every important field of labor. No prolonged strikes, no interruption to production, peace between the demands of capital and labor, will make a year memorable for its industrial productiveness and steady wealth-producing possibilities. The hardships that frequently spring from the exactions of incorporated capital will fall into insignificance before a tribunal delegated to act upon it, and no political party will ever be expected to provide a panacea through the uncertain media of a change of administration.

The year's business will be brought to a close with fewer back orders left unfilled than was the case a year ago. The excellent business which has been evident on every hand during this month has made it difficult for the jobbers to make the usual progress in the annual inventory, the results from which are looked forward to with more than ordinary interest. Let us hope the desired profits will be found as great as the current estimate places them.

Electrical Education.

The subject of electrical education, states the *Electrical Review*, is one of the utmost importance to the future of the art, and to the welfare of those who enter the profession in any capacity. It is therefore well to call attention to certain phases of it very generally overlooked, and to which, from their importance, it is hardly possible to give undue care.

The teachings of the scientific or technical schools absolutely must be supplemented by practical, hard-work experience in the direction which is chosen by the student to be his career. A young man coming out of one of our best schools with the title of electrical engineer is not really fitted to practice that profession until he has spent a year or two in seeing actual practice from the inside—that is, by actually doing practical work with his own hands and applying to conditions as they really exist the knowledge he gained in the institution of learning. To the young man who has just graduated a certainty of this fact comes sooner or later, and unless he is prepared beforehand with an understanding of the conditions that he must face he is placed in a position of no little difficulty when he starts out looking for a situation. It should therefore be recognized that a year's work (often at exceedingly small wages) is really necessary to fit the technical graduate for entrance upon the career which he has chosen.

A mistake which is all too frequently made by young men in technical schools, and by their parents, is to neglect other branches of study while pursuing that relating directly to their profession. A good working knowledge of at least one other language besides English is of extreme value to an electrical man, and amply repays the trouble taken in acquiring it. To-day, perhaps, German is the most valuable, but if the student can master a good reading knowledge of French as well, he is fitted to take in all of the best of electrical literature from first hands, and also in many other ways better prepared to play his part in his chosen field of activity.

A good and thorough training in mathematics is practically essential to an electrical engineer. There is rather a tendency in the schools to make courses of instruction easy and to minimize the amount of mathematical knowledge required of students. This cannot well be regarded as anything but a mistake. While it is not likely that the average practicing engineer or shop superintendent or designer will use the calculus much in his professional work, still the mental training he requires in learning it, the amazing insight it gives him into all other kinds of mathematical processes, and the fact that many of the discoveries in electrical theory cannot be understood without a fair working knowledge of this branch of analysis, all combine to make it a practical essential.

It may be safely laid down, as a general rule, that a good education is the foundation upon which a technical course of instruction should be laid. A man who knows a good deal about electricity and nothing about anything else is not nearly so valuable or so likely to succeed as a man who knows half as much about electricity and has in addition a good general education and the degree of culture that goes with it.

In the United States we need at present two kinds of electrical men—skilled and thoroughly trained artisans, and men of high scientific attainments combined with, wide general culture. From the first class we may expect practical work of the utmost value, and from the second we may look for discovery and invention, research and calculation that will form the basis for the labora of ensuing generations of artisans. For the half-educated electrical engineer there is practically no place at all.

Montreal Metal and Hardware Manufacturers' Association.

The annual general meeting of the Montreal Metal and Hardware Manufacturers' and 'Merchants' Association was held Dec. 5 in the Montreal Board of Trade rooms, James Davidson presiding in the absence of the president, W. W. Near. The following officers were elected: President, J. W. Pyke; vice-president, J. C. McCormick; treasurer, George Caverhill; directors, F. Bacon, H. M. Blaiklock, G. A. Kohl and J. T. McCall.

A vote of thanks was accorded the retiring officers, and coupled with it was an expression of sympathy with Mr. Near, who has for several months been absent on account of ill health. The members present were unanimous in expressing a hope for his speedy recovery. James Davidson was chosen for nomination as the association's representative on the Council of the Board of Trade.

It was unanimously decided that hereafter an annual association dinner should be held, and William McMaster, T. H. Newman, George Caverhill, G. A. Kohl and George E. Drummond were appointed to make arrangements for the first annual function, to be held at an early date.

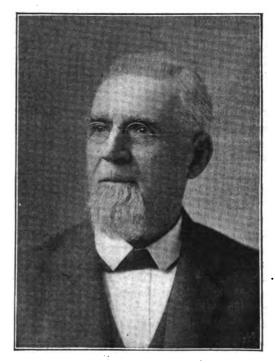

Ideal "Volumeter" No Infringement of the Kenny "Flushometer" Patents.

Readers of this paper may remember having seen a notice published in December, 1900, that the Kenney Co., of New York, had commenced suit against the Ideal Manufacturing Co. to restrain an illegal infringement of The Kenney Co.'s patents. The claim was that the Ideal "Volumeter" was an infringement of the patents covering the "Flushometer," a flushing valve. After the testimony was taken in the case, The Kenney Co. consented to a decree dismissing its bill without a hearing in court, conceding that on the proofs the "Volunteer" was not an infringement of its patents. The testimony conclusively showed the Ideal "Volumeter" was in structure and operation entirely different from The Kenney Co.'s flushing valve—in fact, of a different type or class.

Death of John G. Baker.

The distinguished inventor and manufacturer, John G. Baker, vice president of The Enterprise Manufacturing Co., Philadelphia, died on Sunday, Dec. 8th, after a lingering illness. Death was caused by that dread disease, cancer.

Mr. Baker as born near Princeton, N. J., May 11, 1833. He served an apprenticeship as a carpenter and later went to Washington, D. C., where he started business as a model maker for inventors. His first invention was a machine for making glaziers' points, which he later modified into a machine for toothing hand saws. He sold this device to Henry Disston, of Philadelphia, in whose employ he entered in 1861. He invented and carried into successful operation numerous machines for grinding various kinds of saws, and other labor-saving devices, while in Disston's employ. In 1864 he left Henry Disston and started in business with T. Henry Asbury in the manufacture of an indicator to save the reverse belt on screw-cutting lathes, under the firm name of Asbury & Co. He invented a self-measuring faucet for drawing and measuring molasses and other heavy liquids, which was largely sold throughout the United States. The firm of Asbury & Co. was dissolved and The Enterprise Manufacturing Co. was organized in 1866. Mr. Baker contributed some forty inventions to this last named company,

JOHN G. BAKER.

many of which are well known to the Hardware trade. He was also the inventor of the celebrated Baker Pressure Blower, now in use in many foundries and mines throughout the United States. For this invention he was awarded the John Scott Legacy Medal by the Board of City Trusts of Philadelphia, upon the recommendation of the Franklin Institute, in January, 1875. He continued in active interest with The Enterprise Manufacturing Co. until 1888, at which time he retired from business, although holding the position of vice president until the time of his death. He spent his summers at his residence at Edgewood Park in the Thousand Islands, and his winters at Asheville, N. C. He always was of an exceedingly practical turn of mind in all his undertakings, and even after his retirement from business he delighted in inventing devices to enable him more perfectly to pursue his pleasures. Among these were fishing tackle and photographic apparatus. He was of a genial disposition and has left many friends and no enemies. He is survived by a widow and a married daughter.

Sickels. Preston & Nutting Entertain Employes.

Sickels, Preston & Nutting Co., Davenport, Iowa, entertained the employes of that large wholesale Hardware establishment on December 14 with a dinner at Library Hall. It was a very charming event and some fifty odd were seated about the board, including, not only the employes, but a number of friends.

The dinner was served by Miss Cleaves, while Albert Petersen's orchestra discoursed beautiful music. Following the repast the main hall of the Library building was thrown open and the remainder of the evening was spent in dancing.

It was one of the charming annual events which it is the custom of the management of the store to give. It had been hoped that both Robert Sickels, who is visiting in Davenport, and A. J. Preston would be present, but owing to the severity of the weather and his ill-health, the former could not be present, while Mr. Preston sustained injuries from a fall on the previous Friday and was detained. Those present were:

Colonel and Mrs. J. R. Nutting, Mr. and Mrs. J. H. Whitaker, Mr. and Mrs. C. G. Raguet, Mr. and Mrs. J. F. Harrison, Mr. and Mrs. Theo. Neuhaus, Mr. and Mrs. H. Harbeck, Mr. and Mrs. A. Butler, Mr. and Mrs. A. O. Small, Mr. and Mrs. F. W. Neals, Mr. and Mrs. S. W. Searle, O. B. Grant, W. R. Turner, J. R. Preston, D. L. Marinan, Oscar Harbeck, Louis Brandt, Joe Dohm, Fred Kunkle, William Cardwell, C. G. Raguet, Jr., Elmer McNall, Ernst Wilckens, Chester Hulet, Frank Dohm, George Turner, William Brandt, Grant Nutting, Ralph Nutting, Marie Brandt, Pauline Brandt, Lydia Harrison, Harriet Brandt, Della Brandt, Belle Turner, Nellie Turner, Mary Turner, Harriette Turner, Frances Harbeck, Katherine Harrison, Josie Dohm, Gertrude Whitaker.

Peters Cartridge Co.'s Increasing Facilities.

The products of The Peters Cartridge Co., of Cincinnati, O., consisting of a full line of metallic cartridges loaded with the famous King's Semi-Smokeless Powder, a line of shotgun shells, consisting of shells for smokeless, semi-smokeless and black powder, primers, wads, and shot, have attained such popularity that for some time past that company has been unable to fill its orders without long delays. This condition of affairs has influenced that company to make extensive alterations in its plant and considerably enlarge its manufacturing capacity. It is now putting in additional steam boilers of large capacity, with two direct connected engines of 200 horsepower for the transmission of electric power, as well as a large electric plant. This company is now erecting two buildings of two stories in height, one 50 x 90, the other 50 x 50, besides a number of smaller buildings as well as additions to the existing buildings, all of which are expected to be completed by next spring. The improvements will also include a 2,000,000 gallon reservoir with large water mains connected with the automatic sprinkler system in the buildings, as well as a 1,000-gallon underwriters' pump. The object of these improvements, besides increasing the productive capacity of the plant, is to secure the greatest prevention against fires. The goods of this company are in demand at the present time in all parts of the world, and besides a great increase in the home trade there is a rapidly growing foreign demand for Peters ammunition.

In the course of re-opening a disused pit at Blair Burn by the Wemyss Coal Co., some miners' tools and a few wooden shovels, such as were in use 300 years ago, have been discovered. The shovels are all made of wood, some of them being as good as the day they were made. The picks and mells are iron. It is further stated that there are huge blocks of coal lying about, all cut out with pick and so large that it puzzles present day colliers to know how the task of cutting them out was accomplished. The pit in question was sunk in 1654, and closed about 1657.—Ironmonger.

Miller Catalogue Case, Style No. 12.

Miller Catalogue Cabinet Co., Alma Centre, Wis., and 39-41 Cortlandt Street, New York, are placing upon the market the Catalogue Case, illustration of which we present herewith (Fig. 1). It is an economically arranged receptacle for catalogues that appeals to the Hardwaremen throughout the country who have never taken the trouble to have any special place to put these valuable records of an annually extending business. It is designed to supply a want for a drawer cabinet at a reasonable price. The style illustrated embodies nearly all the desirable features neces-

FIG. 1.

sary in an article of this kind. It is made of oak with quartered front, and possesses a fine finish. The sliding shelf in the centre is a very convenient one, and takes up little or no room when not in use. It is 60 inches in height with a width of 29 inches and a depth of 16 inches, containing 12 drawers divided as follows: Five drawers, $25 \times 15 \times 2\frac{1}{2}$ inside; five drawers, $25 \times 15 \times 3\frac{1}{2}$ inside, and two

drawers, 25 x 15 x 5½ inside. Each drawer is divided from front to back into compartments by the means of movable partitions which are shown in Fig. 2. These can be changed at will, and extra partitions and partition holders when desired will be furnished at a slight additional cost. Each drawer pull is provided with a label holder. Extra label holders without drawer pulls are furnished with each cabinet to be placed in centre of drawer front when three compartments are used to a drawer. With each cabinet an outfit of catalogue labels and numbers is furnished. constructed on a plan that has been found the best adapted for catalogue filing purposes. This style of cabinet can also be used for electrotypes, photographs, circulars, etc. Further information regarding this desirable addition to store facilities will be furnished on application to the company.

New England Hardware Dealers' Association.

The anniversary of ladies' night, which has become an annual custom, was observed at the monthly meeting of the New England Hardware Dealers' Association, held at the United States Hotel, Boston, Wednesday, Dec. 11. Once a year the members of this association entertain the ladies at dinner. For this especial occasion the Entertainment Committee-D. Fletcher Barber, Henry M. Saunders and James A. Farless—provided a programme evidencing an enjoyable excellence. The guests assembled in the parlors of the hotel between 5 and 6 p. m., where a reception was held by S. D. Balkam and Mrs. Balkam, representing the association; Lieutenant-Governor John L. Bates, representing the Commonwealth of Massachusetts; Mrs. Katherine Lente Stevenson, president of the Massachusetts W. C. T. U., and Rev. George R. Grose. During the reception and throughout the dinner hour music was furnished by the Ladies' Schubert Orchestra. The Reception Committee-Samuel H. Thompson, Lowell; E. C. W. Bliss, Boston; Henry M. Sanders, Boston; George J. Mulhall, Boston; E. Loring Richards, Boston; L. W. Thompson, Woburn; John B. Hunter, Boston; James P. Mackey, Brookline; Thomas H. Baldwin, Boston-introduced the guests, and at 6 o'clock the company sat down to dinner. At the close of the banquet First Vice-President S. D. Balkam, who presided, delivered an entertaining address of welcome, in connection with which he related a number of humorous stories.

At the close of his address Mr. Balkam introduced Charles E. Adams, of Lowell, who acted as toastmaster. Mr. Adams spoke in part as follows:

"To the ladies who honor and grace the occasion we express our deep appreciation for two reasons: First, that it is gratifying to the members to have the ladies interested in our association, and, also, as woman is man's conscience, it is a good thing for a man always to have his conscience with him.

"Individuality is to-day practically lost, except in isolated instances; aggregate effort is the factor that dominates the commercial and industrial world, but the inevitable result will be a tendency to a closer control by the people."

Mr. Adams then presented Lieutenant-Governor John L. Bates, who extended the greetings of the Commonwealth, and in the course of his address made some pertinent allusions to the Hardware business, referring to the time, not so remote, when the ordinary type of modern hand agricultural implements were first introduced into this country by immigrants, and described how these Hoes and Forks were soon imitated and later improved by the country blacksmiths of Connecticut, and from whom, by a rapid process of evolution, the modern Hardware manufacturer developed.

The next speaker was Rev. George R. Grose, of Newton, whose topic was "The Christian Virtues in Business."

The principal address of the evening was made by Mrs. Stevenson, whose subject was "Twentieth Century Problems." Although the speaker is most prominent in temperance work, her view of the subject adverted to on this occasion was broad and liberal, and thoroughly held the attention of those present.

After the regular programme had been finished, E. J. Neale, of Lowell, read a letter from President George W. Burditt, in which Mr. Burditt expressed his regret at not being able to be present. In referring to the letter and the president's

illness many expressions of sympathy were made, and on motion of Mr. Neale a resolution of sympathy was passed and ordered forwarded to Mr. Burditt.

The next monthly meeting of the association occurs in February, and at that time the annual election of officers will be held. Charles E. Adams, of Lowell, who is president of the Massachusetts State Board of Trade, as well as a member of the New England Hardware Dealers' Association, was unanimously elected to represent the latter organization in the State Board for three years.

In accordance with a provision of the by-laws the acting president announced Samuel H. Thompson, William D. Parlin and Edward A. Loomis as a committee to report at the next meeting a list of names for all offices excepting that of president. This brought the exercises to a close.

The evening was a success in every respect, the attendance being about 75. The banquet in all its appointments and the arrangements in every detail were perfect, for which the several committees are entitled to great praise, among whom ex-President D. Fletcher Barber and Secretary Farless were indefatigable in their efforts.

American Hardware Manufacturers' Association.

A meeting of the Executive Committee of the American Hardware Manufacturers' Association was held in Pittsburgh on Wednesday, Dec. 11, at which many matters of trade importance were entertained and discussed, the meeting being well attended, and considerable interest being manifested in the proceedings. The following is a complete list of officers and committees, with names of companies of which they are representatives:

PRESIDENT,

Fayette R. Plumb, Fayette R. Plumb, Incorporated, Philadelphia, Pa.

VICE-PRESIDENTS,

Samuel M. Nicholson, Nicholson File Co., Providence, R. I. C. S. Van Wagoner, The Van Wagoner Co., Cleveland, O. F. S. Kretsinger, Iowa Farming Tool Co., Fort Madison, Iowa.

SECRETARY-TREASURER,

F. D. Mitchell, Standard Chain Co., Pittsburgh, Pa.

EXECUTIVE COMMITTEE,

Robert Garland (chairman), Standard Chain Co., Pittsburgh, Pa.

Henry B. Lupton, Oliver Iron and Steel Co., Pittsburgh, Pa.

N. A. Gladding, E. C. Atkins & Co., Indianapolis, Ind. W. S. McKinney, McKinney Mfg. Co., Allegheny, Pa. Samuel Disston, Henry Disston & Sons, Philadelphia, Pa. C. E. Adams, Cleveland Hardware Co., Cleveland, O. James P. Kelly, Kelly Axe Mfg. Co., Alexandria, Ind. J. C. Birge, St. Louis Shovel Co., St. Louis, Mo.

MEMBERSHIP COMMITTEE,

William H. Hays (chairman), Iron City Tool Works, Pittsburgh, Pa.

George P. Hart, Stanley Works, New Britain, Conn. Arthur B. Clarke, Old Dominion I. & N. Co., Richmond,

Edward Ingalls, Atha Tool Co., Newark, N. J.

Tom Almgill, Black Diamond File Works, Philadelphia,

D. W. Simpson, Wilcox Mfg. Co., Aurora, Ill.

Edward Kemp, Wabash Screen Door Co., Chicago, Ill.

E. G. Buckwell, Cleveland Twist Drill Co., Cleveland, O.

P. H. Withington, Withington & Cooley Mfg. Co., Jackson, Mich.

The first wire nails made of steel wire were made at Covington, Kentucky, in 1897.

National Sweeper Co.

The majority of manufacturers in packing their goods for shipment seem to be of the opinion that so long as they are packed in a strong box and in such shape that they will reach the dealer in fairly good condition, they have done their duty. The National Sweeper Co. seems to be of an entirely different opinion. They are certainly working along advanced lines and are right at the head of the profession, not only with the goods they are making but with their method of packing for delivery to the dealer. In the accompanying cut we show the way the National "Roller Bearing" Carpet Sweepers are packed. Apparently this

Nature furnishes coal, oil, gas in abundance, while the progressive farmers backing up these towns share in the general prosperity.

It was here the Monongahela Valley Retail Hardware Dealers' Association first came into existence, about one year ago, with George L. Moore, of Brownsville, as president; J. P. Slotterbeck, Fayette City, vice-president; J. F. Frye, secre-

tary; J. H. Bowers, treasurer, both of Charleroi.

The apparent advantage of extending their scope and influence was early recognized, and after some correspondence with the National Retail Hardware Dealers' Association this

meeting was called for a general consultation. About thirty-five dealers responded from different sections of the State, and after Mr. Moore had stated the object of the call the forencon session was entirely given up to discussion of organizing a

MODE OF PACKING "ROLLER BEARING" SWEEPERS.

shipment has just been received by the dealer. This cut shows the Sweepers packed in separate cardboard boxes and how neatly they are packed in the large packing case, as no excelsior or other rubbish is packed in with them to cause a litter when being unpacked, and the handles and printed matter can be laid on top of the boxes without becoming scratched or mussed. The National Sweeper Co. reports that their new dust-proof "Roller Bearing" device is meeting with a reception far beyond their most sanguine expectations. Fall trade has been extremely heavy, and only by running a largely increased force night and day have been able to keep up with the demand. This "Roller Bearing" device has now been on the market long enough to have had a thorough, practical trial, and the National Sweeper Co. has not only demonstrated this to their own satisfaction, but to a large number of well pleased customers. The indications for next year are extremely flattering, and the company is adding to its equipment and making preparations to take care of the heavy business which they will no doubt have.

The Pennsylvania Retail Hardware Dealers' Association.

A meeting of the Monongahela Valley Hardware Dealers' Association was held at the Monongahela House, Pittsburgh, December 12, for the purpose of discussing the advisability of merging the association into a State organization. The Monongahela Valley Association is composed of members in the western part of the State of Pennsylvania, but for some time it has been the aim of the members of the National Association to have a purely State organization as in other States, each State organization being a member of the National organization. This meeting was called for the purpose of considering this question.

Up the Monongahela River from Pittsburgh the banks are jotted with immense factories, in which thousands of workmen are employed. Town after town has sprung into existence until it is almost one solid city for thirty-four miles, there being thirty-seven marked stations within this distance. The Government has aided by dredging and building locks until the largest river boats can pass up and down.

State association. At the afternoon session the roll was called and every dealer present responded favorably to the question, "Will you join a State association, if one is organized?" The following resolution was then introduced by J. H. Bowers and carried without a dissenting vote.

Resolved: That we proceed to organize under the name of the Pennsylvania Hetail Hardware Dealers' Association.

The election of officers resulted as follows: President, Geo. L. Moore, Brownsville. Vice-President, Geo. J. Rudolph, Pittsburgh. Secretary, J. F. Frye, Charleroi.

Treasurer, B. A. Maggini, Braddock.

Executive Committee—A. Q. Casselbery, East End, Pittsburgh; E. E. Lyon, Greensburg; C. N. Savage, California; B. A. Maggini, Braddock; C. O. Shroyer, Dawson.
M. L. Corey, of Argos, Indiana, Secretary of the National

M. L. Corey, of Argos, Indiana, Secretary of the National Association, and Secretary and Treasurer of the Indiana Retail Hardware Dealers' Association, was then introduced, and addressed the meeting, explaining in detail the advantages accruing from the formation of a State organization, which will, in turn, become a member of the National Association. At present the Monongahela Association has about twenty members.

After some discussion a resolution was carried to affiliate with the National. It was also decided to hold another meeting in February, and have one of the National officers present. A vote of thanks was tendered the National Association for assistance rendered. A committee on Constitution and By-Laws and another on Programme and General Arrangements was appointed. The meeting then adjourned until February.

In this gathering active, hustling, intelligent young dealers mingled with the solid, progressive, successful gray headed veterans of the Hardware business, and we predict that Pennsylvania will develop an association that in numbers and influence will rank among the best.

The field is a promising one. It is this class of dealers who are giving National and State Associations loyal support and encouragement and make future success possible.

Pennsylvania dealers are requested to write J. F. Frye, Charleroi, for particulars and programmes of the meeting in February.

Armor plate was first produced in this country by the Bethlehem Iron Company. The first contract was made in 1887, but the first plates actually made were turned out in 1890.

CHANGAN KANAN K

RECENT TRADE PUBLICATIONS.

D. H. Allen & Co., Miamisburg, O. Booklet catalogue of their popular specialty, "The Standorette." Printed on excellent paper, finely illustrated throughout with half-tone engravings, showing the great variety of uses to which this specialty may be put, including a reading stand, card stand, book rest in the office; also for students and professional men; adjusted for invalids, as an easel for artists and a sewing stand; also as a music stand. The number of special features that have made this article popular are well illustrated and described, and are worthy of the attention of the Hardware trade. The many special features to which "The Standorette" is adapted are finely shown on a lithographic hanger distributed by this firm, one of which has been received by us, and which is worthy of a wide distribution.

E. W. Bliss Co., Brooklyn, N. Y., among their numerous catalogues publish a 48-page pamphlet of Drawing Presses and Spinning Lathes, which is as full and complete as is customary with this well-known concern, whose catalogues in the way of machinery are works of art, being filled with excellent half-tone illustrations of the various machines, and including a full description of all their working advantages that give a graphic idea of their utility and in a manner to impress the buyer. Sizes and dimensions are given throughout, and illustrations of the shapes produced by their Spinning Lathes form a part of the contents.

CHICAGO FLEXIBLE SHAFT Co., La Salle Avenue and Ontario Street, Chicago, Ill. Large size pamphlet catalogue, oblong in shape, of 32 pages, having reference to the Chicago Sheep Shearing Machines manufactured by this company, claiming to be the original inventors and manufacturers of practical sheep-shearing machines in the United States. It illustrates in a very complete manner the numerous machines turned out by this company for the purposes of sheep shearing, and gives in a series of illustrations the method and manner of shearing sheep by the aid of machines of the character represented, a number of half tones conveying a perfect idea of sheep shearing methods. Illustrations are also given of the component parts of the machine so they may be ordered by number, and the component parts of the shearing head are given in detail. The latter part of this catalogue is devoted to numerous testimonials from those who have used the appliances to the illustration of which the catalogue is devoted.

NATIONAL PROJECTILE WORKS, Grand Rapids, Mich. Price list of Lubricated Wire Patched Bullets and Smokeless Powder Cartridges, being a pamphlet catalogue, envelope size, sixteen pages, giving the various styles of these goods manufactured by this concern, together with the list prices of the same, illustrations showing the shapes and styles, various directions of how to care for a rifle in using smokeless powder and in loading. Full description is given of the improved methods which have made this product so popular, and the numerous advantages by which the use of the same readily appeals to the practical sportsman or military man. As is explained in the pamphlet, "In the old muzzle-loading gun the bullet was 'patched' with an oiled cloth, as it was pressed into the barrel, and every hunter knows that there is no gun in the world that shot so well and still shoot so well as the old muzzle-loader. But the patch which lubricated the path of the bullet in its flight and wiped all residue behind it, did a bad trick as well. As it was rammed home it carried down to the base of the rifle with it, all the residue

of former shots, and the gun, sooner or later became, what hunters call 'breech-burnt.' As it states, the breech-loader did away with all this, and the present steel wire patched bullets serve as a vehicle for lubrication, also effectively preventing lateral expansion, accomplishing a result heretofore deemed impossible of accomplishment by means of a lubricated jacket.

BALDWIN REFRIGERATOR Co., Burlington, Vt., have recently issued an 88-page catalogue, covering their line of Baldwin Refrigerators for 1902. This includes in its contents the principles of circulation and cleanable features, description of construction and devices for economy of ice that are embodied in the manufacture of the large line of Refrigerators which at the present day forms their product. It also gives fully illustrated all the salient features of their several important lines, such as Porcelain-lined styles, Family Refrigerators, zinc-lined, made from soft wood, and the same made from hard wood; Family Refrigerators that are spruce-lined, hard wood outside; also Ice Boxes and Chests, Sideboard Refrigerators, Grocers' Refrigerators in large variety and special Refrigerators and Coolers for hotel use. These are all handsomely illustrated throughout, the catalogue showing all the various points of difference, list prices accompanying each particular item, together with the dimensions, the code name for telegraphic purposes and the weight of each particular Refrigerator. Every effort is made to have the information conveyed in concrete form so as to make it unnecessary to have any large amount of correspondence when this catalogue is in the dealer's hands. The principles underlying the construction of this well-known and popular line have been adopted after many experiments, which prove every feature to be the most desirable possible for the purpose designed. The manner in which this is explained in the prefatory remarks would assist in making sales very readily, and should be studied thoroughly by the dealer handling such meritorious goods.

EDWIN B. STIMPSON & SON, 31 Spruce Street, New York, who are large manufacturers of machinery and supplies for manufacturers in all lines, have recently issued large circulars indicating in the contents the important special lines to which at this time of the year they desire to make reference. Considerable space is given to the round-hole and hyphenhole Perforating Machines, which form one of their principal productions, and which are very important appliances for the use of manufacturing stationers, lithographers, book-binders and printers. They also exploit in one of their circulars a large number of other machines with the manufacture of which they have long been identified, such as Foot Presses and Dies, Pinking and Scolloping Machines, Creasing Machines for leather work, Embossing Machines for celluloid, paper, cardboard, etc.; Heavy Stapling Machines for fly nets, fastening rope ends, etc., and Eyeletting Machines. In fact, any of the trade in want of any mechanical appliance which the above styles would suggest would probably find it could be supplied by this old and well-known concern.

TRAGLE Mrg. Co., Reading, Pa. Catalogue of Horse Mouth Files and Floats of every description for veterinarians and horsemen; also File Cards, etc. This is a line of goods not largely manufactured by competing concerns, and still a very useful one for the trade to have within reach, including as it does a number of odd appliances not usually found in general catalogues.

PERSONAL SERVICE SERVI

Iwan's Champion Drain Cleaner.

Iwan Bros., Streator, Ill., are the manufacturers of the Champion Concave Adjustable Drain Cleaner, which we illustrate in this article. It has been one of their important specialties for some time, and has already achieved a reputation for perfect work wherever it has been introduced. It is

adjusting them prevents their sagging or coming apart. Another advantage it possesses is that when it is taken down and cleaned it may be nested and put away for further use, this being one of the advantages over the old style of pipe, so that it is claimed with ordinary care it may be made to last for a number of years. It is very readily put together, the thin

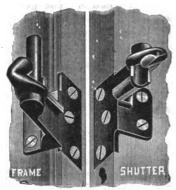

IWAN'S CHAMPION DRAIN CLEANER.

made to push or pull, is very thoroughly constructed of good material, and can be adjusted to any desired angle. The socket head has a double ratchet to which the corresponding shanks are secured by means of a bolt. This greatly adds to the strength of the tool. It is manufactured in five sizes of blade: 3×15 , 4×15 , 5×15 , 6×15 and 7×15 .

Patent Blind and Shutter Hinge.

Baitinger & Berkley Patent Hinge Mfg. Co., St. Louis, Mo., are manufacturing the Patent Blind Hinge, illustration of which is given in this article. It is claimed to possess meritorious points heretofore neglected in the construction of a hinge of this character. By its peculiar construction it is claimed it can be put on in one-half the time of the old style, as it is automatically gauged, and by possessing two

PATENT BLIND AND SHUTTER HINGE.

screw plates a double hold on the frame and shutter is provided for. These two plates being perfect cause the pins of the hinges to be in a perfect line one below the other, thereby avoiding any possibility of the shutter binding, which usually results in the breaking of the hinge and forms one of the prominent weaknesses of the old style hinge. This hinge having a double hold is less liable to be pulled off, being reenforced where similar hinges have usually been found weak. It is claimed by the manufacturers that it is impossible to pull loose. The hinge locks itself when open, so the wind cannot slam the blind.

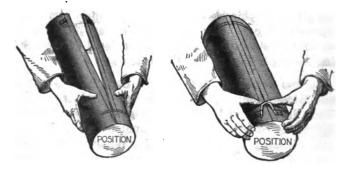

Triumph Adjustable Stove Pipe.

Triumph Adjustable Stove Pipe Mfg. Co., Joliet, Ill., are manufacturing what is claimed to be the most popular Adjustable Stove Pipe on the market. It is extremely simple in its construction so that it may be put up by those unskilled in operations of that character, as it requires no disfiguring wire to hold it in place calculated frequently to mar the ceiling or the walls, and after the joints are put together they are to all appearances one length of pipe. The manner of

TRIUMPH ADJUSTABLE STOVE PIPE.

edge being inserted into the groove at the bead end, the other end being held open. Following it up the two edges are brought together, and the staple inserted, when the operation is complete, and no additional wiring is necessary. Hard-

ware dealers will find this an admirable style of pipe to add to their general supplies for household purposes, as the slightest knowledge of its advantages would induce a trial purchase. The manufacturers claim in their advertisement in another column that the Adjustable Stove Pipe may be put across a room 18 to 20 feet wide without wiring At the same time they will be found solid and tight. They solicit the trade of the retail Hardware and stove dealers, and state they do not sell to department stores, this being one of the important principles underlying their business popularity.

Gem Nail Clipper.

H. C. Cook Co., Ansonia, Conn., are placing on the market the Gem Nail Clipper, and for the purpose for which it is intended it forms an admirable manicuring appliance. It is a clean cutter to the extent that there is no pulling or tearing,

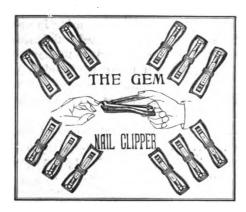

GEM NAIL CLIPPER.

and by its aid the nails may be filed. It is manufactured from a high grade of tool steel, neatly finished in nickel, is less than two inches in length, and having no sharp corners, it may be carried in the pocket without detriment. The jaws are hardened and ground accurately for manicure purposes. The Hardware trade handling this specialty will find it a

good seller, and will appreciate the fact that it comes put up as indicated in the cut herewith, on sample cards holding twelve clippers. They are manufactured in four leading

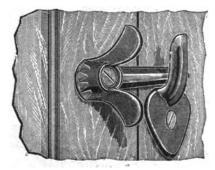

styles: No. 1, finished in nickel, list price of which is \$2 per dozen, being the most popular. The better grades, the list

prices of which run from \$4 to \$7.20, are of a character to suit the most fastidious, having brass, aluminum or sterling silver handles, according to cost.

Fearn Casement Fast.

Columbus Sash Ribbon Co., Columbus, O., are manufacturing the novel device designed for a hinged cellar and attic sash and marketed as the Fearn Casement Fast. This is a very desirable article for the Hardware trade to handle, as it

FEARN CASEMENT FAST.

is inexpensive, supplies a want that every household will recognize at once, and affords the dealer a reasonable profit in its distribution. It is designed to draw the sash or door in place even should it be sprung a quarter of an inch, and will latch even if the door is shrunken or sagged somewhat. Only two screws are required in applying it. If carelessly put on by an unskilled hand, it may be relied upon to accomplish the work required of it. It is applicable to right or left hand, and either top or bottom. It is claimed to be more serviceable than any other possible appliance for hinged sash in cellar, attic or elsewhere, sink and cupboard doors, chicken coop, harness closet or any other similar small doors about the house, barn, etc. They come conveniently packed, one set complete with screws, in an envelope; one dozen set in a neat pasteboard box, and one gross set in a case. The shipping weight is 25 pounds to the gross.

"Centénnial" Rainwater Cut-off.

Cooney & Geiger, Indianapolis, Ind., are the manufacturers of the "Centennial" Rainwater Cut-off, an illustration of which we give herewith. This article has been before the Hardware trade for a number of years, and has met with unqualified approval, and still holds its prominence as a desirable specialty of its kind. It is strong, exceedingly

"CENTENNIAL" RAINWATER CUT-OFF.

durable and quite moderate in price. It is claimed to be the only single cut-off made to fit either corrugated or plain pipe, and which can be used without extra pipe or elbows, making it more readily fitted and saving the tinner extra labor and solder. The style illustrated herewith, which is a sectional view, is Style B for round corrugated galvanized iron pipe. They also manufacture Style A for plain pipe, which is manufactured from either tin or galvanized iron, and made in all sizes from 2 to 6 inches. All sizes below 5 inches are put up in crates of one dozen each, and these are assorted right and left hand wires.

Winn's Adjustable Ball-Bearing Door Holder.

Henry Pearl & Sons, 74 Murray Street, New York, are placing upon the market, through the Hardware trade, Winn's Adjustable Ball-Bearing Door Holder, which is shown in the accompanying illustration, giving the style and manner of its use. It is claimed to hold the heaviest as well as the

WINN'S ADJUSTABLE BALL-BEARING DOOR HOLDER.

lightest door, and meets with approval wherever it has been tried, and should have an extended sale. It is made in bronze with solid rubber tip. It can be used in three ways: To hold the door open, as a bumper to keep the door from striking the wall, and as a burglar proof door fastener. For these purposes it is fastened on the back of the door.

The Sterling White Light Gas Light System.

The Sterling White Light Gas Lamp Co., of Sterling, Ill., are advertising the latest improved system of lighting stores, churches, halls, factories and streets with what is called the Sterling arc system, for which they have patents, and which is claimed to produce a light superior to an electric arc at a very low cost. The indoor light shown in connection herewith (Fig. 1) is the result of many years of experiment, throwing a much softer, steadier and more powerful light than an electric arc. The Sterling arc burner used in connection possesses the smallest number of parts, and has a patent needle cleaner, which is of uniform size the full length; hence never enlarging the gas orifice and

making it practically impossible to clog. The generation takes place between two mantles in a straight rod made entirely of brass and packed with copper cable, which performs a double duty, acting as a filter and a sub-heater. This lamp will generate whether turned low or on full force, and in all degrees of temperature, both inside and outside. In this system the gasoline is conveyed from a tank throughout the entire building through a flexible hollow copper wire, not to exceed 1-8 inch in outside diameter, and can be concealed with the same facility as electric wires, and as many lights as may be desired can be supplied from the same tank. The tank may be in any convenient place. The Sterling Arc will burn any gasoline that will burn in any stove or in any other lamp, but experience has taught all users that "74 gravity" is the best for the purpose, even in a stove. The lamps are shipped trimmed complete, as shown in the cuts, and explicit instructions are sent as to installing and operating system. The company manufactures an especially strong mantle for use in their system, as the brilliancy of light depends considerably on the quality of the mantle.

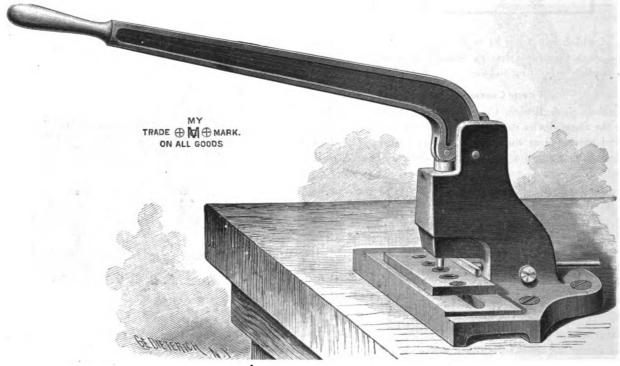

Morrill's New Bench Punch.

Charles Morrill, 277 Broadway, New York, is placing upon the market, through the Hardware and Supply trade, the improved Bench Punch, illustration of which we present herewith. This has been before the trade some little time, but with its present improvements it becomes a tool of great value. This Punch is provided with interchangeable dies and plungers, varying in size from ½ to ¾ inch in diameter, the reguof unparalleled activity and prosperity. In all branches of the iron and steel industries manufacturers are proceeding on the supposition that orders are to continue or to increase. They are accordingly adding a little here and there to their facilities, buying some needed machinery, taking on a few more men, making some desired improvements and contracting for their material on the same broad scale. And when the shrewdness of the average American business man is considered, the sum total of this almost universal predisposition towards enlargement and expansion of trade carries with it the weight of profound conviction. Representing, as it does, the keenest business sense, it is a powerful argument in favor of a continuance of robust activity.

This very confidence, with its resultant activity, is making for the continued prosperity to a most notable degree. It stimulates the whole line of initial production and by the placing of heavy orders guarantees the prolongation of progressive activity.

One recent and local instance of this go-aheaditiveness is presented in the business which is pouring in upon the Chicago architects. The latter are flooded with business and one of them remarks that all signs point to the next summer as a season of remarkable activity in the building trades. He says that it is open to question whether all the business houses and business blocks that are wanted can be erected, so great is the present inquiry.

It would seem from the present temper of the trade that nothing less than an earthquake could shake it from its aggressive and persistent climbing tendencies.—Iron and Steel.

MORRILL'S NEW BENCH PUNCH.

lar equipment being ½, ¼ and ¾ inch punches, although any intermediate size can be furnished. The tool is manufactured from the best quality of iron and steel and is designed by the manufacturer for the purpose of punching sheet metals, cardboard, paper and other fibrous material. It is provided with a gauge secured by a set screw for the purpose of regulating the space between the edge and the dies, it being intended that the whole structure should be bolted to a bench or table when in use. The plunger is controlled by a lever handle 21 inches in length, making it capable of doing unusually good work for a mechanical appliance of this character.

A Unanimous Opinion About 1902.

One of the remarkable features of the business of to-day is the widespread confidence that 1902 is to be another year

Dehorned Beeves.

The Armour Co. pay more for dehorned beeves than for those with horns. They find that the dehorned cattle ship better and consequently dress better than the others. Where the animals horn each other a bruise is left on both the hide and the flesh. The tanner pays less for the hide, the butcher less for the dressed carcass. It is remarkable how rapidly the practice of dehorning has grown. One has only to visit the Union Stock Yards at Chicago to realize this. Cattle feeders have found that it pays to dehorn—pays in four or five ways. Of course one should be careful to use a dehorner possessing a deserved reputation, as that advertised in this issue by H. H. Brown Mfg. Co. It has been tried for years and the thousands using it endorse its many merits.

REVIEW OF THE MARKETS.

wire Nails: The condition of the Wire Nail market is about as previously reported. Quotations have been made by plants outside the combination at lower figures than have generally prevailed. Some of these quotations have been met, in order to keep large buyers secure, providing such prices were made by plants which could supply full assortments of sizes, but general quotations still continue irregular, and buying is not of a steady or confident character. What is considered a low price for regular trade would be \$2.10 to \$2.15 for ordinary requirements f. o. b. mill, the desire being to keep the business on a conservative basis with no wish to speculate on the future trend in prices. Nominal quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

New York. The local demand is by no means of an eager character, having become quite light by comparison with the previous fortnight. Stocks are not heavy, and some sizes are reported scarce, the car famine having affected full deliveries. The following may be said to represent the market:

Cut Nails: While with the present limited demand a change in price of Cut Nails is scarcely expected, still as prices by comparison make the difference on Wire Nails so much in their favor, it is thought a change after January first is more than likely. The market is held firm under a light demand, at prices previously quoted, which are as follows: f. o. b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. discount for cash in ten days:

In k	ees t	han	carl	oad	lot	B	 	 	• . • • • • • • •	\$ 2.10
Carl	oad	lots					 	 	• • • • • • •	2.05

New York. The sales of Cut Nails being confined to those who prefer them to Wire Nails for various needs, the sale has not been affected by the relatively low price quoted on Wire Nails by comparison, the demand being limited. Prices are held at quotations previously given.

TO JODGET IT	carroad tota on dock	
**	less than carload lots on dock	2.28
Mmell into tro	om store	9 25

Barb Wire: Business at this season is becoming of the usual restricted volume, and the nominal quotations indicate nothing of a surprising character. Slight concessions are occasionally made when specifications are of a size to make such a course desirable. Quotations are as follows: f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in ten days:

To jobbers in carload lots, Painted\$	2.60
" Galvanised	2.90
" less than carload lots, Painted " Galvanized	2.65
" Galvanized	2.95
To retailers in carload lots, Painted	2.70
" Gaivanized	3.00
" less than carload lots, Painted	2.80
" Galvanized	3.10

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden is 10 cents per 100 pounds higher than the prices above named:

Plain Wire: The demands of the manufacturers furnish the strength of the business being done. No doubt desirable specifications are welcomed, and some slight concessions are made in order to obtain the specifications for next season's requirements. Nominally the market remains as

heretofore quoted. F. o. b. Pittsburgh, terms 60 days, or 2 per cent discount for cash in ten days:

ВĽ	cent	discount for cash in ten days.	
	To	jobbers in carload lots\$2.25 " less than carload lots\$2.30	\$2.65 2.70
		" less than carload lots 2.80	2.70
	To	retailers in carlots	2.75
		" less than carload lots 2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the advances indicated in the following table:

Plain F	ence Wir	e Adva	DC es	(Cat	ch	Wel	ghts) Galvi	inized.

18		64 .	44	44	• • •	• • •	1.00	44

Copper Products: The irregular prices at which ingot copper has been marketed during the past fortnight, have made imminent prices of a fluctuating character from day to day. Buying has been checked, as every change in quotations it was feared would be lower than previously prevailed. The market prices on Copper Products are handled conservatively for the benefit of the general trade, giving opportunities for disposing of stocks with but little or no loss wherever practicable. But few changes will be made until the market becomes settled, and in all probability about the time of the January meeting of manufacturers the price of ingot copper will be a fixed one, enabling the manufacturers of copper and brass products to name quotations that will require little or no immediate revision.

Cordage: The Rope market remains without change. We continue the quotations named previously, which represent the market.

Liasced Oil: The following quotations are the latest announced by the Dean Linseed Oil Co.:

tity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw. Calcutta Oil, 85 cents per gallon.

THE PITTSBURGH TRADE.

One of the quickest floods on record caught Pittsburgh napping last Sunday, and entailed considerable loss and work to coal men, manufacturers and merchants in the low district. These floods have been more frequent than usual during the last year.

Business keeps up well, notwithstanding annoyance and delay by weather and railroads, and the outlook for 1902 is excellent.

We are glad to read of the conference between prominent men on both sides of the capital and labor problem, and the kindly feeling which prevailed. Large views and intelligence on the part of the conferees will go a long way toward solving this question, so important to the continued commercial progress of our nation.

At this season, when "good will to men" prevails in the minds of all, we hope the same sentiment will enable capital and labor to agree as to the best interest of both.

LOGAN-GREGG HARDWARE Co.

THE CLEVELAND TRADE.

Judging by the orders received, no jobber would think this was December. We are to have no dull month in 1901, and it will be difficult to find time to invoice. Trade holding up so late will prevent manufacturers accumulating stock for Spring trade. This, with the delay caused by the lack of material, is likely to make increased annoyance by delay in filling Spring orders.

Sales were very much reduced last year by orders not being filled until the season was over.

Nothing but unexpected disaster can prevent an increased demand for goods for 1902. We have been so accustomed to have depression follow activity that an apprehension exists that prices may seriously decline, but the basis of prosperity is too solid to permit speculation in stocks on exchanges to destroy it.

Consumers want the goods and are able to pay for what they want, even if speculators are short on their margins. Our present system makes it possible for a few men to lock up our circulating medium for speculative purposes, and panics in Wall Street will continue until Congress provides for a currency that can adjust itself to conditions, but if the bulls and bears destroy each other the country will still live and will eventually make provision to protect its business from such injury.

Every indication promises an active business for 1902 that will result in much delay in many lines in getting goods. To have goods when they are wanted is the very best advertisement possible. The good business man this year will secure early shipments.

THE LOCKWOOD-TAYLOR HARDWARE Co.

THE DAVENPORT TRADE.

The prolonged drought continues, and there is no water in the creeks, brooks or ponds to freeze, hence no skating except on the rivers. The skate trade is very much abbreviated thereby. A few hand sleds are being sold for Christmas presents, but there is no snow as yet to justify purchases of them for practical use. Sleighs and sleigh bells are little known except in history in this neighborhood. Sales for the year have been large, have never been excelled and rarely equalled in amount, but a constant shrinking of values estimated at an average of ten per cent. since last inventory, together with the excessive expense account and the narrowing of margin of profits, will show a disappointing and unsatisfactory condition when the balance sheets of the year are made. When the results of business for 1901 are known an earnest, if not spoken wish, will be made, that the contemplated two hundred million Hardware combine would hurry up and get organized.

SICKELS, PRESTON & NUTTING Co.

THE MINNEAPOLIS TRADE.

The year 1901 will soon be ancient history. We think the Hardware trade in the Northwest as a whole has found it a fairly satisfactory year. This is particularly true of the jobbers. Do not think the local retailers will find it so satisfactory when they come to figure up their profits. There have been quite a number of changes in the trade here during the year.

The J. H. Thompson Hardware Co. were about ready to do business when, on account of illness, Mr. Thompson felt obliged to close up. He was succeeded by the Nelson & Bouquet Hardware Co., who came here from Owatonua, where they were doing a jobbing and retail business, Mr. Thompson purchasing their retail business at that point.

In July the T. M. Roberts Supply Co. went into the hands of receivers. The business was afterwards sold out to some of the large creditors, who are now continuing under the style of Ingram & Mann. It seems that they are paying particular attention to disposing of the stock on hand. What course they will pursue in future is doubtful, but we should think quite likely that the business, in some form or other, will be continued.

The Gregg-Seager Hardware Co., composed of a number of former employes of the Minneapolis Iron Store Co., was organized and are doing a heavy Hardware business. The Williams Hardware Co., heavy Hardware, have moved into new and larger quarters and are apparently doing a very successful business. There was a change in the Gardner-Warner Hardware Co., Mr. Warner selling out his interest to Mr. Gardner, and now they are two separate establishments.

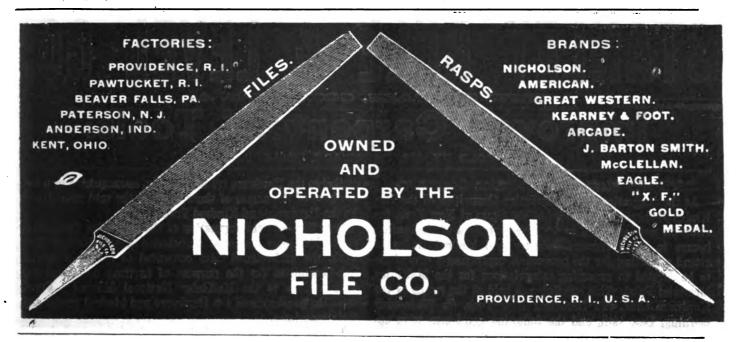

G. P. Derickson has moved into larger quarters on Washington Avenue North, is extending his jobbing business in the furniture, upholstering and manufacturing supply line, while the business of the Stoddard Hardware Co., that occupied premises on Washington Avenue South with Mr. Derickson, is advertised for sale. Mr. Stoddard's business is largely in the mechanics' tool line. Peter Faber has filed a petition in bankruptcy. Janney, Semple, Hill & Co. have purchased property in the rear of their large wholesale establishment on Second Street and First Avenue South, and are erecting a large addition, made necessary by their large and increasing business.

Building operations have been very large here and continued up till now; in fact, even during the severe weather that we are passing through at present there is a great deal of work going on. It seems rather strange to see a large force of bricklayers laying brick outdoors, with the temperature ten to twenty degrees below zero, but there is a large building going up on upper Nicollet Avenue, where this sight can be seen every day.

Lumber prices are high and recently a further advance has been made, but the demand continues good. There is no question but the white pine tributary to Minneapolis is getting very scarce and apparently owners are beginning to appreciate that fact. Last season there were more or less logs hauled here from the woods by rail. The result was so satisfactory that we understand arrangements have already been made for over 100,000,000 feet to be hauled the coming season. One mill here wishes to try the experiment of sawing through the Winter, and applied to the city government for permission to extend railroad tracks across some streets in order that the logs could be dumped into their pond. They propose keeping their pond clear of ice with exhaust steam, which they can have plenty of, as the item of fuel to a saw mill cuts no figure.

Manufacturers in different lines have been troubled seriously with shortage of cars. Railroads have been adding to their equipment, but not fast enough to keep pace with the demands of the increased business. Some of our flour mills and elevators have been obliged to shut down on account of

not being able to get cars to move the wheat. Some other flour mills are closed on account of dull business, this being the time when it is expected in this line. There has been somewhat of a flurry in wheat recently, but it seems to have quieted down, but mill feeds, bran, shorts, etc., are very high. The demand for everything of this nature in the Southwest is phenomenal. The price of wheat and flour is exceedingly low compared with other grains. Many people seem to think there will be a marked advance later, but the price, in our opinion, will be regulated very largely by the European demand, as apparently there is wheat enough for home consumption and to spare.

Holiday business seems to be good, but there is no doubt the severe weather is keeping people at home to quite an extent. There will be a great rush within the next few days. An owner of one of the large department stores told the writer yesterday that if the weather became moderate they would immediately put in several hundred additional clerks.

Our experience with holiday business has been satisfactory since we have moved up into our new location. People are buying useful articles, and there are a great many things in the Hardware line that a concern located favorably can handle to advantage. We don't pretend to buy anything particularly and only for holiday trade, but simply have a larger line of certain regular standard goods that we carry in stock the year around, many of these articles, of course, selling to much better advantage and more freely at this time of the year.

We are doing very satisfactory business in chafing dishes and accessories, 5 o'clock teas, nickel-plated bakers, tea and coffee pots, pocket knives, table cutlery, carvers, etc. Have made quite a specialty of tool chests this year, have been most successful in those that we had made here and fitted up ourselves with first quality tools.

As we fear we have already occupied too much space, we wish you and the readers of *Hardware* a very Merry Christmas and happy and prosperous New Year.

W. K. Morison & Co.

THE ST. PAUL TRADE.

With the holidays in sight and a temperature of 10 to 30 degrees below zero during the last week, we should expect a quiet business, and yet we are surprised every day by the number of orders we are receiving; the general conditions are good and a little cold weather does not scare our people to any extent, still for some weeks after Christmas we expect but little business.

The market here is generally firm, though an uneasy feeling exists in regard to Spring price on nails and wire, and

all orders taken must be guaranteed up to date of shipment.

C. W. HACKETT HARDWARE Co.

THE SAN FRANCISCO TRADE.

According to the voice of the trade in these closing days of 1901, the Pacific Coast is enjoying one of the best years in its history, as far as outward shipments of its field products go. There seems hardly anything produced in California or its two northern neighbors that is not in good demand, either for the East or foreign countries.

From the viewpoint of representative San Francisco Hardwaremen in the jobbing trade, this happy condition was not overlooked in the reach of statesman oratory they severally exemplified a few evenings ago while guests at the superb second annual banquet of the San Francisco and Oakland Retail Hardware Dealers' Association, given in the city's handsomest banquet hall, known to the epicurean world as S. Constantini's Maison Tortoni.

The topics given the several speakers by Toastmaster Armstrong, of Philpot & Armstrong, excepting in the case of Mr. Miller, of Miller, Sloss & Scott, whose subject was "The Trade Outlook for 1902," did not embrace a reach into the abundant present and prospective harvest seasons brought about through the agency work of Prosperity that the revered President McKinley promoted; yet the poet-license the other toast speakers indulged in by reaching beyond the scope of their several topics to relate that the Coast's retail Hardware Dealers demand for iron and steel and every other article of merchandise appertaining to their business repertory was unabated, and that never before was there so much forward business booked as at present, was so very happily done that the license taken was applauded so vigorously that the gorgeous decoration on the center table, consisting of a huge bouquet of picks, shovels, galvanized wire netting, chrysanthemums and bunches of red berries, jingled with the echo of applause.

The toasts given these speakers, additional to Mr. Miller's, were:

"In What Way can Jobbers and Retailers be Benefited by Co-operative Work?" responded to by Mr. Wheeler, of W. W. Montague & Co.

"Present Commercial Methods and How to Conform to Them," responded to by Mr. Rulofson, of Baker & Hamilton. "The Value of Association to the Hardware Dealer," responded to by C. A. Marwedel.

"Work of the California State Association of Retail Hardware Dealers," responded to by Harry Gracey, the secretary.
"Is the Hardware Trade Conducive to Speech Making?" responded to by Mr. Curtiss of Dunham, Carrigan & Hayden Co.

INDUSTRIAL PRESS ASSOCIATION.

STANLEY RULE & LEVEL CO.

NEW BRITAIN, CONN., U. S. A.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

McKinley Memorial Association Committee.

At the suggestion of the Executive Committee of the Mc-Kinley Memorial Association of the State of New York, invitations were extended to the representatives of the leading houses in the Hardware industry and kindred trades to attend a meeting for the purpose of organizing a committee to be devoted to procuring subscriptions for the McKinley Memorial Fund. This meeting was held at the rooms of the Hardware Club, 253 Broadway New York, on Wednesday morning, Dec. 12th, and the following gentlemen were appointed a committee for that purpose:

William Bishop, of P. & F. Corbin, New York.

Terence F. Curley, of J. Curley & Bro.

U. T. Hungerford, of U. T. Hungerford Brass & Copper Co.

R. R. Williams, of Iron Age.

Webster R. Walkley, of Peck, Stow & Wilcox Co.

Frederick Stellwagon, of Reading Hardware Co.

George H. Sargent, of Sargent & Co.

George J. Laighton, of Russell & Erwin Mfg. Co.

J. Walter Spalding, of A. G. Spalding & Bros.

Peter McCartee, of Stanley Works.

J. Leonard Varick, of Union Nut & Bolt Co.

W. M. Taussig, of Wiebusch & Hilger, Ltd.

Edward C. Van Glahn, of White, Van Glahn & Co.

Henry R. Towne, of Yale & Towne Mfg. Co.

Thomas G. Duncan, of Brooklyn, N. Y.

The purposes of the association, as defined in its certificate of incorporation, are the erection and maintenance at Canton, Ohio, of a suitable memorial to the late President, and raising the necessary funds for said purposes; and after fully providing therefor, the surplus of such funds, if any, to be devoted to such memorial as may be provided for the late President at the National Capital. The memorial will be erected at Canton, that city having been his home throughout his public life and selected by him as his finar resting place.

The memorial is to be, in the highest sense, the sincere expression of all the people of the country of their love for President McKinley and of their admiration for the qualities expressed so eminently in his life and deeds.

It is the purpose to have the offerings of the people voluntary, with a full opportunity to all to contribute.

The co-operation of the Governors and officers of the States and municipalities of the United States, and all religious, educational, labor, civic, patriotic, fraternal, benevolent, and other organizations is invited.

All public officials, organized bodies, and the press are requested to take immediate steps to secure, at the earliest possible time, a full response to this appeal. The Association looks to the press of the country to lend its efficient aid to the collection and forwarding of subscriptions.

The Association will prepare and distribute to all donors to the fund a souvenir certificate which will be worthy of preservation, as evidence of the holder's participation in the work.

It is hoped that the response of the people will be so liberal that a memorial may be erected which will fittingly honor the memory of our martyred President, and emphasize their loyalty to our institutions, and their abhorrence of that spirit of lawlessness which inspired the assault upon his life.

The following letter, with circulars enclosed, has been

mailed to the Hardware trade generally, accompanied by a list as above of the names of those forming the said committee: To the Hardware and Kindred Trades:

Dear Sirs—At the suggestion of the Executive Committee of the McKinley Memorial Association of the State of New York, the undersigned have consented to act as a special Sub-Committee for the purpose of inviting and receiving contributions to the McKinley National Memorial Fund, from the gentlemen of the Hardware and kindred trades and their associates.

The objects of the Association are clearly set forth in the circular letter enclosed herewith.

Subscription blanks are enclosed for your kind consideration with the request to return same, together with the amount of your donation, to Charles A. Hauck, treasurer, 4 and 6 Warren Street, New York.

All contributions received will be entered upon the subscription list by the treasurer.

Yours respectfully.

THOMAS F. KEATING, Chairman.

It is anticipated that the response will be a liberal one, and that the labors of the Committee will be largely lightened by prompt attention being given to the above letter.

A Prospect of Industrial Harmony.

On Monday and Tuesday, the 16th and 17th inst., one of the most important and far-reaching movements affecting the industrial life of the nation was inaugurated in the rooms of the Board of Trade and Transportation in New York City. It was in the form of a conference between those representing capital and labor, and was held under the happiest auspices. The two hundred people who participated in the proceedings included the heads of industrial organizations in which many millions of capital are invested, and whose fervent wish could have conceived no happier movement for the conservation of industrial peace. There were also among those present many of the active leaders of labor organizations, who in their official capacity represented thousands of workingmen.

The meeting was called to order by Oscar S. Straus, ex-Minister to Turkey, Bishop Potter of New York being the first speaker, and who was profoundly convinced that nothing more important had ever occurred in the history of the great social and industrial problem. He stated that in his judgment this bringing together the great forces of industrial activity in a comity of intercourse and conference was the largest step in the direction of a solution of that problem of capital and labor, which was the constant subject of industrial anxiety.

Senator Hanna of Ohio, who followed, placed himself on record at once as one of the most earnest friends of organized labor. He felt that to bring capital and labor into closer relations of confidence and reliance would prove one of the grandest things worthy of accomplishment. He expressed himself as preferring the credit of bringing about a consummation of this character than of occupying the position of President of the United States.

The most harmonious spirit seemed to prevail, the general belief being prevalent that arbitration would provide a remedy for all industrial ills, if intelligent effort was properly

directed. Among others who made speeches having the objects of the conference at heart was Archbishop Ireland of St. Paul, Secretary John Phillips of the Hatters' Union, Representative Donnelly of the Bricklayers' Union, James Ryan of the Photo-Engravers' Union and Marcus Marks of the Clothing Makers' Union, all of whom founded their remarks on the belief that disputes between men in their trades and their employers could almost invariably be settled by arbitration.

William H. Pfahler, of Philadelphia, president of the National Association of Stove Manufacturers, made a convincing address in which he described the experience of the association formed by the employers in the stove trade. Mr. Pfahler said:

"We organized an association at that time—and it was a great many years ago—for defense. We began that association to defend ourselves against the aggressions of the Iron Molders' Union. We worked along those lines two or three years, fighting each issue as it rose. But we very soon learned that our point was wrong; that our approach to the question was wrong, and we changed the policy of that association to be one of negotiation, to be an association which should, from our standpoint, show the men who were in our employ the condition of affairs from their standpoint, learn the condition of their lives and industries, and to co-operate upon a line which would produce the best results.

"There has not been a strike in the stove industry. Why? We have approached that subject through representatives of each body, and if there is anything valuable in this country to-day it is the representative system, so long as these representatives are well qualified men to carry out their purposes."

President Charles M. Schwab of the United States Steel Corporation, who was one of the important speakers, expressed his decided opposition to labor unions as at present organized. In giving his reasons for this opinion, Mr. Schwab said:

"That labor unions will never succeed, as trusts never succeeded, by attempts to restrict the output or attempts to put any restriction upon trade in general.

"These great trusts that are formed in a business way to control the output of any commodity, to raise its price, they all have failed and all will fail. A trust will succeed where there are motives of consolidation for economy's sake and for regulating trade generally.

"And the laborer must take a similar position. Labor must not restrict the output. That is a fundamental principle. And I am sorry to say that every labor organization with which I have had experience in the past has had as its foundation the restriction of the output."

He said in addition:

"I should not be opposed to organized labor if organized on correct principles. It is a mistaken idea to suppose that manufacturers are opposed to labor organizations, per se. They are opposed to them as they do exist; not to labor organizations who keep their contracts, not to labor organizations who will not restrict the output, not to labor organizations who have the good of the trade they represent at heart."

A standing committee was appointed at the meeting on Tuesday to take the subject of labor troubles under further consideration, and formulate a plan to make strikes unnecessary in the future. This committee is to be composed of 12 representatives of organized capital, 12 of organized labor and 12 to represent the general public. The following is the committee appointed by Chairman Straus:

ON BEHALF OF THE PUBLIC.

Grover Cleveland.
Cornelius N. Bliss.
Charles Francis Adams.
Archbishop John Ireland.
Bishop Henry C. Potter.

Charles W. Eliot, president Harvard University. Franklin McVeagh, Chicago.

James H. Eckels.

John J. McCook.

John G. Milburn, Buffalo.

Charles J. Bonaparte, Baltimore.

Oscar S. Straus.

Ralph M. Easley.

AS REPRESENTATIVES OF ORGANIZED LABOR.

Samuel Gompers, president of the American Federation of Labor. John Mitchell, president of the United Mine Workers.

F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen.

T. J. Shaffer, president of the Amalgamated Association of Iron, Steel and Tin Workers.

James Duncan, president of the Granite Cutters' Association.

Daniel J. Keefe, president of the International Association of 'Longshoremen.

Martin Fox, president of the National Iron Molders' Union.

James E. Lynch, president of the International Typographical
Union.

Edward E. Clarke, Grand Conductor, Brotherhood of Railway Conductors.

Henry White, secretary of the Garment Workers of America.

Walter MacArthur, editor of the Coast Seamon's Journal, San
Francisco.

James O'Connell, president of the International Association of Machinists.

REPRESENTATIVE EMPLOYERS.

Senator Marcus A. Hanna, Cleveland.

Charles M. Schwab, president of the United States Steel Corporation.

S. R. Callaway, American Locomotive Works.

Charles Moore, president National Tool Co.

J. D. Rockefeller, Jr.

H. H. Vreeland, Metropolitan Street Railway Co.

Lewis Nixon, Crescent Shipyard, Elizabethport, N. J.

James A. Chambers, president American Glass Co., Pittsburgh, Pa.

William H. Pfahler, president National Association Stove Manufacturers, Philadelphia, Pa.

E. P. Ripley, president Atchison, Topeka & Sant.. Fe Railway Co. Marcus M. Marks, president National Association Clothing Manufacturers.

J. Kruttschnitt, president of Southern Pacific Railway Co.

A sub-committee was appointed to consider and formulatesuggestions for plan and scope of this permanent committee. The general sentiment of the meeting on both Monday and Tuesday seemed to be that a peaceable way out of labor difficulties could always be found by amicable and free discussion of the questions at issue between employers and their employes, and that these ends could be best served by the existence of a standing committee in which both sides should be fairly represented.

E. D. Durand of Washington, secretary of the National Industrial Commission, was among the speakers on Tuesday who cordially indorsed the plan of a committee of arbitration and conciliation, and characterized it as the most practical method of obviating labor troubles. Grand Master Sargent of the Locomotive Firemen also spoke in a similar vein, from the point of view of labor, and was followed by several other labor leaders, and also Lewis Nixon, the shipbuilder of Elizabethport, N. J. President Mitchell of the Mine Workers said that he had never known a strike which could not have been avoided if the employers and men had been permitted to meet in conference, and a similar opinion was expressed by Samuel Gompers.

On Wednesday, at the initial meeting of the standing committee, Senator Hanna was elected chairman, Samuel Gompers and Oscar Straus vice-chairmen; Charles A. Moore, treasurer, and Ralph M. Easley, secretary. By-laws will be adopted and the general plan of action will be decided upon at a further meeting of the general committee to be held in the latter part of January.

Central Falls, R. I.—The business of the company's interests and property has been merged into that of the Burden Wire & Supply Co., and hereafter all the manufacturing will be done in that city.

Fort Wayne, Ind.—The sale is announced of the Fleming Mfg. Co., makers of road scrapers, snow plows, etc., to the Indiana Road Machine Co. for \$52,500.

Recent Fires.

Brooklyn, N. Y.—The saw factory of Joshua Oldham & Son, 112 to 130 Twentysixth Street, was completely destroyed by fire recently. Loss, \$75,000.

Crawfordsville, Ind.—This city sustained the heaviest fire loss in her history when the new plant of the Crawfordsville Wire and Nail Co. was wrecked. Property worth considerably over \$100,000 was destroyed in less than an hour. It was thought for a while that the loss would absorb the capital stock of the company, it having in use borrowed money to the sum of \$55,000 and carrying only \$25,000 insurance. It was surance and book accounts would more than pay the indebtedness, leaving the plant with its valuable salvage for the company.

Lincoln, N. J.-A fire started in the storage rooms of the Franklin Enamel Works, at this place, recently. Despite the heroic efforts of the fire department, the building was destroyed before the fire could be extinguished.

McGowan, Tenn.-F. H. Clark's saw and ax-handle factory burned here recently. The loss is about \$2,000; no insurance.

New York, N. Y.—The plant of the National Enameling & Stamping Co., in Williamsburg, occupying nearly an entire block, has been totally destroyed by fire. No South Bend, Ind.—Oliver Chilled Plow accurate estimate of the loss can be made **~-** \$500,000.

> 'ander, Wis .- The Wabash Screen nt was entirely destroyed by everal residences near the The total loss is \$400,-"rance.
